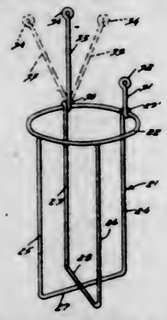
1. The method of producing an all textile stretchable yarn having controlled stretch properties, which includes the steps of drawing a crepe twist yarn about a support so that it bends sharply about the support and then advancing it to a revolving spindle that further twists the yarn and forms successive coils between this spindle and support, then advancing this twisted and coiled yarn a second time and twisting it in the opposite direction to increase the diameter and decrease the number of the coils to make the yarn easier to stretch.

2,451,920
CIGAR WRAPPER CUTTING AND TRANSFER MECHANISM
Sigurd Clausen, New York, N. Y., assignor to International Cigar Machinery Company, a corporation of New Jersey
Application November 12, 1943, Serial No. 509,992
8 Claims. (Cl. 131—99)

1. In a cigar machine, the combination with a suction cutting bed including a die adapted to cut a section from leaf tobacco spread on the die, said bed having a portion outside of and surrounding said die, of a hollow carrier having a perforated face adapted to support leaf tobacco spread thereon, mechanism for moving said carrier from one position at which the leaf tobacco is spread on its perforated face, to an inverted position at which the leaf tobacco is deposited on said die and held by the perforated face of said carrier against the portion of said bed outside of said die, means for creating suction in said carrier and thereby causing suctional adhesion of the leaf tobacco to the perforated face thereof while it is transporting the same to the die, and devices for terminating the suction in said carrier when the leaf tobacco is positioned on said die and applying suction to said bed while the leaf tobacco is held thereagainst by the perforated face of said carrier to cause adhesion of the leaf tobacco to said bed.

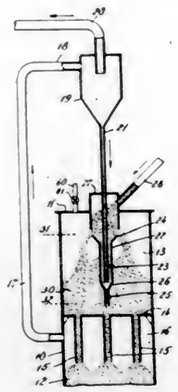
2,451,921
ROTARY AMPLIFIER
Willard G. Cook, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1944, Serial No. 565,816
10 Claims. (Cl. 322—62)



1. An amplifying generator comprising an armature and a plurality of field structures each having poles of different respective polarities for passing magnetic flux through said armature, said structures being displaced relative to each other, so that the magnetic flux path in each of them is substantially separate from that in said other structures, separate field windings on said structures respectively, and a pair of brushes pertaining to one of said field structures and connected with said field winding of another structure for obtaining plural-stage amplification.

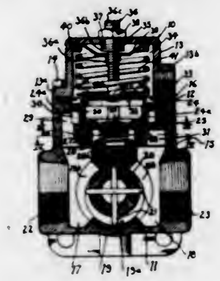
2,451,922
COAL DRILL AND CHUCK
Andrew J. Cox, Falls Mills, Va., assignor of one-half to Renick J. Cox, Bluefield, Va.
Application June 14, 1945, Serial No. 599,408
1 Claim. (Cl. 279—103)

In a device of the character described, the provision of a drill chuck, a pair of semispherical rivets diametrically opposed in the chuck, a drill and a pair of slightly hooked lugs formed on the drill and adapted to engage with the rivets when withdrawing the drill from a hole.



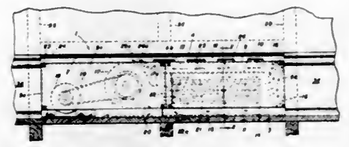
2,451,923
BOTTLEHOLDER
Richard A. Cox, Gainesville, and Lewis D. Hartsfield, Lake City, Fla.
Application February 2, 1946, Serial No. 645,035
1 Claim. (Cl. 248—311)

A bottle holder comprising a wire frame having a portion thereof forming a loop with the end portions of said loop being shaped to form crossed U-shaped leg members having the terminal ends of said wire coiled about said loop and extending above the same terminating in a supporting eye.



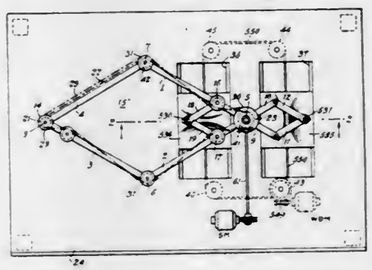
2,451,924
APPARATUS FOR CONTACTING SOLIDS WITH GASEOUS REACTANTS
John A. Crowley, Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application July 13, 1944, Serial No. 544,782
8 Claims. (Cl. 23—288)

1. Apparatus for transferring a particle form solid from a first vessel to a second vessel therebelow maintained under different pressures which comprises, said first vessel, said second vessel located beneath said first named vessel, a vertically arranged funnel-forming member in the upper part of said second vessel, the upper portion of said funnel-forming member being tubular along at least a major part of its length and the lower portion of said funnel-forming member comprising a tubular outlet of substantially less diameter than said upper portion, a conduit extending from the bottom of said first vessel into the tubular upper portion of said funnel-forming



member and terminating on its open unrestricted lower end a substantial distance below the upper end of said funnel-forming member but above said tubular outlet, said conduit being of substantially less diameter than said tubular upper portion of said funnel-forming member and being substantially concentric therewith, and separate passage defining means arranged to guide additional contact material into the upper end of said funnel-forming member.

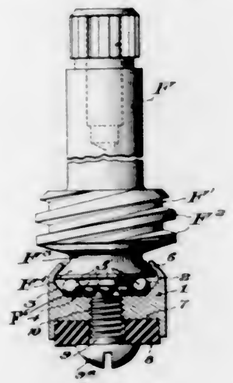
2,451,925
PUMP VALVE CONSTRUCTION
Russell R. Curtis, Dayton, Ohio, assignor to Curtis Pump Company, Dayton, Ohio, a corporation of Ohio
Application March 26, 1943, Serial No. 480,647
4 Claims. (Cl. 277—45)



4. A one piece combined relief valve and bypass valve seat which comprises an annular wall, upstanding legs extending from one face of said wall at spaced intervals from the periphery of said face, an annular flange surrounding said legs in spaced relation from said wall, said annular flange having an external guide surface, a plurality of legs depending from the opposite face of said wall at spaced intervals intermediate the inner and outer peripheral edges of the wall, said depending legs having external guide surfaces at their extremities, said wall defining a valve seat inside of said depending legs and a valve seating face surrounding said depending legs, said upstanding legs having recesses in their end faces thereof bottomed by supporting shoulders, and an inverted cup having the side wall thereof snugly seated in said recesses and supported on said shoulders, said cup having an end wall closing one end of the valve.

2,451,926
ELECTRIC AIR HEATER
Milton R. Dallin, Salt Lake City, Utah
Application January 30, 1946, Serial No. 644,268
11 Claims. (Cl. 219—39)

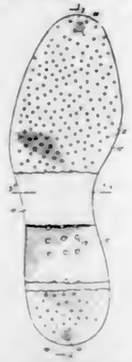
1. An electric heater comprising an elongated casing, a partition dividing said casing longitudinally into upper and lower ducts, an electric heater element disposed in said lower duct, a motor-driven blower, said blower having its outlet in communication with one end of said lower duct, means defining a passageway between said lower and upper ducts at the other end of said lower duct to reverse the direction of air flow upon reaching said upper duct, and outlet means disposed along an exterior wall of said upper duct for discharging warmed air.



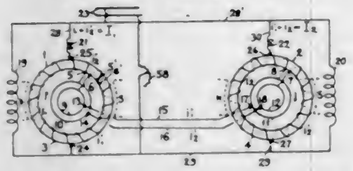
2,451,927
AUTOMATIC MAGNETIC APPARATUS FOR SIMULATING RADIO RANGE SIGNALS
Richard Carl Dehmel, Summit, N. J.
Application April 10, 1946, Serial No. 660,908
5 Claims. (Cl. 35—10)

2. In aircraft training apparatus, a flight-path charting device adapted to be operated by a pupil with respect to a position representing a radio range station, a source of signals representing those of a radio range, a receiver therefor, and signal modulating means including a coil movable in accordance with change in position of said charting device and means composed of a magnetically permeable material spatially related to said coil and arranged so that movement of the

coil over said material varies the permeance of the coil flux path according to the field strength of a simulated radio range so as to cause variation in the coil magnetic flux in the same manner as the field strength of the simulated radio range changes.



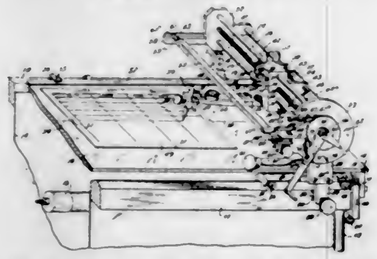
2,451,928
BALL-BEARING VALVE STEM
Raymond Doerr and Keith Doerr, Battle Creek, Mich., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a corporation of Michigan
Application July 9, 1945, Serial No. 603,866
4 Claims. (Cl. 251—46)



4. In a faucet, valve, or the like, having a valve seat and having a valve stem rotatable and movable with respect to the valve seat; said valve stem having a conical portion in its lower end enlarging towards the seat and terminating in an under surface whose peripheral portion is normal to the axis of the stem and whose central portion is carried inwardly and downwardly; a cylindrical seat washer retainer below the stem having a relatively deep recess in its upper face terminating in a truncated contracted conical lower portion having a plane surface bottom disposed normal to the axis of the stem; an annular series of balls disposed between the lower end of the stem and bottom of the recess maintained against outward radial movement by said truncated conical lower portion of the recess, and against inward radial movement by said inwardly and downwardly curved central portion of the under surface of the stem, the upper edge portions of the walls of the recess surrounding and closely forming with the conical portion of the stem while permitting rotation of the retainer on the stem; and a washer mounted on the lower face of the said retainer.

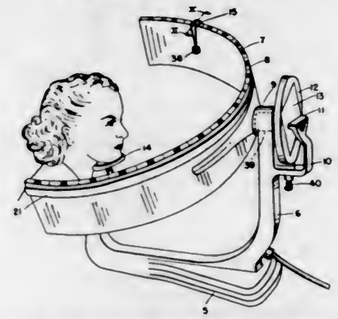
2,451,929
INNER SOLE
Abraham L. Dorgin, New York, N. Y.
Application January 5, 1946, Serial No. 639,216
2 Claims. (Cl. 36—44)

1. An innersole comprising top and bottom layers, the bottom layer being of smooth perforated plastic material, the top layer being of soft cushioning material such as leather and provided with larger perforations, said layers being riveted together at their ends and an intermediate layer of absorbent medicated material such as paper insertable therebetween, said intermediate layer being cut away to provide openings adapted to surround the rivets at both ends.



2,451,930
SYNCHRONIZED MOTOR CONTROL
Leonid A. Dunajeff, Havre de Grace, Md.
Application January 17, 1945, Serial No. 573,245
4 Claims. (Cl. 318—43)

1. An electric system comprising a pair of electric motors, each motor having a field winding and an armature winding, the armature winding being disconnected at one point, the ends of the armature winding of one motor being connected to the ends of the armature winding of the other motor, the two windings with their connections forming a single closed circuit; a stationary set of brushes slidably engaging the armature winding of each motor at diametrically opposite points; and electrical connections for independently energizing each pair of the brushes and the field windings for causing the two motors to rotate.

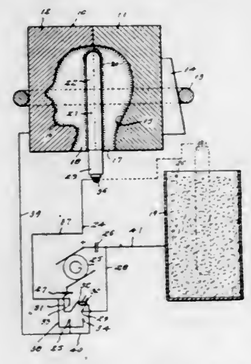


2,451,931
CONSECUTIVE RULING MACHINE
Harry Edelmann, Cleveland, Ohio
Application July 27, 1944, Serial No. 546,837
8 Claims. (Cl. 33—32)

1. In a machine of the character described, the combination, with a table having a bed plate

thereon for the support of sheets to be ruled, of a carriage movable fore-and-aft of said table, a spacing block, a ruling point secured to said block, a lead screw supported by said carriage and having a driving connection with the said block, guide rods supported by the said carriage and extending through the spacing block above and below the lead screw, means for operating the said lead screw, and means for reciprocating the said carriage longitudinally of said bed plate.

2,451,932
ADJUSTABLE PERIMETER TARGET
Charles A. Ellis, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application June 4, 1945, Serial No. 597,436
3 Claims. (Cl. 88—20)

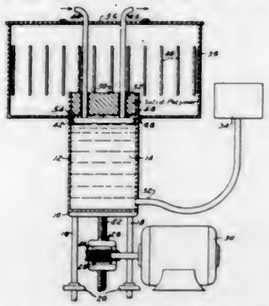


1. In an eye testing device, the combination of a curved track having a fixation object centrally thereof, a movable carriage mounted on said track, a readily detachable member carried by said carriage, a pair of converging, rigid, fine wire-like members secured adjacent one end thereof, and in spaced relation to each other, to the detachable member, the opposed ends of said wire-like members substantially meeting, a pivot member secured to said substantially meeting ends, a block mounted on said pivot member for rotational movement about the pivot member, and a plurality of test objects on said block, said wire-like members being of a dimension substantially invisible to the eye of an individual under test positioned in front of the device, said eye under test being located substantially at the center of the radius of curvature of the track and having its line of vision fixed on the fixation object.

2,451,933
ROPE OR WIRE TIGHTENER
Elmer A. England, Kalamazoo, Mich.
Application July 22, 1946, Serial No. 685,550
3 Claims. (Cl. 24—71.3)

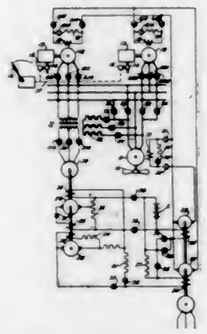
1. A rope or wire tightener comprising an elongated bar-like body having a central hole transversely therethrough adapted to receive a rope or wire, and longitudinal slots opening at each end thereof and terminating adjacent to but spaced from the hole providing a hub on which a rope or wire may be wound, the slots being relatively long, and outwardly facing C-shaped clips secured to a side of the body member adjacent its ends, the side of the body being transversely recessed to receive the stems of the clips with the arms of the clips projecting from the recesses, the clips being secured in the recesses by screws arranged through the sides thereof, the side edges of the recesses being in supported engagement with the side edges of the stems of the clips whereby rotative movement of the clips is prevented, the recesses being of such depth as to receive the heads of screws to minimize abrading of a rope engaged with the clips.

2,451,934
METHOD FOR MOLDING HOLLOW OBJECTS
Clarence Augustus Evans, Atlanta, Ga.
Application March 15, 1946, Serial No. 654,695
3 Claims. (Cl. 18—58.4)



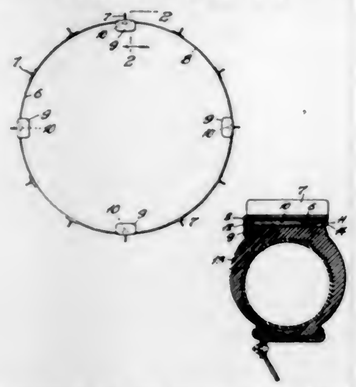
1. The process for forming hollow plastic articles of organic material in a sectional mold which comprises depositing said material on a statically charged electrode, inserting said electrode within the cavity of said mold, reversing the polarity of the charge on the electrode and charging the mold with a polarity opposite from said electrode whereby said material is deposited on the walls of the cavity of the mold.

2,451,935
METHOD OF CAST POLYMERIZATION
Newton C. Foster, McKeesport, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 7, 1944, Serial No. 543,915
1 Claim. (Cl. 260—95)



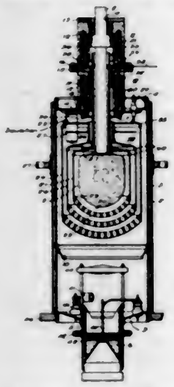
The method of polymerizing a liquid composition capable of being substantially completely polymerized by heating into a solid polymer, comprising the steps of confining a body of the liquid composition so that at a given point it is disposed as a thin horizontal plane layer of predetermined cross-section, applying heat to the liquid composition at the thin layer from one side thereof so that at least a part of the liquid in the layer attains the given temperature at which polymerization of the liquid composition takes place, cooling the other side of the layer of liquid composition from a point within the body

of the composition over a plane parallel to said layer to maintain at least a part of said layer at a lower temperature at which polymerization does not occur, whereby the composition within the thin layer has a thermal gradient from the one side of said layer to the other and only that portion of the plane surface adjacent the said one side being heated is polymerized, and the



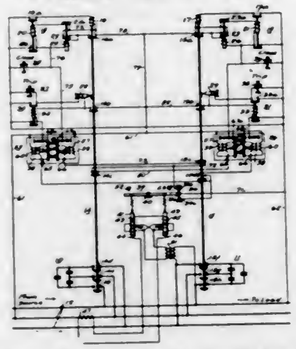
remainder of the body of liquid composition is below the polymerization temperature, moving the liquid composition with respect to said first mentioned point in the direction of the heating at a relatively uniform rate so that continuous, progressive polymerization of the liquid composition in thin planar layers takes place, and continuing the relative movement until a solid polymer of predetermined size is produced, the polymer being characterized by a high degree of homogeneity.

2,451,936
PROPULSION DRIVE
Erling Frisch, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1946, Serial No. 711,404
7 Claims. (Cl. 318—148)



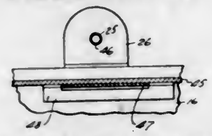
1. An electric ship propulsion system comprising, in combination, a prime mover, an alternating-current generator having an armature connected with said prime mover, a propulsion bus connected with said generator, a propulsion motor connected with said bus, field excitation means for said generator, a regulating generator for said excitation means which is normally inoperative to affect the strength of said field excitation means, and a pilot generator responsive to the speed of operation of said prime mover and operative upon a change in the speed of operation of said prime mover to render said regulating generator operable to regulate the strength of said field excitation means.

2,451,937
ATTACHABLE TRACTION LUG RIM
Claude C. Fulton, Florissant, Mo.
Application April 27, 1946, Serial No. 665,477
5 Claims. (Cl. 152—174)



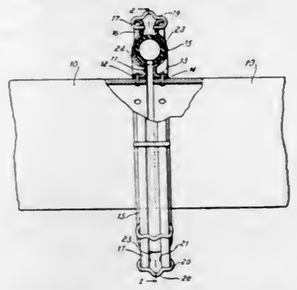
5. A traction lug rim comprising a flexible flat band having spaced lugs secured on its outer periphery, spaced inwardly directed side members on one side only of said band, and transversely disposed raised portions on the inner periphery of said band, said portions being tapered on one end.

2,451,938
VAPOR ELECTRIC DEVICE
Max Garbuny and Robert E. Hull, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 23, 1947, Serial No. 781,638
9 Claims. (Cl. 250—27.5)



1. A shock-resisting construction for a vapor electric valve comprising an elongated metal envelope, the top end of said envelope including a header having an opening therein, an anode in said envelope, said anode having a working face shaped as a spherical section, a metallic anode stem attached to said anode and extending through said opening, an insulating bushing rigidly supporting said anode stem with respect to said envelope, an anode shield substantially enclosing said anode and extending along the major portion of the anode stem, means intermediate the ends of said insulating bushing for rigidly supporting said anode shield, a vacuum-proof seal between said envelope and said anode shield and a vacuum-proof seal between said anode shield and said anode stem.

2,451,939
AUTOMATIC SWITCHING SYSTEM
Ralph A. Geiselman and William H. Cuttino, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 27, 1944, Serial No. 533,097
5 Claims. (Cl. 175—375)



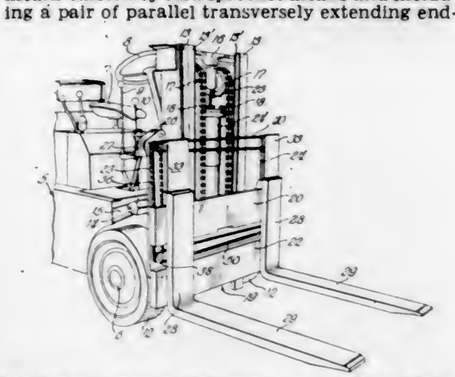
1. A control system for a circuit breaker controlling the connection of a capacitor to a power system comprising, relay means operable to control the operation of the circuit breaker, control means having a movable contact member with magnetic accelerating means operable to provide quick make and break operation and a plurality of current and voltage operating windings energized from the system for actuating the contact member in different senses depending on whether the reactive kilovolt-amperes are leading or lagging, and time delay means selectively operable in response to operation of the control means a predetermined time after operation of the control means to effect operation of the relay means to open or close the circuit breaker.

2,451,940
DOUGHNUT GLAZING MACHINE
Michel J. Gendusa, New Orleans, La.
Application October 17, 1946, Serial No. 703,847
1 Claim. (Cl. 91—3)

In a glazing machine for bakery products, an open top tank for containing glazing liquid, an endless woven fabric belt traversing the top of said tank, means for drawing liquid from said tank and delivering it onto successive lengths of said belt, said means including a jet pipe extending transversely above said belt having a multiplicity of jet holes on its under side and a pump having pipe connections with said tank and with said jet pipe, said belt having upper and lower runs, and a plate beneath the upper run of said belt and located beneath said jet pipe, the upper run of said belt moving over said plate resting on and in direct contact therewith whereby the porosities of said belt are closed in that portion of the belt in contact with said plate.

2,451,941
FLEXIBLE CONNECTION AND SEAL
John E. Glover, Jr., Queens Village, and John C. Hanson, Hicksville, N. Y., assignors to Republic Aviation Corporation, a corporation of Delaware
Application November 29, 1943, Serial No. 512,098
4 Claims. (Cl. 285—129)

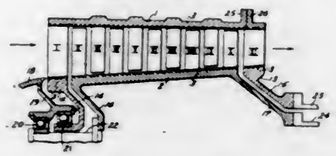
1. A flexible and sealing connection between the spaced adjoining ends of approximately aligned and relatively movable conduit sections comprising a pair of relatively thin complementary plates each embracing and secured to the end of one of said conduit sections and having a continuous concavity medially of its width to combine with the concavity of the companion plate to define a continuous hollow housing between said plates, those portions of the plates located outwardly of said housing being approximately parallel and further spaced one from the other than the portions of the plates adjacent the conduit sections, a flexible sealing member mounted in and completely filling said housing, having a series of vents communicating with the space between the conduit ends, and means for circumferentially and flexibly securing said plates together and compressing said seal.



2,451,942
PREPARATION OF N-ALKYL DIETHANOLAMINES
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 8, 1944, Serial No. 544,137
4 Claims. (Cl. 260—584)

1. In a process for the preparation of an N-ethyl diethanolamine substantially free from O-alkylated derivatives the step which comprises subjecting a diethanolamine to a reaction with diethyl sulfate in the presence of an aqueous solution of sodium carbonate at a temperature between 20 and 150° C. the decomposition of the alkyl sulfate being minimized by the use of a slight molar excess of the sodium carbonate over that necessary to convert the sulfate ions liberated to sodium sulfate.

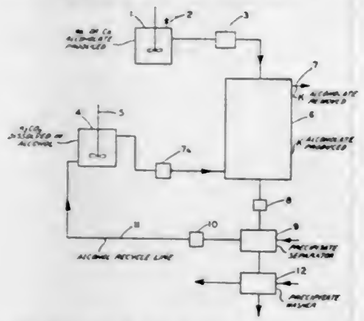
2,451,943
INDUSTRIAL TRUCK
Alfred Wayne Gunning, Battle Creek, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application May 20, 1946, Serial No. 670,950
6 Claims. (Cl. 214—113)



1. In an industrial fork type truck having a pair of vertical uprights at one end thereof, a load

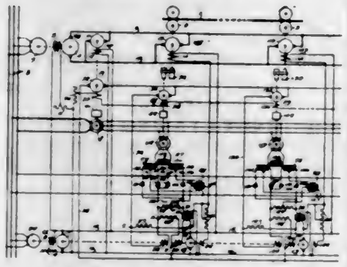
supporting carriage mounted for vertical movement in said uprights, a pair of load engaging forks mounted on said carriage for lateral sliding movement, sprocket means on said carriage, chain means carried by said sprocket means and including a pair of parallel transversely extending end-

less chains having the upper run of each chain secured to one fork and the lower run of each chain secured to the other of said forks, and means for conjointly actuating said chains to move said forks laterally toward or away from each other.



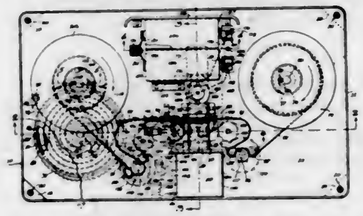
2,451,944
AXIAL FLOW COMPRESSOR AND LIKE MACHINES
Joseph Stanley Hall, Sale, England, assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a company of Great Britain
Application January 13, 1944, Serial No. 518,181
In Great Britain January 21, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires January 21, 1962
18 Claims. (Cl. 230—123)

1. The method of manufacturing a machine of the character specified which includes the steps of assembling a fully bladed member, separately assembling the sections of a second fully bladed member with each section provided with at least one row of blading having such form and pitch that it can be interthreaded with at least one row of blading on said first member, moving the sections of said second member axially toward one another and telescopically with respect to said first member into operative relationship while interthreading the blading of said rows on said sections with rows of blading on said first member, and joining adjacent ends of said sections and thereby maintaining the latter in assembled relationship on said first member.



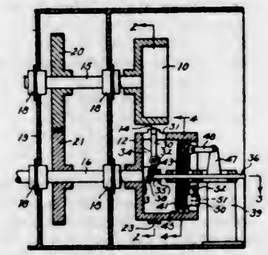
3. Apparatus of the character specified comprising contra-rotational members one within the other and carrying rows of radial blading, internal bearings for rotatably supporting said members, and a blade ring additional to at least one of said members, the blading of said members being of such form and pitch that they may be interthreaded for assembly.

2,451,945
PREPARATION OF POTASSIUM ALCOHOLATES
William E. Hanford, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
Application May 25, 1945, Serial No. 595,713
8 Claims. (Cl. 260—632)



1. The process of producing a potassium alcoholate which comprises reacting potassium carbonate with an alcoholate selected from the class consisting of calcium and sodium alcoholates in an inert diluent which is a solvent for the potassium carbonate and a non-solvent for sodium and calcium carbonates.

2,451,946
MOTOR CONTROL SYSTEM
Walter R. Harris, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1946, Serial No. 685,059
12 Claims. (Cl. 318—85)

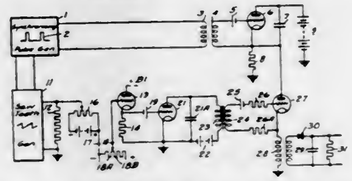


12. A motor control system comprising an adjustable-speed primary motor, a direct current secondary motor having an armature and a speed-controlling field winding, circuit means for providing substantially constant voltage, a regulating generator having an armature series-connected with said motor field winding across said circuit means so that said winding receives excitation having a constant component modified by a variable component under control by said regulating generator so as to cause said secondary motor to operate in a constant speed relation to said primary motor, said regulating generator having field winding means for controlling said variable component, a primary synchro-tie unit mechanically connected to said primary motor to be driven thereby, a secondary synchro-tie unit mechanically connected to said secondary motor to be driven thereby and electrically connected to said primary synchro-tie unit to provide an output voltage dependent in phase and magnitude on the direction and extent of a positional difference occurring between said motors, and current means connecting said secondary synchro-tie unit with said field winding means for impressing on the latter a reversible corrective voltage under control by said output voltage in order to superimpose on said control generator a position-responsive corrective control for increased constancy of said speed relation.

2,451,947
HAND-CARRIED MOTION-PICTURE PROJECTING AND VIEWING DEVICE
Louis A. Harvey, Detroit, Mich.
Application April 4, 1946, Serial No. 659,631
2 Claims. (Cl. 88—24)

1. A self-contained hand-carried apparatus for projecting and viewing motion picture film comprising a casing including a partition dividing the interior thereof into upper and lower compartments, an electric battery carried by said casing, a film illuminator including an electric projection lamp centrally mounted on said partition and electrically connected to said electric battery, a film feeder adjacent said lamp, a pair of laterally spaced film spool shafts rotatably mounted in said casing on opposite sides of said lamp and extending through said partition an image screen carried by said casing, a lens system adapted to project an image of said film onto said screen, a plurality of sequentially disposed reflectors positioned between said lens system and said screen, and a spring-actuated motor mounted in said lower compartment and operatively connected to said film feeder and to one of said shafts.

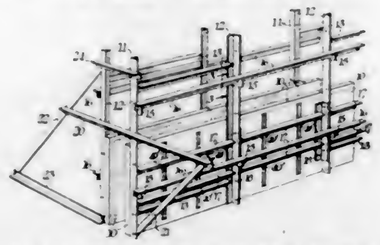
2,451,948
SHEARING APPARATUS
Charles W. Hawthorne, York, Pa., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts
Application April 26, 1946, Serial No. 665,254
8 Claims. (Cl. 164—66)



1. Apparatus for severing longitudinally traveling bars comprising a revoluble carrier, means to guide each approaching bar in a path adjacent the carrier and tangential thereto, a blade mounted on the carrier to revolve therewith and movable transversely of the path of the bar, a helical screw-thread revoluble about its axis, means to revolve the carrier and the screw-thread in timed relationship, a lever fulcrumed intermediate its length for rocking movement substantially in an axial plane of the screw-thread, means to connect the opposite ends of the lever alternately to the screw-thread and thereby rock the lever, means connecting the lever to the blade to move the blade transversely of the path of the bar, and means cooperating with the blade to effect severance of the bar as the blade crosses the path of the bar.

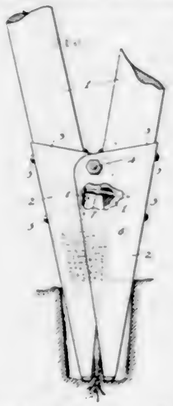
2,451,949
PRODUCTION OF ACETALS
Heinz Heinemann, Upper Darby, Pa., assignor to Porocel Corporation, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application February 26, 1946, Serial No. 650,393
7 Claims. (Cl. 260—615)

1. The method of producing an acetal, which comprises reacting an alcohol with an aldehyde in the presence of a naturally occurring argillaceous adsorbent which has been thermally activated.



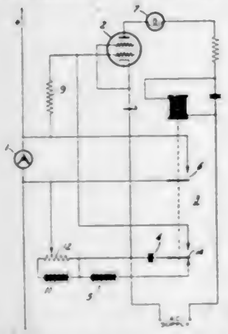
2,451,950
ELECTRICAL NETWORK
John A. Hipple, Jr., Verona, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 27, 1944, Serial No. 533,093
5 Claims. (Cl. 250—27)

5. An electrical network having input terminals and output terminals and comprising a source of constant voltage, a resistor and a capacitor connected in series with each other, a first gaseous discharge tube having a control electrode shunting said capacitor, a second electrical discharge tube having an anode, a control electrode and a cathode connected in series with said output terminals across said resistor, means for generating voltage pulses having a duration short compared with their periodic time, means for impressing said voltage pulses on the control electrode of said first electrical discharge tube, a generator of saw-tooth voltage synchronized with said voltage pulses and having its output terminals in series with said input terminals, a third electrical discharge tube having an anode, a control electrode and a cathode with a cathode resistor and is connected to a current supply and having the voltage output of said saw-tooth generator and said input voltage connected between its control electrode and the terminal of said cathode resistor which is remote from its cathode, means for impressing the voltage drop of said cathode resistor between the control electrode and cathode of a fourth electrical discharge tube, said fourth electrical discharge tube containing a gaseous atmosphere and having a cathode and an anode supplied with current and cooperating with said control electrode, and means



for impressing a voltage proportional to the rate of change of current flow between the cathode and anode of said fourth discharge tube between the control electrode and cathode of said second electrical discharge tube.

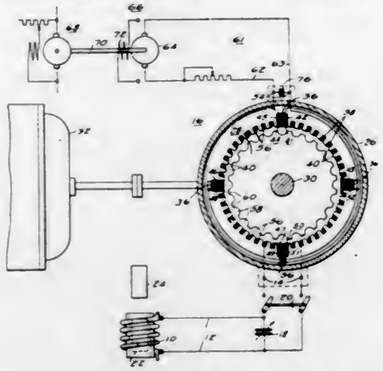
2,451,951
APPARATUS FOR MOLDING CONCRETE WALLS
Philip Y. K. Howat, Washington, D. C.
Application June 6, 1946, Serial No. 674,683
4 Claims. (Cl. 25—131)



4. An apparatus for molding walls and the like from a plastic material such as concrete which comprises spaced rectangular frames, mold plaques supported by said frames on their facing sides to define a mold area therebetween, said plaques including a frame formed of inturned channel members, bracing channel members extending between two opposed sides of said frame and positioned so that its free edges lie flush with the outer surfaces of said frame, straps spanning the channels of said bracing members, and a sheet of concrete completely filling said frame flush with the outer surfaces thereof except for the channels in said bracing members, and retainers spanning said supporting frames and on the opposite sides thereof from said plaques, said retainers having laterally extending tongues to fit within the channels in said plaques and behind the straps spanning said channels.

2,451,952
WEED EXTRACTOR
Bernhard L. Hulsebus, Pasadena, Calif., assignor to Everett B. Hulsebus, Peoria, Ill.
Application April 23, 1945, Serial No. 589,842
1 Claim. (Cl. 294—50.8)

A tool of the character described including in its construction two pivotally connected handle portions, a U-shaped blade fashioned to fit each handle portion, and affixed thereto, the longitudinal edges of the two blades adapted to lap one on the other to jointly provide shearing action, a stop member carried by one of the handle portions, an abutment provided by and at the other handle portion, the stop and abutment adapted to limit the closing movement of the blades to prevent the points of the blades closing on each other for providing a space between said points in lifting a plant unharmed, an abutment lying close to one of the blades providing a space between it and the opposite blade, and a mounted spring bearing at one end upon the last named abutment and spaced from said opposite blade to provide a pasageway for materials between it and the latter, said spring at its other end adapted to engage upon the ground surface when the points of the blades are in the ground at the plant to be lifted.

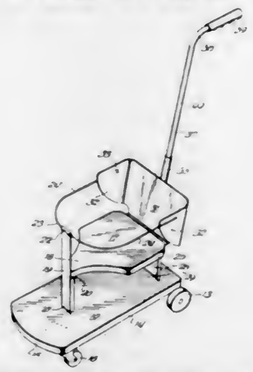


2,451,953
METER PROTECTION CIRCUIT
Curtis S. Ingram, Fairfax, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application August 9, 1946, Serial No. 689,477
4 Claims. (Cl. 171—95)

1. A control circuit comprising a gaseous discharge tube provided with an anode and a cathode and a control electrode, a plate circuit connected between said anode and said cathode and including a relay and a source of alternating current potential, means for applying a predetermined potential between said cathode and said control electrode in order to alter the conductivity of said tube from a first value to a second value, whereby said relay is operated from a first position to a second position, and means responsive to the operation of said relay to said second position for maintaining for a predetermined time interval a voltage between said cathode and said control electrode capable of retaining the conductivity of said tube at said second value, whereby said relay is reoperated from said second position back to said first position at the conclusion of said predetermined time interval.

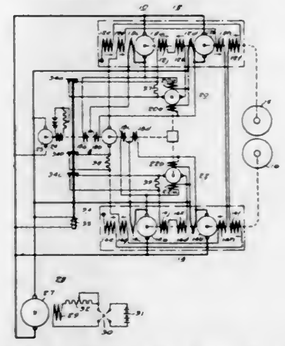
2,451,954
INDUCTOR GENERATOR EQUIPMENT, ESPECIALLY FOR INDUCTION HEATING
Francis J. Johns, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,306
20 Claims. (Cl. 171—252)

1. A system of a type described comprising a reactive load, an inductor generator having output connections for alternating current, and having a plurality of field coils providing unidirectional magnetic fields therein, field coils producing magnetic fields of the same polarity being connected in parallel, means for connecting said



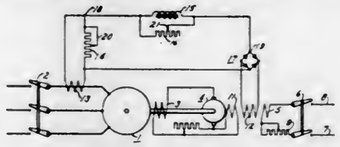
reactive load to said output connections, a phase-balancing capacitor means connected across said output connections, circuit-interrupting means in said output connections, and a capacitor means connected across said field coils.

2,451,955
COMPOSITION FOR POISON IVY DIAGNOSIS
Harry Keil and Charles R. Dawson, New York, and David Wasserman, Brooklyn, N. Y.
No Drawing. Application September 20, 1945, Serial No. 617,672
12 Claims. (Cl. 167—58)



1. As a therapeutic agent, a synthetic vicinal alkyl pyrocatechol having 10 to 18 carbon atoms in the alkyl group, and a carrier.

2,451,956
FOLDING VEHICLE FOR CHILDREN
Ira B. Kemper, Portland, Oreg.
Application June 7, 1946, Serial No. 675,191
2 Claims. (Cl. 280—36)

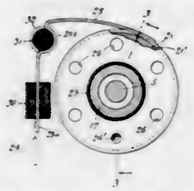


1. A vehicle for children consisting of a base provided with ground engaging wheels, a post hingeably mounted on the forward end of said base, a seat disposed over said base, a plate hinged to said base and to the rear end of said seat, having an upwardly extending back formed thereon, the front of said seat being hinged to said post, a tube hinged to said base behind said plate hinge, a strap on said back adapted to slidably receive said tube, a tubular handle slidably and rotatively mounted in said tube said strap and tube having pin holes formed therethrough, and a pin occupying said holes when said post and plate are in upright positions.

2,451,957
CONTROL SYSTEM FOR ELECTRIC MOTORS
Alonzo F. Kenyon, Churchill, and William R. Harding, Export, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 9, 1946, Serial No. 682,190
8 Claims. (Cl. 318—52)

1. A control system for a motor having an armature and main and compounding field windings, circuit means connected to apply a reversible voltage to the armature, circuit means connected to apply a non-reversible voltage to the main field winding, means including a control generator connected to energize the compounding field winding and having a field winding energized according to the current in the motor armature, and driving means controlling the control generator responsive to the polarity of the voltage applied to the armature of the motor.

2,451,958
CONTROL SYSTEM FOR SYNCHRONOUS MACHINES
Lee A. Kilgore, Forest Hills, and Simon L. Lindbeck, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 13, 1945, Serial No. 572,608
7 Claims. (Cl. 318—180)



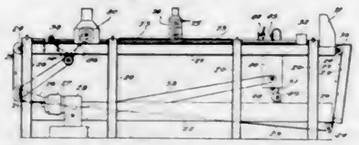
1. In a system of control for a synchronous machine, in combination, an alternating-current circuit, a synchronous machine connected to said circuit, and excitation means for said machine including a current transformer connected to said circuit, a rectifier for supplying direct-current excitation to said excitation means, and circuit means connecting said rectifier and transformer including an alternating-current saturable reactor having a saturation point determined solely by the alternating current supplied thereto by said transformer whereby it is substantially effec-

tive to block all input to said rectifier for currents below a selected load on said circuit, and effective to pass current to said rectifier above said selected load.

2,451,959
ELECTRIC SLIP-RING AND BRUSH CONNECTION

Erling M. Knudsen, Arlington, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware

Application August 28, 1946, Serial No. 693,590
7 Claims. (Cl. 173—324)

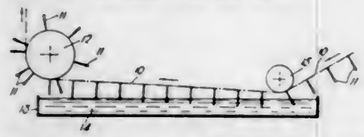


1. An electrical slip-ring and brush connection for reversible operation comprising a conducting ring having a peripheral contact surface, a coacting brush for engaging said surface in substantially one-point contact consisting of a strip of resilient conducting material having a portion disposed generally in a direction tangential to the ring periphery and in contact therewith, said strip also having a terminal portion offset from the contact making portion generally in the same plane therewith, and means for anchoring and holding said terminal portion with respect to both transverse and longitudinal movement including a terminal member in which the outer end of said terminal portion is held with respect to transverse movement and a relatively fixed member against which said strip is resiliently biased in a direction away from said ring, said fixed member positioned intermediate said terminal member and contact making portion and engaged by an intermediate part of said strip so as to hold the brush with respect to longitudinal movement whereby a non-chatter relationship is maintained between said contact portion and ring for rotation of said ring in either direction.

2,451,960
METHOD OF AND APPARATUS FOR PAINTING BEVELS

Samuel Krajci and Leon E. Savage, New Orleans, La., assignors to The Celotex Corporation, Chicago, Ill., a corporation of Delaware

Application April 10, 1944, Serial No. 530,340
4 Claims. (Cl. 117—43)

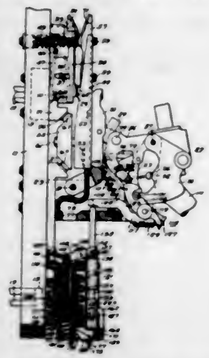


4. The method of providing a smooth finishing coating on an inclined edge surface of a beveled fiberboard tile and comprising the steps: smoothing and burnishing the beveled surface with a heated iron, flooding the beveled surface by flowing a stream of a film-forming paint coating downwardly across such surface to be coated, immediately subsequently to the application of the stream of paint coating, removing excess coating by means of an air jet directed substantially parallel to and across the inclined surface, then partially setting the applied material, and by hot ironing to redistribute, smooth and completely set the applied coating.

2,451,961
PRODUCTION OF HOLLOW ARTICLES BY DIPPING

Lucian Landau, Chingford, London, England, assignor to Latex Industries Limited, Chingford, London, England

Application July 7, 1947, Serial No. 759,385
In Great Britain July 11, 1946
7 Claims. (Cl. 18—24)



3. Apparatus for the production of hollow articles by which formers are dipped into a film-forming liquid, which comprises an endless conveyor band carrying on one side thereof a number of formers rotatably mounted at right angles to the surface of the said conveyor band, means for moving the conveyor steeply towards the surface of the film forming liquid contained in a tank below the said conveyor and means for moving it upwardly in a gradually inclined direction and then spirally and finally in an upward direction.

2,451,962
CIRCUIT BREAKER

Ture Lindstrom, Edgewood, Pa., and Albert H. Baylis, Ypsilanti, Mich., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

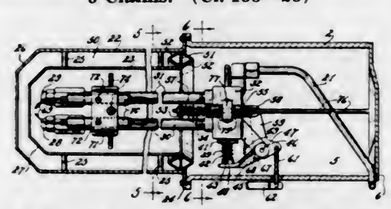
Application October 12, 1945, Serial No. 622,048
26 Claims. (Cl. 200—108)

1. In a circuit breaker comprising relatively movable contacts and operating mechanism therefor, the combination of a trip member operable to effect automatic operation of said operating mechanism, an electromagnetic trip device comprising an energizing winding, a first armature operable to effect operation of said trip member, means comprising a sealed casing movable to cause tripping operation of said first armature, a second armature for moving said casing, and means disposed in said casing and responsive to energization of said electromagnet to delay tripping movement of said first armature.

2,451,963
ISOCYANATES OF HYDROLYZED ETHYLENE VINYL ESTER INTERPOLYMERS

Donald John Loder, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application February 4, 1944, Serial No. 521,135
28 Claims. (Cl. 260—86)



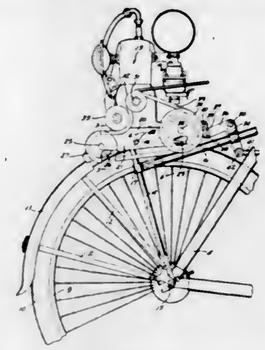
1. A process which comprises subjecting a solution of a hydrolyzed interpolymer of ethylene and vinyl acetate in dioxane to a temperature between 30 and 200° C. with an alkyl isocyanate there being present from 0.5 to 5.0 moles of the alkyl isocyanate per equivalent of hydroxyl in the polymer.

26. A process which comprises subjecting an N-substituted carbamate of a hydrolyzed interpolymer of ethylene and a vinyl ester of an aliphatic saturated organic monocarboxylic acid to a temperature between 20 and 80° C. with a compound of the group consisting of formaldehyde, methylal and methoxymethoxyethanol.

2,451,964
MULTIPLE NOZZLE GUN TYPE OIL BURNER AND CONTROL THEREFOR

Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts

Application March 3, 1947, Serial No. 731,919
5 Claims. (Cl. 158—28)

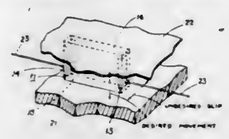


1. In an oil burner for house heating systems, a motor, an air fan, an oil pump, a transmission for driving the fan and pump from said motor, two air tubes arranged one within the other with a passage between them, the inner tube being permanently connected to receive air from said fan, valve means operable to connect or disconnect said passage to or from the fan, oil atomizing means connected to be supplied from said pump at either a high or a low firing rate and located in the inner tube in a position such that the air from the inner tube and the air from the passage between the tubes will mix with the spray emitted from the atomizing means, means for changing the firing rate of the atomizing means from a high to low rate and vice versa, and means operable with the rate changing means for actuating said valve means to open and close the passage between said tubes when the atomizing means is adapted for high and low rate firing respectively.

2,451,965
MOTOR BICYCLE

Ernst A. Longenecker, Milwaukee, Wis., assignor to Hart-Carter Company, Peoria, Ill., a corporation of Delaware

Application September 1, 1945, Serial No. 614,010
11 Claims. (Cl. 180—33)



1. In a motor bicycle, a driving unit including an engine, supporting structure on the bicycle, including a pivotal connection between said driving unit and said structure supporting said unit with said engine on the bicycle adjacent and above the rear wheel thereof for tilting movement in a vertical plane, at least one friction roller rotatably carried by said unit on one side of said pivotal connection and positioned for engagement with the rear wheel tire when the unit with the engine is tilted a predetermined distance in one direction, at least one friction roller rotatably carried by said unit on the other side of said pivotal connection and positioned for engagement with the rear wheel tire when the unit with the engine is tilted a predetermined distance in the opposite direction, and means driven by said engine for driving said rollers at different speeds.

2,451,966
TRANSDUCER

Frank Massa, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

Application November 18, 1944, Serial No. 564,138
23 Claims. (Cl. 171—327)

8. A 45° X-cut piezoelectric element of the Rochelle salt type having three dimensions, one of said dimensions being short and piezoelectrically active, the other two dimensions being several times longer than the short dimension, one of said longer dimensions being piezoelectrically active and the other longer dimension being piezoelectrically inactive.

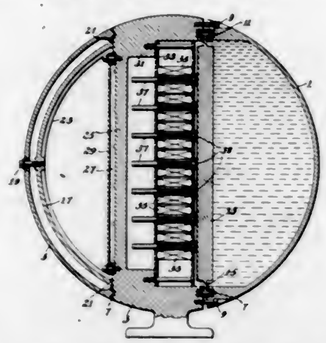
2,451,967
VIBRATIONAL ENERGY TRANSMITTER OR RECEIVER

Frank Massa, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

Original application June 2, 1944, Serial No. 538,469, now Patent No. 2,427,062, dated September 9, 1947. Divided and this application July 28, 1947, Serial No. 764,099
1 Claim. (Cl. 177—386)

In a transducer for radiating and/or receiving vibrational energy and having main and secondary directional lobes, a substantially circular piston of radius R_1, a first substantially annular

piston of inner radius R_1 and outer radius R_2 surrounding and lying in the same plane as said circular piston, a second substantially annular piston of inner radius R_2 and outer radius R_3 surrounding and also lying in the same plane as said circular piston, said circular piston being adapted to vibrate at a given frequency with an amplitude A_1, said first annular piston being adapted to vibrate in phase with said circular



piston with an amplitude A_2, and said second annular piston being adapted to vibrate in phase with said circular piston with an amplitude A_3, the ratio of R_1 to R_2 being substantially .676, the ratio of R_1 to R_3 being substantially .476, the ratio of A_1 to A_2 being substantially 1.9, and the ratio of A_1 to A_3 being substantially 5.8, whereby the ratio of the main lobe energy radiated substantially normal to the plane of the said pistons to the secondary lobe energy is maximum.

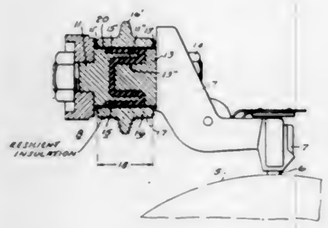
2,451,968

MAGNETOSTRICTIVE ELECTROACOUSTIC TRANSDUCER

Alexander Murdoch, Jr., Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Application January 3, 1940, Serial No. 312,297
9 Claims. (Cl. 177—386)

1. An electroacoustic transducer including a diaphragm, a plurality of magnetostrictive elements attached to said diaphragm so that the points of attachment form a plurality of equilateral triangles having a number of common sides, said elements being so distributed over said diaphragm that the spheres of influence of adjacent elements border each other, and means for energizing said elements.



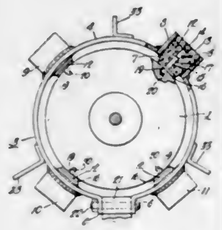
2,451,969

INSULATING MOUNTING FOR BRUSH HOLDERS AND THE LIKE

Erich O. Mueller, Irwin, and Donald L. Gibson, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 31, 1946, Serial No. 687,446
8 Claims. (Cl. 171—324)

1. An insulating mounting comprising a support-end metal member having a cylindrical outer surface, an electrical-end metal member having a cylindrical outer surface of substantially the same diameter, a molded insulating connector-member moldedly interlocking with parts of both of said metal members and securely joining the same together in one mechanically joined but electrically insulated unit, said insulating connector-member having a cylindrical outer surface substantially merging with the cylindrical outer surfaces of the metal members, a creepage-surface insulator fitting over the cylindrical outer surface of the connector-member and having one or more bulged portions, of increased outer diameter, for providing a greater actual-creepage-surface length than the axial length of the creepage-surface insulator, and a substantially non-shrinking, heat, water and oil-resistant, insulating adhering-member substantially completely filling the space between the bore of the creepage-surface insulator and the cylindrical outer surface of the connector-member for preventing electrical flash-over from occurring through said space.

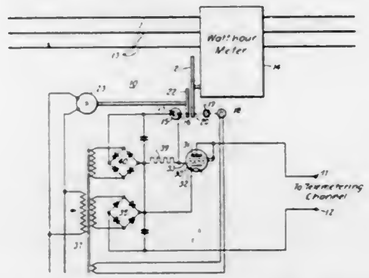


2,451,970

MOUNTING FOR FAN ASSEMBLIES

Ralph K. Odor, Edmond, Okla., assignor to The Vornado Trust, Oklahoma City, Okla., a fiduciary trust of Oklahoma

Application March 3, 1945, Serial No. 580,812
7 Claims. (Cl. 248—26)



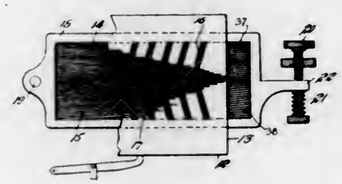
1. In a mounting for electric motors, a support structure having an annular series of substantially radial pockets, a resilient member seated in and projecting from each of said pockets toward the center of the annulus so as to bear against the casing of and, jointly, to resiliently support said motor in the structure, and an element embedded in each of said members and projecting radially from the inner end thereof for interlocking engagement with the said casing to anchor the motor to said members.

2,451,971

IMPULSE TRANSMITTER FOR METERING SYSTEMS

Carl Oman, Cedar Grove, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 1, 1945, Serial No. 591,297
2 Claims. (Cl. 177—351)



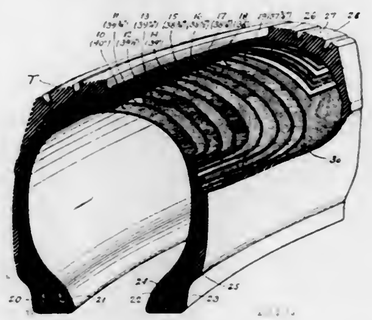
1. A base rate impulse transmitter comprising, a light-sensitive device and a light source, a main shutter disc rotatably positioned between the light source and the light-sensitive device and arranged for rotation by a meter device, said disc having a plurality of evenly spaced openings adjacent the periphery in the path of the light from the source, means including a cylindrical lens between the light source and the disc for producing a beam of light spanning a pair of adjacent openings, a base rate shutter disc of less diameter than the main disc having a plurality of similarly spaced openings, said base rate shutter disc being so rotatably mounted eccentrically of the main shutter disc as to overlap therewith and arranged to permit alignment of a pair of adjacent openings of each shutter disc in the path of the beam of light, means for rotating the base rate disc at a fixed rate to provide a predetermined number of impulses of light when the main shutter disc is still, and an electric discharge valve controlled by the light-sensitive device for producing substantially square wave impulses at different rates above and below the base rate in response to rotation of the main and base rate shutter discs.

2,451,972

OPTICAL INDICATOR HAVING COOPERATING GRIDS

Walter P. Powers, Spring Lake, N. J., assignor to Associated Patentees, Inc., Ampere, N. J., a corporation of New Jersey

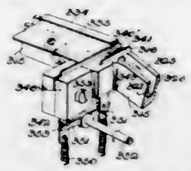
Application December 3, 1945, Serial No. 632,417
5 Claims. (Cl. 88—1)



1. An instrument of the character disclosed comprising companion light screens in closely superposed relation and relatively movable, one over the face of the other, one of said screens being composed of two coplanar grids in edge-to-edge relation and the other screen consisting of a single grid overlying and cooperative with both the grids of the first mentioned screen, each of the three grids being composed of equally spaced parallel opaque lines and intermediate clear spaces and the two coplanar grids arranged in non-parallel, divergent relation to cause portions of the lines and spaces of the single grid to coincide periodically at regularly recurrent intervals with portions of the lines and spaces of the other two grids to align parts of the superimposed grids to form two contiguous convergent larger mesh apparent scales of more widely spaced, wider lines in opposed edge-to-edge relation, means for effecting relatively fine adjustments of the two grids forming the one screen in respect to the other screen to thereby regulate said larger mesh apparent scales and means for effecting relative shifting of said light screens, one over the face of the other, to produce magnified travel of the apparent scales so produced by said regulation, said regulating means comprising a common support for both grids of the two-grid screen, said support being in the form of a single frame pivotally mounted at one end and there being means for effecting fine adjustments of the opposite end of said support on its pivotal mounting to thereby effect simultaneous and similar adjustment of both said two grids in respect to the single grid.

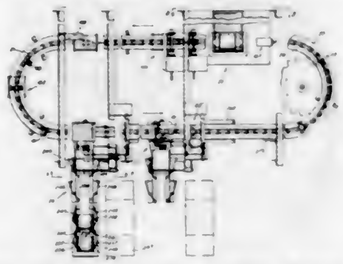
2,451,973

METHOD OF MAKING PNEUMATIC TIRES



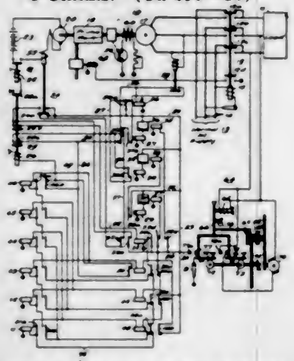
John F. Purdy, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

Original application August 8, 1942, Serial No. 454,086. Divided and this application January 30, 1945, Serial No. 575,257
8 Claims. (Cl. 154—14)



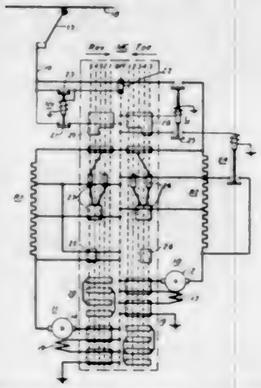
1. The method of building a pneumatic tire which includes the steps of cutting rubberized cord fabric into a plurality of plies, assembling the plies into a band, building the band on a tire building form, cutting a plurality of plies of rubberized cord fabric on a smaller bias angle than the first-named plies, assembling the plies into a second band, building the second band on the building form over the first-named band, cutting a plurality of plies of rubberized cord fabric on a still smaller bias angle than the first and second-named plies, assembling the plies into a third band, building the third band on the building form over the second-named band, and repeating this operation until the desired number of plies are assembled.

2,451,974
LOCKING LEVER FEEDING MEANS
Harry A. Rau, Baltimore, Md., assignor to Crown Cork Specialty Corporation, Decatur, Ill., a corporation of Illinois
Original application August 3, 1940, Serial No. 350,707. Divided and this application February 27, 1943, Serial No. 477,436
3 Claims. (Cl. 193—40)



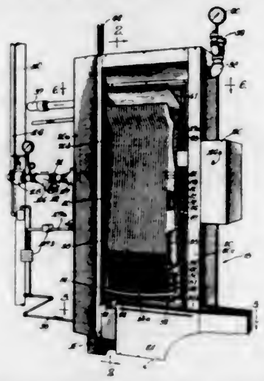
3. In an apparatus of the class described, an inclined U-shaped chute for articles, said chute having its trough facing upwardly, a pair of elements spaced apart lengthwise of the chute, each of said elements including a horizontal arm extending across and above the trough and a depending arm extending alongside the chute, a block in which said depending arms are vertically slidable, said depending arms being spaced in said block in a direction transversely of said chute, spring means to urge said elements downwardly in said block so that their horizontal arms will be adjacent the trough to hold articles against movement, and rocking means extending between said depending arms to alternately lift said elements so that articles may move beneath their horizontal arms.

2,451,975
CONVEYER
Vincent A. Rayburn and Duer C. Robson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 21, 1945, Serial No. 636,405
14 Claims. (Cl. 214—60)



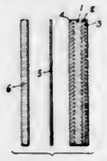
1. An overhead conveyer system, which comprises an endless chain, means for advancing the chain along a predetermined path, a plurality of hooks, means for securing the hooks to the chain at points spaced therealong, a loader positioned adjacent to said path for selectively positioning reels of different types in the path of the hooks, means for placing the hooks in positions in which the hooks point in the direction of travel of the chain when the hooks are being advanced past the loader, whereby one of the hooks being advanced past the loader enters the drum of a reel positioned in the path of the hook by the loader and carries the reel from the loader, means for turning the hooks after the hooks leave the loader to positions in which the hooks are pointed in directions opposite to those in which the hooks are being advanced, and means positioned adjacent to said path for selectively lifting reels positioned on the hooks from the hooks.

2,451,976
CONTROL SYSTEM
Maurice E. Reagan, Pittsburgh, and Willard A. Derr, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 28, 1945, Serial No. 631,395
9 Claims. (Cl. 290—30)



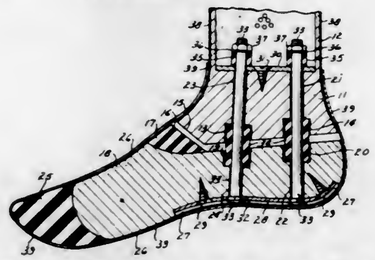
1. In a control system for an internal combustion engine having a starting motor, switch means operable to connect the motor to a source of electrical energy, timing means operable to effect operation of the switch means for a predetermined time, additional timing means operable to render the switch means inoperative for a predetermined time, control means operable to provide for operation of the switch means a predetermined number of times, and means responsive to the armature current of the engine starting motor operable to prevent further operation of the switch means.

2,451,977
CONTROL SYSTEM
David E. Renshaw, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,383
5 Claims. (Cl. 318—274)



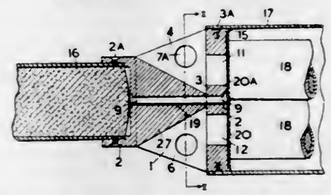
5. In a motor control system, in combination, a motor, a power conductor, switching means for connecting the motor to the power conductor, a resistor for controlling the motor current, a manually operable controller for controlling the shunting of said resistor, said controller being operable to establish dynamic braking connections for the motor when the power conductor is deenergized, and means electrically controlled through said switching means and responsive to the deenergization of said power conductor for preventing the shunting of all of said resistor during dynamic braking.

2,451,978
SETTING APPARATUS FOR TEXTILE FABRICS
Henry Richter, Kankakee, Ill., assignor to Paramount Textile Machinery Co., Kankakee, Ill., a corporation of Illinois
Application June 21, 1946, Serial No. 678,231
21 Claims. (Cl. 223—76)



21. The combination in setting apparatus of the class described, of an upright retort having a vertical door opening, a door located within said retort for closing said opening, means for mounting said door to permit bodily movement thereof and rotation thereof on a vertical axis within said retort whereby either face of the door may be presented outwardly when the door is closing said opening, and forms mounted on both faces of said door for supporting textile articles.

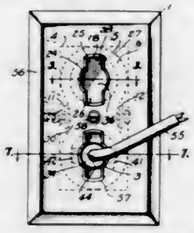
2,451,979
INDICATING DEVICE
Solomon Rosenblum, Princeton, N. J., assignor to Canadian Radium & Uranium Corporation, New York, N. Y., a corporation of New York
Application September 4, 1943, Serial No. 501,209
4 Claims. (Cl. 282—28)



1. An indicating device comprising a non-compressible and light-permeable carrier, light-emitting material located upon the rear face of said carrier in order to transmit light through said carrier, tablet material located on the front face of said carrier, said tablet material being light-permeable so that the light which is emitted by said light-emitting material will be transmitted through said tablet material, said tablet material being sufficiently deformable under pressure to change its permeability to light solely under applied pressure, to provide the necessary contrast for reading the markings which are made in said tablet material by applied pressure, said tablet material being adherent, a writing tablet applied to the front face of said tablet material, said writing tablet being light-permeable and being deformable under pressure, so that pressure which is applied to the front face of said writing tablet is transmitted through said writing tablet to deform the tablet material at the point of applied pressure.

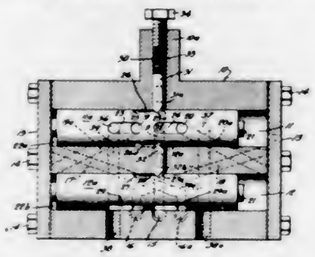
2,451,980
ARTIFICIAL LIMB
Starlin B. Samons, Sr., River Rouge, Mich.
Application May 17, 1946, Serial No. 671,162
4 Claims. (Cl. 3—5)

1. In an artificial leg, a leg portion, with a pair of spaced slots in its under surface, a foot portion with a corresponding pair of slots in its top surface, resilient cushions interposed between said portions with their ends retainingly nested in said slots to maintain a varying spaced relation between said portions, and securing bolts extending through said cushions and loosely through corresponding openings in said leg and foot portions interconnecting the same and permitting universal tipping motion of one portion relative to the other.



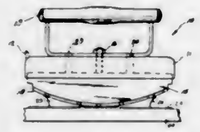
2,451,981
ROCKET AND THE LIKE
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England
Application May 5, 1947, Serial No. 745,967
In Great Britain August 10, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires August 10, 1959
9 Claims. (Cl. 102—34.5)

1. A rocket device comprising a single rocket adapted to be fired from a gun, a plurality of additional rockets arranged forwardly of the single rocket and an intermediate member by which the plurality of rockets is secured to the single rocket, the said intermediate member com-



prising a sleeve and a disc, the sleeve being secured to the single rocket and having a central aperture and the disc being secured to the plurality of rockets and having a central aperture and also a number of further apertures corresponding to the number of additional rockets, the sleeve and disc being secured to each other by suitable webs in which is provided a passage connecting the central apertures in the sleeve and disc.

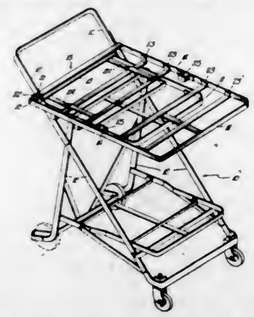
2,451,982
ELECTRICAL PLUG AND SOCKET
Eben L. Scott, Mission, Kans.
Application January 31, 1945, Serial No. 575,391
2 Claims. (Cl. 173—330)



1. In a device of the character described, a socket element having a recess therein, insulating means covering said recess and provided with a plug inlet opening including a circular portion substantially coaxial with the socket and substantially oppositely arranged radial notch-like portions, said insulating means having seating faces at the sides of the circular portion and facing said recess and having contact exposing recesses within and completely surrounded by said seating faces, contact elements within said insulating means and exposed through said recesses in the seating faces, a closure member in said socket-like recess and having marginal portions contacting the face portions completely around the contact exposing recesses to completely cover the exposed portions of the contacts, and a coil spring in the socket recess and bearing substantially circumferentially of said marginal portions for urging the closure member into contact with said seating faces.

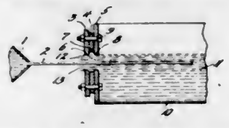
2,451,983
FLUID ACTUATED PISTON DISTRIBUTING VALVE WITH FLUID ACTUATED PISTON PILOT VALVE FOR EXPANSIBLE CHAMBER MOTORS
Edgar C. Seward, Arlington, Va., and Frank Walcutt, Queens Village, N. Y.
Application April 9, 1945, Serial No. 587,390
3 Claims. (Cl. 121—158)

1. A hydraulic reversing valve comprising a casing, a pair of bores in said casing, a piston in each of said bores and arranged to reciprocate therein, one of said pistons having a pair of longitudinally spaced elongated slots transversely provided therein and arranged to permit fluid flow individually therethrough, the other of said pistons having a pair of spaced recesses provided on a portion of the surface thereof and arranged to permit fluid flow individually therethrough, each of said bores having respective ports alternately communicable with said slots in said first piston and said recesses in said second piston as said pistons reciprocate, to permit fluid flow therethrough; a plurality of passages in said casing communicating with said ports, two such passages connecting two of the ports of said first bore with opposite ends of said second bore, two other of said passages connecting two of the ports of said second bore with opposite ends of said first bore, an additional two passages connecting two additional ports in said first bore with pressure outlets from said casing, and a passage connecting a port in each of said bores with a pressure inlet in said casing, said latter ports in each bore being located centrally of the other ports therein.



2,451,984
FUR-CURLING DEVICE
Samuel G. Shapiro, Philadelphia, Pa.
Application February 26, 1948, Serial No. 11,040
3 Claims. (Cl. 69—20)

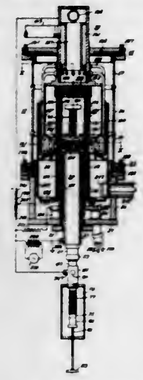
1. In a fur curling tool of the character described, a frame having a handle, an electrically operative heating means carried on the frame and a die positioned on the frame adjacent said heating means and adapted to be heated thereby; said die including a plurality of curling edges of various contours determining a convex surface to be rocked on a fur pelt upon manual movement of the device by hold on the handle; said curling edges being adapted as the device is manipulated so that the die rock on the pelt, to make sliding contact with hairs of the pelt along from point to point progressively on said hairs.



2,451,985
AUXILIARY SHELF FOR CARTS
Harold I. Sides, Chicago, Ill., assignor of one-half to Raymond M. Sides, Chicago, Ill.
Application September 15, 1945, Serial No. 616,485
6 Claims. (Cl. 211—135)

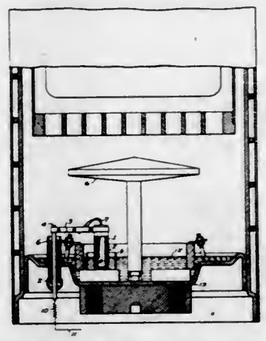
1. In a basket carrying cart of the type employed in self-service stores having a basket carrying shelf supported in substantially horizontal position by side frames, said side frames having portions extending above said basket-carrying shelf, the improvement comprising an auxiliary shelf adapted to be detachably mounted upon and carried by said first named shelf and said side frame portions, said auxiliary shelf including a frame member defining an area greater than said first named shelf and adapted to carry two baskets disposed transversely thereof, clamping means connected to one end of said auxiliary shelf and adapted to be clamped to said side frame portions above said first named shelf, and bracing members connecting opposite sides of said frame member constituting the auxiliary

shelf, which bracing members are adapted to be supported by said first named shelf.



2,451,986
THERMOPLASTIC EXTRUSION METHOD
Charles E. Slaughter, New Canaan, Conn., assignor to Extruded Plastics, Inc., Norwalk, Conn., a corporation of Connecticut
Application May 25, 1943, Serial No. 488,458
4 Claims. (Cl. 18—55)

1. The method of fabricating extruded thermoplastic articles which comprises extruding heated thermoplastic material through a die and while still in plastic condition from the hot extruding step, passing the extruded product through a plate having a contour-determining opening in the wall thereof through which the extruded product may pass, the contour-determining opening being complementary to the shape of the extruded article and just large enough to permit coolant to pass between the extruded plastic and the walls forming the opening in the plate and supplying a thin layer of liquid coolant to the extruded product between the wall forming the opening and the extruded product at any points where the extruded product and plate would contact in the absence of said coolant, the coolant extending as a meniscus on the product beyond the plate in the direction of the extrusion die.

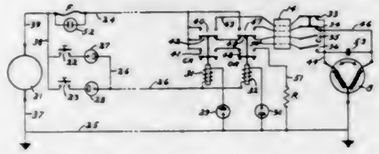


2,451,987
ELECTRONIC TUBE FOR ULTRA HIGH FREQUENCIES
David H. Sloan, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 17, 1944, Serial No. 526,883
10 Claims. (Cl. 315—6)

1. An electronic tube comprising an anode, an elongated cathode portion adapted to project electrons along a path toward the anode, said anode comprising a convoluted section of a pipe of conductive material through which a cooling fluid is to be passed, the convolutions of said pipe section including a plurality of substantially coextensive pipe portions substantially parallel to said elongated cathode portion, one of said pipe portions being positioned at a preselected point intercepting the center line of said path, and other of said pipe portions being positioned on opposite sides of said center line between said

one pipe portion and said cathode and defining with said one pipe portion a groove into which said electron path projects with said one pipe portion at the bottom of the groove.

2,451,988
ELECTRIC DISCHARGE DEVICE
David Lorimer Smart, Stafford, England, assignor to The English Electric Company Limited, London, England, a British company
Application April 2, 1947, Serial No. 738,978
In Great Britain November 24, 1945
Section 1, Public Law 690, August 8, 1946
8 Claims. (Cl. 250—27.5)



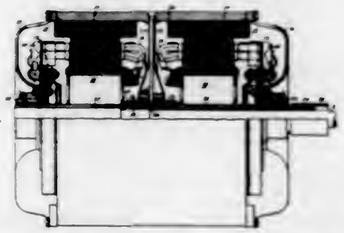
1. An electric discharge device having an ignition electrode separated from a free edge of a liquid pool cathode by a dielectric comprising a plurality of layers of different materials, the layer in contact with the pool edge being thinner than, and having lower specific inductive capacity than, the next layer.

2,451,989
MOTOR REVERSING CONTROL SYSTEM FOR VALVES
Edward P. Smith, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application May 3, 1944, Serial No. 533,967
10 Claims. (Cl. 318—266)

1. A control system for a pipe line valve, comprising in combination, an electric motor operable

in two directions, circuit means to connect the motor to a source of alternating current, the circuit means including a plurality of limit switches to limit the movement of the motor when the motor has rotated in the said two directions a predetermined amount, a pair of electrically operable relay switches to selectively effect energization of said circuit means and limit switches, a single control circuit, operating coils for the relay switches connected to and energized when the control circuit is energized, means to selectively energize the control circuit whereby the relay switches will be selectively energized, the last said means comprising a pair of normally open manually closable switches each independ-

ently connecting the said single control circuit to the source of power to energize the control circuit and rectifying means included in said control circuit whereby only one relay switch will operate at a time depending upon which normally open switch is closed, safety means to open the circuit means should a short-circuit occur between the control circuit and one of the other circuits whereby both relay switches would operate simultaneously, the said safety means comprising a circuit of predetermined resistance closed by the simultaneous operation of both relays whereby a limited current will flow through last said circuit and means to open the last said circuit as a result of said limited current.



2,451,990

DOUBLE ELECTRIC MOTOR DRIVING MEANS

Carl H. Sutherland, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application October 24, 1945, Serial No. 624,288

1 Claim. (Cl. 172—36)

A combination comprising two axially aligned machines, each machine having a stator member and a rotor member, each rotor member having a hollow shaft, the two rotor members rotating in opposite directions, a centrally disposed bearing for journalling the inner ends of both of said hollow shafts and for providing thrust-bearing support for both of said inner ends, a separate outer journal bearing for the outer end of each of said hollow shafts, an inner shaft extending through one of said hollow shafts and having a drive-connection to the inside of the other hollow shaft, and a rigid supporting-means for supporting the two stator members and the three bearings.

2,451,991

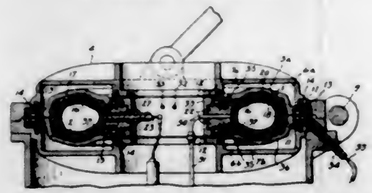
FASTENER

Klas Arent Swanstrom, Buckingham Township, Bucks County, Pa.

Application July 26, 1944, Serial No. 546,659

11 Claims. (Cl. 85—32)

1. A fastener comprising a retainer formed of sheet material and having a base containing an aperture, a nut seated in and movable axially in said aperture and making a close slip fit with the wall thereof, and means axially positioning said nut with respect to said base.



2,451,992

APPARATUS FOR CURING PNEUMATIC TIRES

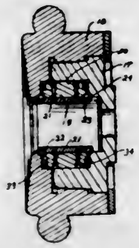
Theodore A. Te Grotenhuis, Olmsted Falls, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Original application April 20, 1944, Serial No. 531,920. Divided and this application November 15, 1945, Serial No. 628,731. In Canada January 31, 1945

5 Claims. (Cl. 18—38)

1. A fluid pressure bag for insertion within pneumatic tires during the curing or repairing thereof, comprising a flexible stretchable wall portion enclosing a fluid-retaining cavity and fluid conduit means through said wall for passage of inflation fluid into said cavity, an annular layer of flexible, electrically conductive material carried by said wall portion, a covering of relatively non-conductive rubberlike composition over at least portions of said layer, the thickness of said covering being greater at the portions of said bag adapted to bear against the side wall of said casing than at the portions adapted to bear against the shoulder portions thereof, and leads extending from said layer to the exterior of said bag for connecting said layer to a suitable source of high frequency electrical energy.

2,451,993



HOLDING DEVICE

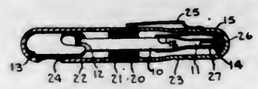
Clarence F. Telfor, St. Clair Shores, and Christian Pallenberg, Detroit, Mich.

Application December 26, 1944, Serial No. 569,903

4 Claims. (Cl. 279—1)

1. A holding device of the class described adapted for holding a gear, comprising: a supporting member having a bore formed therein; a bushing mounted in said bore and movable axially thereof; a plurality of axially directed ball retainers mounted on said bushing in circumferential spaced relation and projecting radially inwardly from the inner face of said bushing and adapted for engaging between the teeth of a gear placed within said bushing; balls on each of said retainers and engaging between the teeth of the

gear; a thrust member mounted on said supporting member and movable for delivering an axial thrust to said bushing; means for moving said balls radially upon axial movement of said bushing.



2,451,994

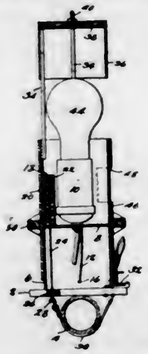
SPLINTER REMOVER

John E. Towns, Milwaukee, Wis.

Application October 28, 1946, Serial No. 706,156

3 Claims. (Cl. 128—354)

1. In a device of the character described, the combination of a glass tube having a reduced discharge end portion and a resilient bulb for discharging an antiseptic from said tube, of a pair of tweezers comprising relatively movable jaws, one of said jaws having a tubular base portion fitting around the discharge end of said glass tube.



2,451,995

LAMP FOR HOSPITAL BEDS

Eddie P. Truesdale, Orangeburg, S. C.

Application April 14, 1947, Serial No. 741,256

2 Claims. (Cl. 240—11.2)

1. In a lamp, a base, means for securing the base to a support, a cylindrical body rising from the base, a lamp socket in the cylindrical body and an electric bulb in the socket extending above the cylindrical body, a hood supported above and in spaced relation with the cylindrical body, and an apertured cylindrical closure slidably mounted on the cylindrical body adapted to close the space between the cylindrical body and hood, and said apertured cylinder being rotatable about the cylindrical body whereby light rays from the lamp may be directed through the aperture in predetermined directions.

2,451,996

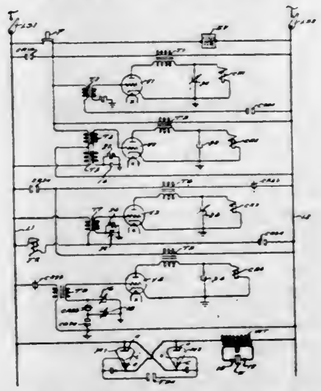
MANUFACTURE OF PHENOLS OR SALTS THEREOF

Daniel Tyrer, Stockton-on-Tees, England

No Drawing. Application August 1, 1947, Serial No. 765,651. In Great Britain August 13, 1942

6 Claims. (Cl. 260—628)

1. A process for the manufacture of phenols or salts thereof which comprises, preparing an intimate solid mixture of an alkali metal salt of the sulphonic acid corresponding to the phenol desired, a caustic alkali in substantially the theoretical quantity and an additional particulate solid substance consisting of finely powdered carbon in such proportion, comprising at least 2 per cent. to about 30 per cent. of the weight of the sulphonic acid salt, that during the subsequent heating operation the reaction mixture does not froth or swell and remains in a substantially solid condition, and then heating the said solid mixture at a temperature ranging from 350 to 400° C. to cause the sulphonic acid salt and caustic alkali to undergo reaction.



2,451,997

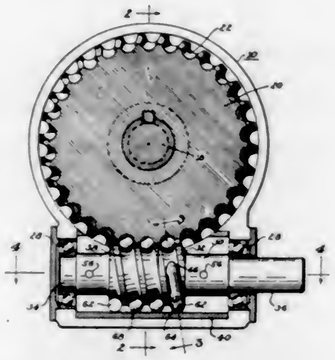
ELECTRONIC TIMING CONTROL SYSTEM

Gustav E. Undy, Detroit, Mich., assignor, by mesne assignments, to Weltronic Company, Oakland County, Mich., a corporation of Michigan

Application June 2, 1944, Serial No. 538,407

11 Claims. (Cl. 250—27)

11. In an electrical control system, a load circuit, operating means for controlling flow of energy through said circuit, a first network including a pair of current-controlling means and a pair of regulating means, one of said pair of regulating means controlling the time interval during which one of said pair of current-controlling means is in one controlling condition, the other of said pair of regulating means controlling the time interval during which the other of said pair of current-controlling means is in one controlling condition, said one current-controlling means acting upon actuation to a second controlling condition to place said other current-controlling means in its



said one controlling condition, said other current-controlling means acting upon actuation to its second current-controlling condition to place said one current-controlling means in its said one controlling condition, means actuated by said other current-controlling means to control the actuation of said operating means in accordance with the actuation of said other current-controlling means whereby the flow of energy through said load circuit is controlled, a second network comprising a pair of condensers of differing charge capacities for determining the time period of operation of said first network, means for initially charging one of said condensers, means operable periodically to provide a transfer of charge from said one condenser to the other of said condensers, means to discharge said other condenser during the time interval between said charge transfers, and means responsive to a predetermined minimum charge of said one condenser to render said first network ineffective.

2,451,998

BALL-BEARING WORM GEAR

Eric C. Wahlberg and Robert C. Lampe, Stamford, Conn., assignors to Electrolux Corporation, New York, N. Y., a corporation of Delaware

Application February 3, 1945, Serial No. 576,070
3 Claims. (Cl. 74—458)

1. Worm gearing comprising a worm gear having recesses extending across its peripheral edge, a hollow worm having a spiral groove extending therearound and having radial passages connecting opposite ends of said groove with the hollow interior, a pair of members within said interior formed with elbow passages opening in radial and axial directions, said members being located with the radial openings communicating with the inner ends of said radial passages, a sleeve in said interior between said members and having an axial bore connecting the axial openings in the members to thereby provide a passageway connecting opposite ends of said spiral groove, means for rotatably mounting said worm gear and said worm about axes substantially at right angles to each other and so that successive turns of said spiral groove are in alignment with successive recesses, a plurality of balls in said spiral groove and passageway and extending into the recesses which are in alignment with the groove, and means for retaining the balls in those portions of said groove which are not aligned with said recesses.

2,451,999

HYDRAULIC FLUIDS

Kenneth E. Walker, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original application September 27, 1941, Serial No. 412,609. Divided and this application September 28, 1944, Serial No. 556,294
3 Claims. (Cl. 252—79)

1. A hydraulic fluid for use in fluid operating apparatus consisting essentially of per 100 parts by weight, 50 to 75 parts of the monoethyl ether of ethylene glycol and from 50 to 25 parts of blown castor oil.

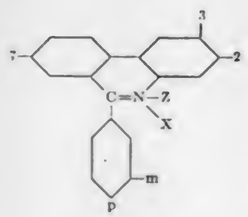
2,452,000

PROCESS FOR THE RECOVERY OF ENZYMES FROM AQUEOUS SOLUTIONS AND PRODUCT OBTAINED THEREBY

James S. Wallerstein and Ralph Thomas Alba, New York, N. Y., assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y., a corporation of New York

No Drawing. Application March 24, 1945, Serial No. 584,732
11 Claims. (Cl. 195—63)

11. The method of removing and recovering from aqueous solutions an enzyme active within the range of pH 5 to 11, which comprises precipitating the enzyme by means of a water-soluble alkali cook lignin from a solution having a pH value below 5 but not substantially below 4 so as to form a complex insoluble at such pH value but soluble at a pH value of about 5.0 and higher.



2,452,001

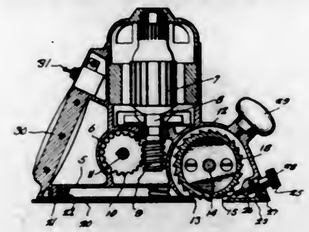
PHENANTHRIDINIUM COMPOUNDS AND METHOD OF MAKING THEM

Leslie Percy Walls, Teddington, England, assignor to The Imperial Trust for the Encouragement of Scientific and Industrial Research, Westminster, England

No Drawing. Application September 2, 1944, Serial No. 552,579. In Great Britain September 4, 1943
14 Claims. (Cl. 260—286)

7. New trypanocidal agents being di-substituted phenanthridinium salts of the general formula

wherein X and Y are respectively the cation and anion of an alkylating agent; and wherein any two of the positions 2–7, 3–7, 7–p, 7–m, 3–p, 3–m, are NHCOOAlk, in pairs and where the unpaired positions are H.



10. Process for the production of carbalkoxyamide (9 - phenyl - phenanthridinium) salts, wherein a corresponding amino-9-phenyl-phenanthridinium salt is reacted with a haloformic ester.

2,452,002

PORTABLE ELECTRIC CLEANER AND SCRAPING TOOL

Altie Clay Ward, Pacific Palisades, Calif.

Application July 26, 1945, Serial No. 607,197
1 Claim. (Cl. 144—115)

A scraper comprising a base, a front end drum housing on the base having a bottom opening therein, a scraper drum rotatably mounted in said housing cross-wise of the base with the lower portion thereof projecting through said opening, a gear housing on the base at the rear of the drum housing, a shaft rotatably mounted in the gear housing cross-wise of said base, a worm gear keyed to the shaft within said gear housing, a side housing on said drum and gear housings, a sprocket and chain drive in the side housing operatively connecting said shaft to said drum, a motor housing surmounting the drum and gear housings, and a motor in said motor housing having a vertical armature shaft terminating in a worm and extending into the gear housing and operatively engaging said worm gear.

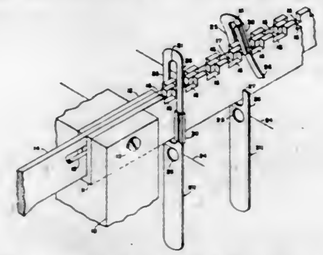
2,452,003

PREPARATION OF ZINC PROPIONATE

Arthur George Weber, Wilmington, and Clement H. Hamblet, Gordon Heights, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 30, 1945, Serial No. 632,082
4 Claims. (Cl. 260—429)

1. A continuous process for the preparation of zinc propionate by reacting propionic acid with metallic zinc which comprises reacting metallic zinc with an aqueous solution of propionic acid at a temperature between 50° and 200° C. while continuously during the reaction passing air through the reacting mixture the reaction being conducted by passing the reactants continuously into and the products continuously out of the reaction zone.



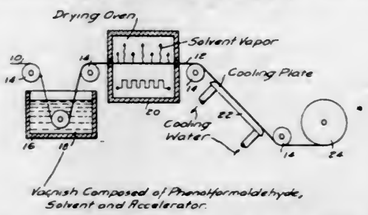
2,452,004

WARP STOP MOTION DROP WIRE

Harry F. Weddington, Salisbury, N. C.

Application September 30, 1947, Serial No. 776,983
4 Claims. (Cl. 139—368)

1. In a loom having a stop motion mechanism comprising a bar or bars for supporting a plurality of drop wires, each of said drop wires having an elongated vertically disposed slot of greater height than the height of the supporting bar, adapted to be penetrated by the supporting bar, each drop wire having a hole therethrough through which the warp yarn is passed for holding the same in elevated position, one side portion of the drop wire on one side of the elongated slot being severed and a sleeve slidably mounted on said severed side portion and adapted to be moved over the severed portion to hold the two portions in alignment with each other, said sleeve also being slidable to a position to where it will not cover the point of severance so that



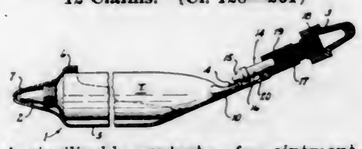
the drop wire may be removed from the supporting bar.

2,452,005

METHOD OF COATING WITH SYNTHETIC RESIN CONTAINING AN ACCELERATOR, AND RESIN COMPOSITION

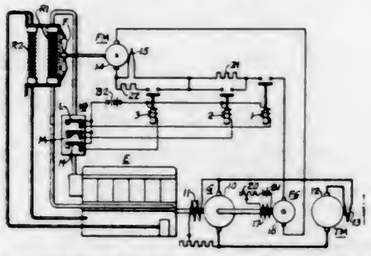
William C. Weltman, Wilkinsburg, Pa., and Thomas F. Dixon, Pasadena, Calif., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 10, 1945, Serial No. 587,508
6 Claims. (Cl. 117—161)



1. A resin composition, comprising in combination, an A-stage partially reacted solvent soluble phenol-aldehyde thermosetting resin derived by reacting a phenol from the group consisting of phenol, cresols, and cresylic acid with an aldehyde from the group consisting of formaldehyde and its polymers, from 0.1% to 2% of the weight of the resin of an accelerator to expedite gelation of the resin when subjected to heating to a condition short of the final infusible state, the accelerator having been added after the resin has been partially reacted to the A-stage, the accelerator being selected from the group composed of primary saturated aliphatic amines having no other reactive groups than the amine groups, having nitrogen attached to a methylene group and having less than 5 carbon atoms per amino group, the primary organic amines having a boiling point above 50° C., and a solvent for the resin and accelerator.

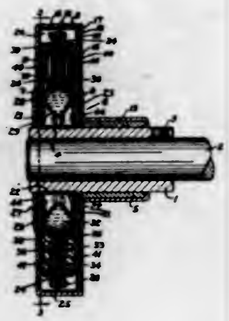
5. In a process for applying a partially reacted A-stage thermosetting phenolic resin derived by reacting a phenol from the group consisting of phenol, cresols, and cresylic acid with an aldehyde from the group consisting of formaldehyde and its polymers in solution in a volatile solvent to fibrous material, the steps comprising incorporating in the solution of the A-stage phenolic resin from 0.1% to 2% of the weight of the resin of a primary saturated aliphatic organic amine having nitrogen attached to a methylene group, the organic amine having no other reactive group than the amine group, the organic amine having a boiling point above 50° C. and not more than five aliphatic carbon atoms per primary amino group, applying the solution of phenolic resin to



the fibrous material and subjecting the treated fibrous material to heat in order to remove the solvent and to further polymerize the phenolic resin to a condition short of the final infusible state, the organic amine providing for a more rapid reaction as compared to the reaction without the organic amine.

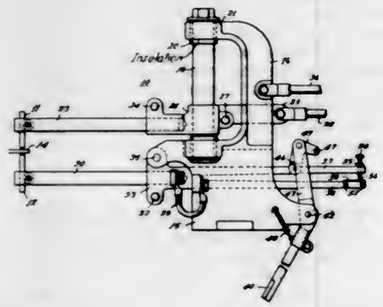
2,452,006
OINTMENT APPLICATOR
Mack M. Werner, Brooklyn, N. Y.
Application June 26, 1947, Serial No. 757,257
12 Claims. (Cl. 128—261)

1. A sterilizable protector for ointment tubes and the like including in combination a tube-supporting container in which an ointment tube may be removably housed, said container having a sheath for enclosing the dispensing end of said tube, and an opening in said sheath for delivery of ointment extruded from the tube, said container having means at the end opposite said dispensing end for holding said tube in said container.



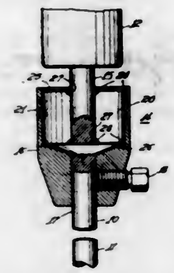
2,452,007
THERMOSTATIC REGULATION FOR ENGINE COOLING
Thelbert L. Weybrew, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 12, 1945, Serial No. 622,050
5 Claims. (Cl. 123—178)

5. In a system for controlling the temperature of an internal combustion engine having a radiator for cooling fluid and a plurality of temperature responsive devices disposed to operate successively, in combination, a fan motor, a generator driven by the engine to supply power to the fan motor, a plurality of resistors for controlling the generator voltage by varying its exciting current, and a plurality of switches operable successively under the control of said temperature responsive devices for shunting said resistors to vary the voltage applied to and the speed of the fan motor.



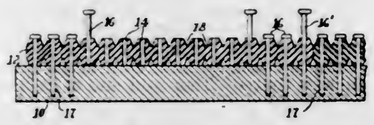
2,452,008
MERCURY CLUTCH
Arthur M. Wickwire, Mountain Lakes, N. J., and Hans J. Zimmermann, Canton, Ohio, assignors, by mesne assignments, to Automatic Steel Products, Inc., a corporation of Delaware
Application March 2, 1945, Serial No. 580,682
21 Claims. (Cl. 192—105)

1. In a liquid actuated clutch wherein driving engagement between driving and driven members is established upon rotation of one of the members by liquid thrown centrifugally outwardly in a chamber formed in one of the members—a flexible liquid containing gland, means confining a body of liquid within said gland, a rotatable driving member including torque plate means adjacent the gland fixed to the driving mem-



ber for rotation therewith, there being windows formed in the torque plate means, friction shoe segments carried in said windows for axial movement relative to the torque plate means, pressure plate means interposed between the gland and friction shoe means, and a driven member housing having an engaging surface adjacent the friction shoe means.

2,452,009
WELDING APPARATUS
Foster R. Woodward, Pleasant Ridge, Mich., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 21, 1946, Serial No. 671,214
8 Claims. (Cl. 219—4)

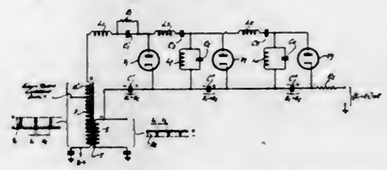


1. In a resistance welding machine, a fixed electrode, a relatively movable electrode, a movable support having rigidly connected bifurcated portions and arranged to support the movable electrode at one end, means actuating the movable support to produce welding pressure between the electrodes, and switch means responsive to predetermined deformation between the bifurcated portions of the support controlling energization of the electrodes.

2,452,010
WELDING APPARATUS
Foster R. Woodward, Pleasant Ridge, Mich., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 21, 1946, Serial No. 671,215
6 Claims. (Cl. 219—4)

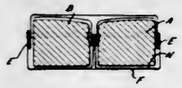
1. A holder for a spot welding electrode comprising, a stem, a socket for the electrode having a recess arranged to receive the stem, and means connecting the stem and socket including relatively flat resilient current conducting means positioned in the recess integrally connected to the stem and to the socket on opposite sides of the stem.

2,452,011
HAND WEAVING DEVICE
Hyman M. Zippel, Philadelphia, Pa.
Application February 24, 1947, Serial No. 730,233
17 Claims. (Cl. 139—34)



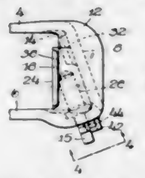
4. A device of the character described comprising a square support having a plurality of equally spaced holes in rows at right angles to each other for the reception of pegs about which warp and weft threads are adapted to be wound during weaving, said rows of holes being parallel to the edges of the support, the distance between each edge of the support and the adjacent row of holes being equal to one half the distance between adjacent rows of holes, whereby a plurality of supports may be assembled so that the distance between adjacent rows of holes of two supports placed side by side are as equally spaced from each other as those in the other portions of the supports.

2,452,012
NITRILES
Paul J. Flory, Kent, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application February 20, 1946, Serial No. 649,133
4 Claims. (Cl. 260—464)



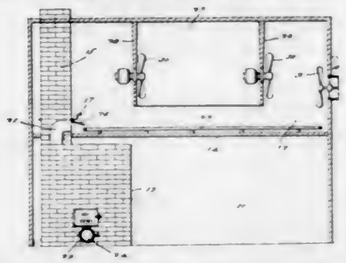
4. As a new chemical compound, a compound selected from the group consisting of 3,3,5,5,3',3',5',5' - octa(beta - cyanoethyl) - 4,4'-diketodicyclohexyl; bis[3,3,5,5 tetra(beta-cyanoethyl)-4-ketocyclohexyl]methane; and 2,2 bis-[3,3,5,5 tetra(beta - cyanoethyl) - 4 - ketocyclohexyl] propane.

2,452,013
POWER SUPPLY
Albert Wiley Friend, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 29, 1945, Serial No. 631,732
7 Claims. (Cl. 171—97)



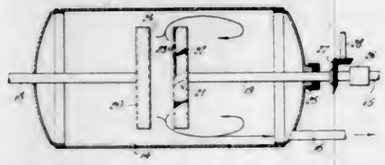
1. In a system for obtaining a substantially smooth D.-C. output voltage from an input comprising a series of substantially unidirectional voltage pulses: the combination of a first rectifying unit comprising a unilateral conducting device and an energy-storage element connected in series relation across said unidirectional pulse input; a second rectifying unit comprising a further unilateral conducting device, a further energy-storage element connected in series relation with said further unilateral conducting device, and a parallel inductance-capacitance circuit designed to be resonant at a multiple of the frequency of the said input pulses, said parallel inductance-capacitance circuit being connected in shunt with the series combination of said further unilateral conducting device and said further energy-storage element; and means for coupling together said first and second rectifying units so that the respective energy-storage elements of the units are in series relation.

2,452,014
DUPLEX PACKAGE AND METHOD OF MAKING THE SAME
George A. Kihn, Richmond, Staten Island, N. Y., assignor to American Machine and Foundry Company, a corporation of New Jersey
Application August 9, 1944, Serial No. 548,758
9 Claims. (Cl. 99—173)



1. The method of forming a wrapped bakery article of the group consisting of sliced and unsliced loaves of bread which comprises completely wrapping said article and securing the wrapper about the same to form a wrapped package, then dividing said package into two substantially equal partially wrapped parts, each of said parts being enclosed within said wrapper except for one end, turning each of said parts end for end and bringing the fully wrapped ends thereof into contact to form a partially wrapped loaf assembly, then completely wrapping said assembly including folding the projecting wrapper ends about the exposed ends of each of said partially wrapped parts, and securing said wrapper about said assembly to form a completely wrapped composite package.

2,452,015
ADJUSTING MEANS FOR YOKE ARRANGEMENTS
Edmund P. Kinne and Frank H. Kayler, Alliance, Ohio, assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 3, 1944, Serial No. 543,382
10 Claims. (Cl. 213—67)

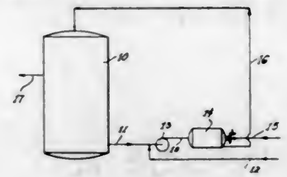


1. In a draft arrangement, a yoke having vertical and horizontal webs defining a rectangular opening for a draft gear, a diagonal member at the rear of said yoke defining with said webs a substantially triangular pocket, means in said pocket projecting into said opening for adjusting the effective length thereof, comprising a wedge slidable along said member, an adjusting screw within said pocket in threaded engagement with said wedge for moving said wedge upwardly along said member, thereby adjusting the effective length of said opening, means on said diagonal member and said wedge for maintaining said wedge in normal vertical position, said last-mentioned means comprising a T-shaped lug on said member and a complementary pocket in said wedge opening at the top thereof and receiving said lug, the lower of said horizontal webs having a diagonal portion forming a seat, a shoulder on said screw seated on said seat, and an elongate slot in said lower web extending through a portion of said seat, said screw having a T-shaped shank adapted to pass through said slot in a single rotatable position of the screw, and releasable engaging means on said yoke and said screw for fixing said screw against rotation.

2,452,016
SMOKEHOUSE FOR FISH AND OTHER FOODSTUFF
Alfred L. Lyon, Eastport, Maine; Zelma A. Lyon, Roscoe C. Emery, and Charles C. Norton, all of Eastport, Maine, executors of said Alfred L. Lyon, assignors to Zelma A. Lyon, Roscoe C. Emery, and Charles C. Norton, all of Eastport, Maine, cotrustees.
Application November 27, 1943, Serial No. 511,976
6 Claims. (Cl. 99—259)

4. A smoke-house comprising an oven, a closed-in fireplace within said oven and spaced from the walls and top of said oven, outlet means adjacent the top of said fireplace for conducting smoke between said walls of said oven and fireplace, means for regulating the draft in said fireplace, a chamber above said oven, a smoke room having the bottom open suspended in said chamber, a smoke-stack extending from said oven through said chamber, selectively operable means in said stack for directing smoke from said oven to said chamber and said smoke room or through said stack.

2,452,017
METHOD OF MIXING ALKYLATION REACTANTS
Julius B. Middleton, Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application December 10, 1941, Serial No. 422,362
1 Claim. (Cl. 260—683.4)

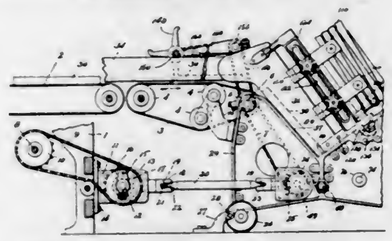


In an alkylation process which includes maintaining a fluid reaction mass resulting from reaction of an olefin with an isoparaffin in the presence of a liquid acid catalyst, withdrawing a portion of said mass for separation of product therefrom, withdrawing a second portion of said mass, adding fresh reactants and catalyst thereto and returning said second portion admixed with fresh reactants and catalyst to said reaction zone; the method of admixing said catalyst and reactants with said second portion which comprises adding fresh catalyst to said second portion and injecting the same as a plurality of parallel fine catalyst mixture streams longitudinally of a substantially cylindrical mixing zone maintained substantially full of liquid, withdrawing a fluid mixture from the end of said mixing zone toward which said catalyst mixture streams are directed, inducing cyclic flow of fluids in said mixing zone to cause fluids to flow longitudinally along the axis thereof from said end of said mixing zone toward said catalyst mixture streams and return flow along an annular path surrounding said flow toward said streams, injecting fresh reactants as a plurality of fine reactant streams into said return flow and rotating the points of injection of said reactant streams about the axis of said mixing zone; whereby said fresh reactants are dispersed uniformly through a stream of reaction mixture in which fresh catalyst has been uniformly distributed.

2,452,018
ALKYLATION PROCESS
Julius Blake Middleton, New York, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Continuation of application Serial No. 422,362, December 10, 1941. This application November 5, 1945, Serial No. 626,865
2 Claims. (Cl. 260—683.4)

1. A process for the catalytic alkylation of an alkylatable hydrocarbon with an alkylating agent in the presence of a liquid alkylation catalyst which comprises introducing the alkylatable hydrocarbon and the liquid alkylation catalyst into a reaction zone, maintaining a relatively large body of liquid reaction mixture under alkylating conditions in said zone, agitating said body of reaction mixture, introducing the alkylating agent into said body of reaction mixture through

an orifice, and throughout said introduction moving said orifice at high speed through the body of reaction mixture in said zone and thereby effecting rapid dispersal of said alkylating agent

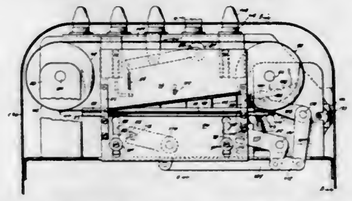


throughout said body of reaction mixture, preventing local concentrations of the alkylating agent in said body and maintaining the concentration of the alkylating agent throughout the reaction zone at the desired minimum.

2,452,019
CLAMP FOR ELECTRIC FUSES, ETC.
Raymond N. Rowe, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application July 1, 1947, Serial No. 758,391
9 Claims. (Cl. 173—328)

1. A fuse clip having two contact jaws, one jaw having two spaced parts with a space between the parts, a U-shaped clamping member extending through said space and having two extensions bent to overlap edges of the two spaced parts of the one jaw and a spring interposed between said clamping member and the other jaw.

2,452,020
BOX STACKER
Clayton Straw, Henniker, N. H., assignor to Kingsbury & Davis Machine Company, Contoocook, N. H., a corporation of New Hampshire
Application February 10, 1943, Serial No. 475,453
4 Claims. (Cl. 214—7)

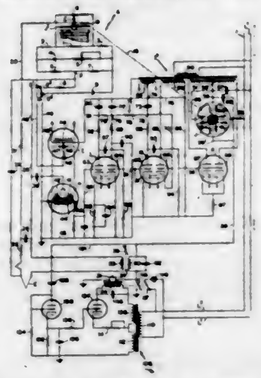


1. Stacking devices for boxes having in combination means feeding the boxes one by one, a surface supporting the boxes, a pusher engaging the boxes one by one and pushing them in the same direction over such supporting surface, and means varying the angular inclination of the pushing surface of the pusher by causing one end of the pusher to be in the lead during alternate working strokes and the other end to be in the lead during the intermediate working strokes.

2,452,021
TREATMENT OF DRILLING FLUIDS
Truman B. Wayne, Houston, Tex.
No Drawing. Application June 5, 1939, Serial No. 277,564
12 Claims. (Cl. 252—8.5)

1. An aqueous well drilling fluid containing a gel-forming constituent and a small percentage of a degelling poly-derivative of at least one water-soluble derivative of a normally solid acidic oxide as herein defined, of an element of one of the groups III, IV, V and VI of the periodic system.

2,452,022
TICKET MACHINE
Richard I. N. Weingart, Glen Head, and Torkel E. Torkelson, Baldwin, N. Y., assignors to General Register Corporation, Long Island City, N. Y., a corporation of New York
Application May 2, 1947, Serial No. 745,672
12 Claims. (Cl. 235—98)



7. In a ticket machine provided with means for severing tickets from the stub portions thereof, the combination of means for counting the severed tickets, such means comprising a frame, a member mounted in the frame having a longitudinal opening providing a channel of sufficient length to receive a plurality of interconnected ticket units to be severed, a wheel journalled adjacent one end of the channel and arranged to be rotated by movement of the ticket relative to the wheel, means for moving the severed ticket relative to the wheel, and a counter operatively connected with the wheel.

2,452,023
SAFE FAILURE MEASURING AND CONTROLLING APPARATUS
Rudolf F. Wild, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application March 15, 1947, Serial No. 735,009
42 Claims. (Cl. 318—28)

1. The combination with electrical measuring and control apparatus comprising an electronic amplifier having an input circuit and an output circuit, measuring means connected to said input circuit and responsive to variations in the value of a variable quantity and adapted on a change in said quantity to impress an alternating current signal indicative of said change and of relatively low frequency on said input circuit, and a mechanism connected to said output circuit and actuated by and in selective accordance with the relatively low frequency signal impressed on said input circuit, of means coupling said input and output circuits to transfer energy from said output circuit to said input circuit and thereby impress a relatively high frequency signal on the relatively low frequency signal impressed on said input circuit, the magnitude of the relatively low frequency signal being proportioned to carry the relatively high frequency signal through said amplifier when said apparatus is in its normal

operative condition and to attain a value high enough to cause the relatively high frequency signal to be clipped or cut off in said amplifier on the development of an apparatus defect prevent-

ing normal operation of said apparatus, and control means for producing a control effect when the relatively high frequency signal disappears from said output circuit.

2,452,024

PREPARATION OF ALUMINUM SULFATE

William S. Wilson, Brookline, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 21, 1943, Serial No. 507,181
10 Claims. (Cl. 23—123)

1. The method of preparing water-soluble substantially anhydrous neutral aluminum sulfate which comprises preparing a solution of neutral aluminum sulfate containing at least 15% Al_2O_3, maintaining said solution at a temperature not less than 75° C. and above that temperature at which the amorphous solid solution of neutral aluminum sulfate will form and not higher than about 105° C. for at least three hours and until the solution has finally set to a readily disintegrable solid mass of crystals of substantially the same mass as the original solution, and then dehydrating the resulting crystals to the anhydrous state.

10. The method of preparing a mixture of water-soluble crystals of neutral and basic aluminum sulfate having an average basicity varying from neutral to 22% which comprises preparing a solution of aluminum sulfate having an average basicity within the above range and containing from 13 to 17% Al_2O_3, and maintaining said solution at a temperature not less than 75° C. and above that temperature at which the amorphous solid solution of neutral aluminum sulfate will form and not higher than about 105° C. for at least three hours and until the solution has finally set to a readily disintegrable solid mass of crystals of substantially the same mass as the original solution.

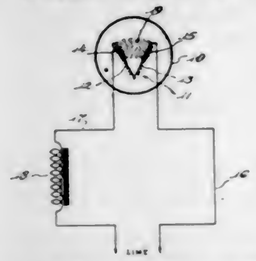
2,452,025

BRUSH SUPPORT

Herman Jonah Dunn, New Haven, Conn.

Application July 5, 1946, Serial No. 681,509
1 Claim. (Cl. 248—110)

Means for supporting a paint brush in a horizontal position over a paint pail, comprising a length of wire bent to form upwardly extending loops at each end thereof, one side of each loop engaging the inside of the pail and the other side



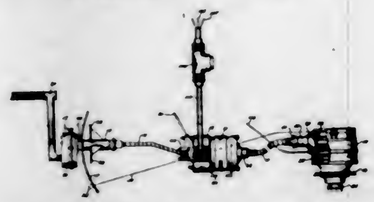
of the loop engaging the outside of the pail and the free ends of the wire being rebent in curvilinear shape to facilitate application of the brush support on the paint pail.

2,452,026

GASEOUS DISCHARGE LAMP CIRCUIT

Albert E. Feinberg, Chicago, Ill., assignor to Advance Transformer Co., Chicago, Ill., a corporation of Illinois

Application June 11, 1947, Serial No. 753,951
4 Claims. (Cl. 315—283)



1. In a circuit for providing proper regulation for a gaseous discharge lamp in which the voltage is dropped from about 24 to 12 upon the striking of the arc within the lamp, a reactive component connected in series with the lamp and a conventional 110 volt alternating current line and comprising a single winding choke coil characterized by a high leakage reactance at a low flux density.

2,452,027

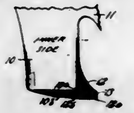
ENGINE STARTING SYSTEM

Ralph M. Heintz, Cleveland, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware

Original application September 24, 1942, Serial No. 459,566. Divided and this application October 13, 1943, Serial No. 506,023
3 Claims. (Cl. 123—179)

1. A starting system for an internal combustion engine in a vehicle comprising an inertia starter unit mounted on said engine, an electric motor mounted on said vehicle adjacent said starter unit so as to be subject to less vibration than said starter unit, a flexible shaft drive connecting one end of said motor with said starter unit, an overrun-

ning clutch incorporated in the other end of said motor and having its driven element connected with the motor shaft, a hand crank receiving unit mounted on said vehicle in an accessible position, and a flexible shaft drive connecting said crank receiving unit with the driving element of said clutch.



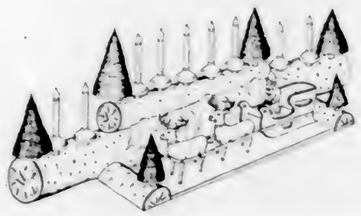
2,452,028

ANTISPLASH CONSTRUCTION FOR FOOTWEAR

Curry Ora Walper, Kitchener, Ontario, Canada

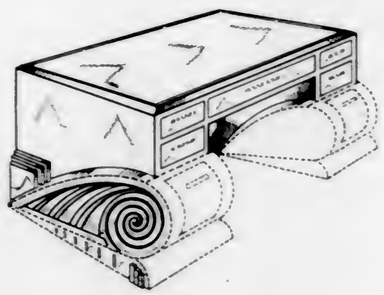
Application July 10, 1945, Serial No. 604,198
4 Claims. (Cl. 36—70)

1. In a heel for footwear, a conductor for directionally influencing molecularly adhered drip drainage across the heel substantially from the inner to the outer side thereof, consisting of a deformation of the heel breast characterized by the lower portion thereof extending in advance of its normal plane as a tongue and free of the

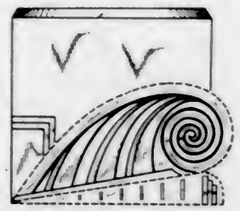


shank portion of the footwear, said extended portion running in an oblique sweep substantially from the inner to the outer side so that the tip of said extended portion lies in the region of the outer side of the footwear.

DESIGNS



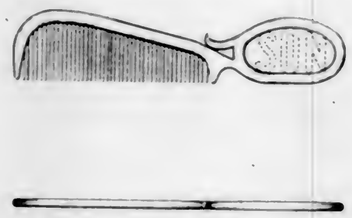
OCTOBER 19, 1948



151,424
DESIGN FOR A COUNTER DECORATIVE UNIT OR THE LIKE
Harold A. Bahr, Greendale, Wis.
Application April 19, 1947, Serial No. 138,505
Term of patent 3½ years
(Cl. D29—1)

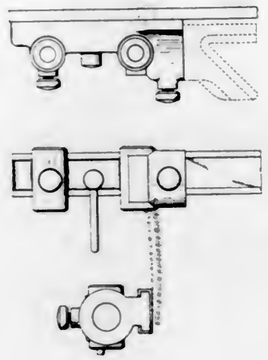
The ornamental design for a counter decorative unit or the like, as shown.

151,425
DESIGN FOR A DESK
Jack Barofsky, Los Angeles, Calif.
Application February 8, 1947, Serial No. 136,778
Term of patent 14 years
(Cl. D33—7)



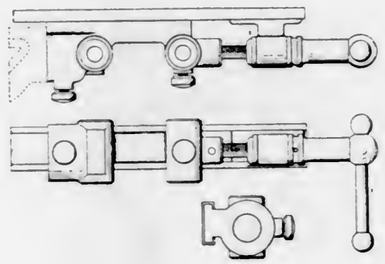
The ornamental design for a desk, as shown and described.

151,426
DESIGN FOR AN ADVERTISING FIGURINE
Emerson C. Bishop, Los Angeles, Calif.
Application April 18, 1947, Serial No. 138,473
Term of patent 14 years
(Cl. D1—3)



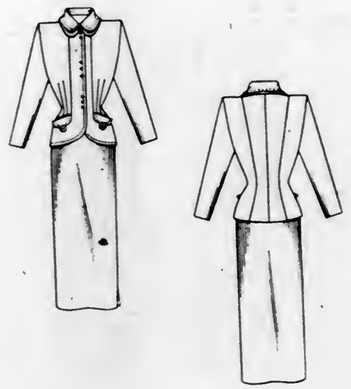
The ornamental design for an advertising figurine, as shown.

151,427
DESIGN FOR A HAIR COMB
Allan Bresn, Chicago, Ill.
Application March 26, 1947, Serial No. 137,917
Term of patent 14 years
(Cl. D86—8)



The ornamental design for a hair comb, as shown.

151,428
DESIGN FOR A VISE-JAW HOLDER AND SUPPORT THEREFOR
Herman E. Clauss, Affton, Mo.
Application March 1, 1946, Serial No. 127,000
Term of patent 7 years
(Cl. D54—13)

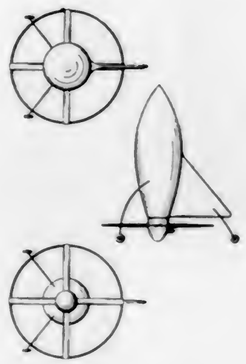


The ornamental design for a vise-jaw holder and support therefor, as shown and described.

151,429
DESIGN FOR AN ADJUSTABLE VISE-JAW HOLDER AND SUPPORT THEREFOR
Herman E. Clauss, Affton, Mo.
Application March 1, 1946, Serial No. 127,001
Term of patent 7 years
(Cl. D54—13)

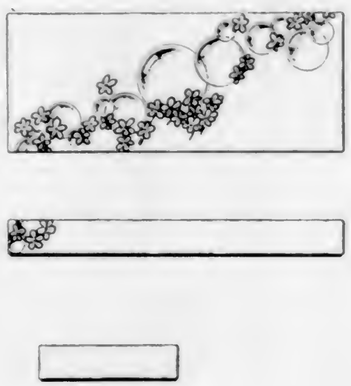
The ornamental design for an adjustable vise-jaw holder and support therefor, as shown and described.

151,430
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application April 21, 1948, Serial No. 145,873
Term of patent 3½ years
(Cl. D3—4)



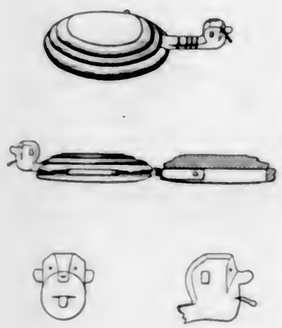
The ornamental design for a suit, substantially as shown.

151,431
DESIGN FOR A LIPPED GLASS OR SIMILAR ARTICLE
Benjamin Cooper, New York, N. Y., Albert F. Hohmann, Teaneck, N. J., and Alfons Bach, Stamford, Conn.; said Hohmann and said Bach assignors to said Cooper
Application February 1, 1947, Serial No. 136,612
Term of patent 7 years
(Cl. D36—8)



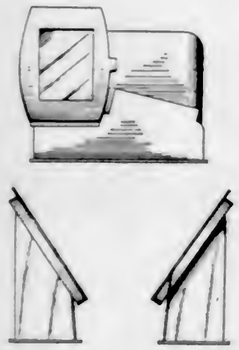
The ornamental design for a lipped glass or similar article, as shown.

151,432
DESIGN FOR A TOY AIRCRAFT OR SIMILAR ARTICLE
Wiley K. Crowder, Detroit, Mich.
Application December 31, 1946, Serial No. 135,868
Term of patent 14 years
(Cl. D34—15)



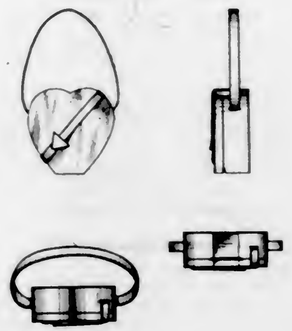
The ornamental design for a toy aircraft or similar article, substantially as shown.

151,433
DESIGN FOR A BOX
Charles F. Cruze and Rollin H. Killoran, Los Angeles, Calif., assignors to Robert H. Clark, Los Angeles, Calif.
Application May 27, 1946, Serial No. 130,129
Term of patent 7 years
(Cl. D58—12)



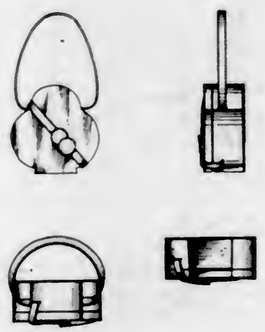
The ornamental design for a box, as shown.

151,434
DESIGN FOR A TOY FIGURE
Kenneth R. Eames, Worcester, Mass.
Application March 11, 1947, Serial No. 137,517
Term of patent 14 years
(Cl. D34—15)



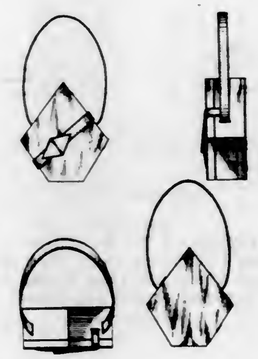
The ornamental design for a toy figure, as shown.

151,435
DESIGN FOR A DISPLAY STAND OR SIMILAR ARTICLE
Ralph Epstein, New York, N. Y., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J.
Application December 13, 1946, Serial No. 135,488
Term of patent 3½ years
(Cl. D80—9)



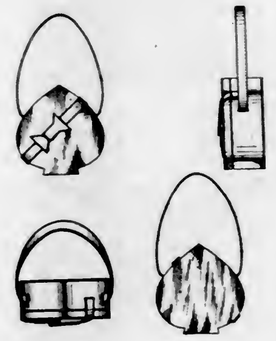
The ornamental design for a display stand or similar article, as shown.

151,436
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Ralph Ewing, New York, N. Y.
Application December 18, 1947, Serial No. 143,198
Term of patent 3½ years
(Cl. D87—3)



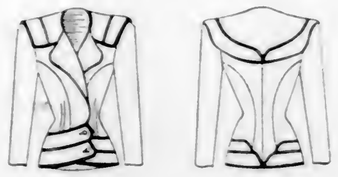
The ornamental design for a handbag or similar article, substantially as shown and described.

151,437
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Ralph Ewing, New York, N. Y.
Application January 15, 1948, Serial No. 143,816
Term of patent 3½ years
(Cl. D87—3)



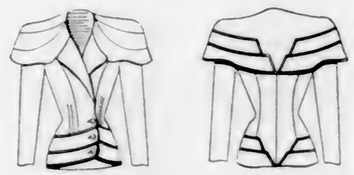
The ornamental design for a handbag or similar article, substantially as shown and described.

151,438
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Ralph Ewing, New York, N. Y.
Application January 15, 1948, Serial No. 143,817
Term of patent 3½ years
(Cl. D87—3)



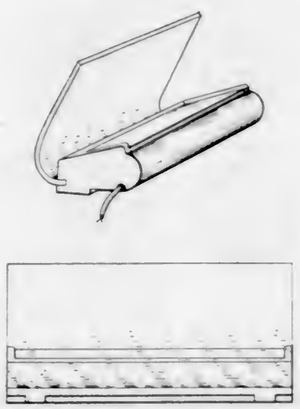
The ornamental design for a handbag or similar article, substantially as shown.

151,439
DESIGN FOR A HANDBAG OR SIMILAR ARTICLE
Ralph Ewing, New York, N. Y.
Application January 15, 1948, Serial No. 143,818
Term of patent 3½ years
(Cl. D87—3)



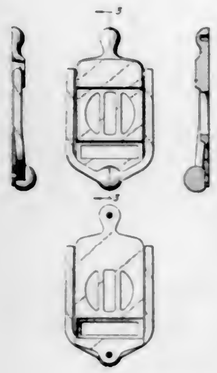
The ornamental design for a handbag or similar article, substantially as shown.

151,440
DESIGN FOR A JACKET
Nathan Finkelstein, New York, N. Y.
Application March 26, 1948, Serial No. 145,364
Term of patent 3½ years
(Cl. D3—4)



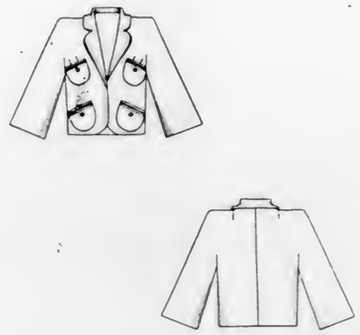
The ornamental design for a jacket, substantially as shown.

151,441
DESIGN FOR A JACKET
Nathan Finkelstein, New York, N. Y.
Application March 26, 1948, Serial No. 145,365
Term of patent 3½ years
(Cl. D3—4)



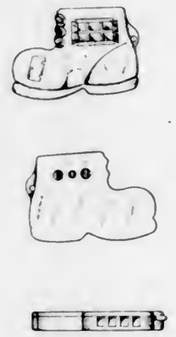
The ornamental design for a jacket, substantially as shown.

151,442
DESIGN FOR AN ILLUMINABLE SIGN
James R. Fitzgerald and Zelman S. Levine, Duluth, Minn.
Application April 10, 1946, Serial No. 128,442
Term of patent 7 years
(Cl. D1—12)



The ornamental design for an illuminable sign, substantially as shown.

151,443
DESIGN FOR A DOOR KNOCKER
Edward T. Fraim, II, Lancaster, Pa., assignor to E. T. Fraim Lock Company, Lancaster, Pa., a corporation of Pennsylvania
Application January 9, 1948, Serial No. 143,605
Term of patent 14 years
(Cl. D10—7)

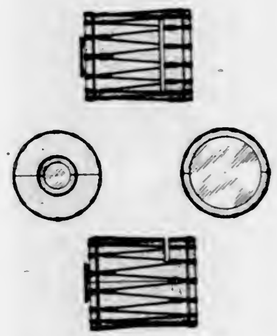


The ornamental design for a door knocker, as shown.

151,444
DESIGN FOR A JACKET
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application December 29, 1947, Serial No. 143,417
Term of patent 3½ years
(Cl. D3—4)

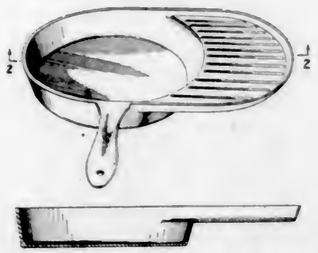
The ornamental design for a jacket, substantially as shown.

151,445
DESIGN FOR A MUSICAL TOY OR SIMILAR ARTICLE
Joseph Green, New York, N. Y.
Application April 24, 1947, Serial No. 138,589
Term of patent 3½ years
(Cl. D34—15)



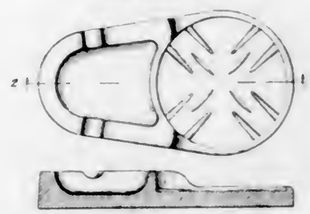
The ornamental design for a musical toy or similar article, as shown.

151,446
DESIGN FOR A SLIP
Harry J. Greenberger, Morristown, N. J.
Application September 17, 1946, Serial No. 133,373
Term of patent 14 years
(Cl. D3—26)



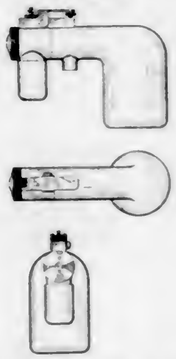
The ornamental design for a slip, substantially as shown and described.

151,447
DESIGN FOR A SLIDE VIEWER
Percy H. Halbriter, Los Angeles, Calif.
Application March 27, 1947, Serial No. 137,946
Term of patent 7 years
(Cl. D61—1)



The ornamental design for a slide viewer, substantially as shown.

151,448
DESIGN FOR A FRYING PAN
William Hallgarth, Hatboro, Pa., assignor of one-half to Marvin L. Gill, Lansdale, Pa.
Application July 16, 1946, Serial No. 131,603
Term of patent 14 years
(Cl. D44—1)



The ornamental design for a frying pan, as shown.

151,449
DESIGN FOR A COMBINED COASTER AND ASH TRAY
William E. Jenkins, Sierra Madre, Calif.
Application November 12, 1946, Serial No. 134,713
Term of patent 7 years
(Cl. D44—10)

The ornamental design for a combined coaster and ash tray, as shown.

151,450
DESIGN FOR A PAINT SPRAYING DEVICE OR SIMILAR ARTICLE
Wilbur Johndrew, Buffalo, N. Y.
Application May 31, 1946, Serial No. 130,290
Term of patent 3½ years
(Cl. D62—2)

The ornamental design for a paint spraying device or similar article, as shown.

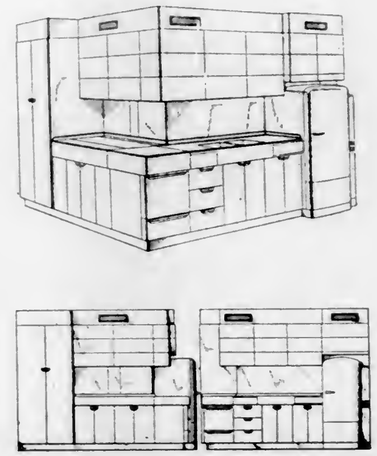
151,451
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,124
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,452
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,126
Term of patent 7 years
(Cl. D45—16)

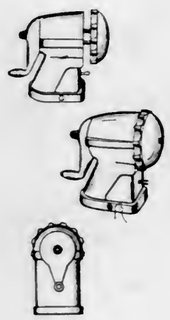
The ornamental design for a necklace or similar article, substantially as shown and described.

151,453
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,127
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,454
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 17, 1948, Serial No. 145,171
Term of patent 7 years
(Cl. D45—4)

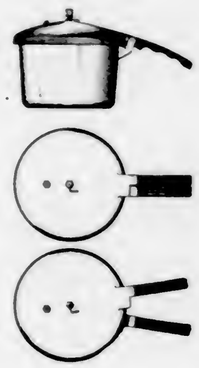


The ornamental design for a bracelet or similar article, substantially as shown and described.

151,455
DESIGN FOR A COMBINATION KITCHEN AND LAUNDRY UNIT
Leonard Keller, Tuckahoe, N. Y., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application February 25, 1947, Serial No. 137,162
Term of patent 14 years
(Cl. D33—19)

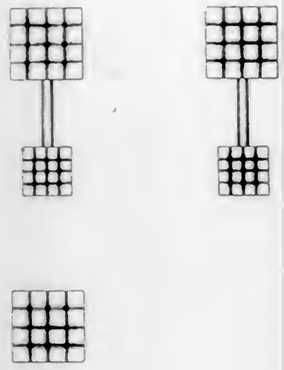
The ornamental design for a combination kitchen and laundry unit, substantially as shown.

151,456
DESIGN FOR A PENCIL SHARPENER
Åke Jarl Erik Kihlberg, Stockholm, Sweden, assignor to Instrumentaktiebolaget J. A. Palm, Stockholm, Sweden
Application December 31, 1946, Serial No. 135,856
In Sweden December 19, 1946
Term of patent 14 years
(Cl. D74—23)



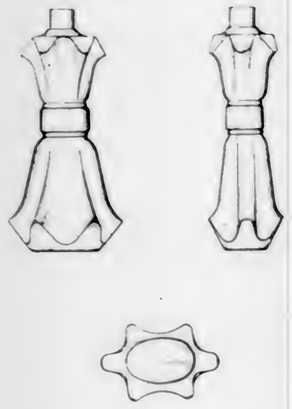
The ornamental design for a pencil sharpener, as shown.

151,457
DESIGN FOR A REFRESHMENT STAND
Carl F. Krueger, Webster Groves, and Albert R. Krueger, Northwoods, Mo.
Application October 9, 1947, Serial No. 141,836
Term of patent 14 years
(Cl. D13—1)



The ornamental design for a refreshment stand, as shown.

151,458
DESIGN FOR A PRESSURE COOKER
Ernoll Wayne La Barre, New York, N. Y., assignor of one-half to Herbert C. Leech, doing business as Herbert C. Leech Illustrators, New York, N. Y.
Application January 9, 1947, Serial No. 136,019
Term of patent 7 years
(Cl. D44—1)

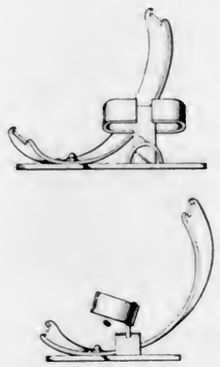


The ornamental design for a pressure cooker, as shown.

151,459
DESIGN FOR A CUFF LINK OR SIMILAR ARTICLE
Irving M. Lang, New York, N. Y.
Application May 13, 1947, Serial No. 139,015
Term of patent 3½ years
(Cl. D17—7)

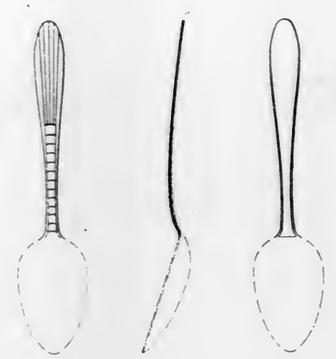
The ornamental design for a cuff link or similar article, substantially as shown and described.

151,460
DESIGN FOR A BOTTLE
Jean Bourges Mayfield, New York, N. Y., assignor to Joseph S. Lindemann, New York, N. Y.
Application August 13, 1946, Serial No. 132,484
Term of patent 14 years
(Cl. D58—9)



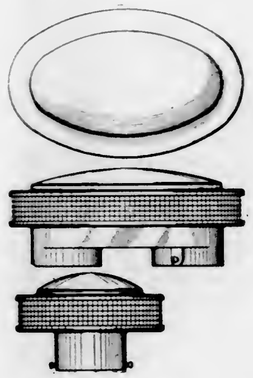
The ornamental design for a bottle, substantially as shown.

151,461
DESIGN FOR A HANDBAG
Leon E. Meadow, New York, N. Y.
Application March 24, 1948, Serial No. 145,319
Term of patent 3½ years
(Cl. D87—3)



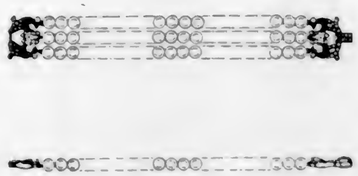
The ornamental design for a handbag, substantially as shown.

151,462
DESIGN FOR A DISPLAY STAND FOR WATCH BRACELETS AND BANDS
Charles A. Mealy, East Orange, N. J., assignor to Forstner Chain Corporation, a corporation of New Jersey
Application October 4, 1946, Serial No. 133,747
Term of patent 3½ years
(Cl. D80—9)



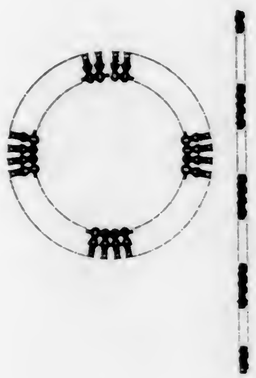
The ornamental design for a display stand for watch bracelets and bands, substantially as shown.

151,463
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF TABLEWARE
Arthur I. Meyer, New York, N. Y.
Application November 7, 1947, Serial No. 142,370
Term of patent 14 years
(Cl. D54—12)



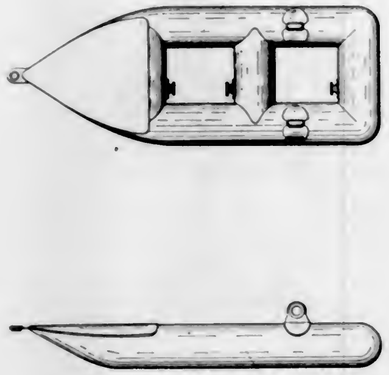
The ornamental design for a spoon or similar article of tableware, substantially as shown and described.

151,464
DESIGN FOR AN AIR FILTER
Niels H. F. Oisen, Dearborn, Mich.
Application June 20, 1947, Serial No. 139,845
Term of patent 14 years
(Cl. D62—4)



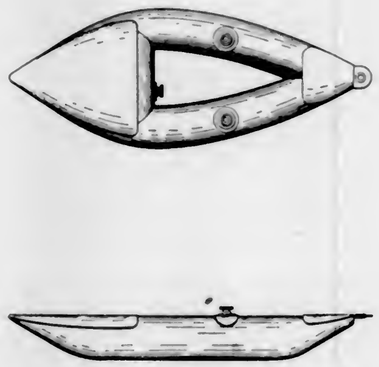
The ornamental design for an air filter, as shown.

151,465
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 13, 1948, Serial No. 145,077
Term of patent 7 years
(Cl. D45—4)



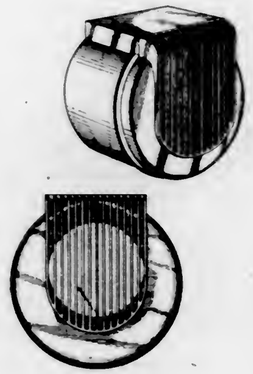
The ornamental design for a bracelet or similar article, substantially as shown and described.

151,466
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 31, 1948, Serial No. 145,457
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,467
DESIGN FOR A COLLAPSIBLE UTILITY BOAT
Thomas A. Potts, Ware, and Helen V. Waskiewicz, Warren, Mass.
Application May 10, 1946, Serial No. 129,580
Term of patent 14 years
(Cl. D71—1)



The ornamental design for a collapsible utility boat, as shown.

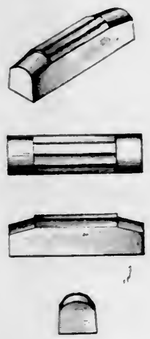
151,468
DESIGN FOR A COLLAPSIBLE KAYAK BOAT
Thomas A. Potts, Ware, and Helen V. Waskiewicz, Warren, Mass.
Application May 10, 1946, Serial No. 129,581
Term of patent 14 years
(Cl. D71—1)

The ornamental design for a collapsible kayak boat, as shown.

151,469
DESIGN FOR AN AUTOMOBILE HEATER CASING OR THE LIKE
Jean O. Reinecke, Oak Park, Ill., assignor to Motorola, Inc., a corporation of Illinois
Application November 13, 1946, Serial No. 134,745
Term of patent 14 years
(Cl. D14—6)

The ornamental design for an automobile heater casing or the like, substantially as shown and described.

151,470
DESIGN FOR AN ELECTRIC IRON
Allan E. Ross, Vancouver, British Columbia, Canada
Application August 12, 1947, Serial No. 140,832
In Canada May 3, 1947
Term of patent 14 years
(Cl. D49—6)

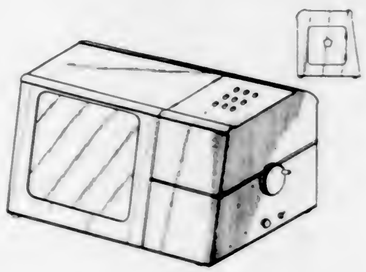


The ornamental design for an electric iron, as shown and described.

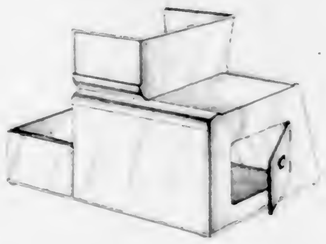
151,471
DESIGN FOR A GAS REGULATOR
Theodore A. St. Clair and William R. Eddy, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application January 14, 1946, Serial No. 125,547
Term of patent 14 years
(Cl. D52—2)

The ornamental design for a gas regulator, as shown

151,472
DESIGN FOR A JEWELRY COMPONENT
Louis Schorr, Brooklyn, N. Y.
Application October 17, 1947, Serial No. 141,976
Term of patent 7 years
(Cl. D45—1)

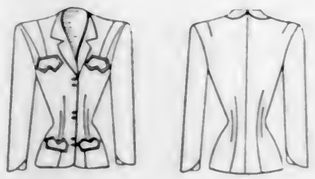


The ornamental design for a jewelry component, substantially as shown.

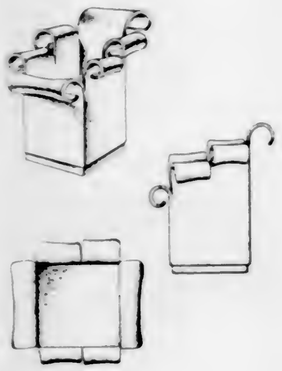


151,473
DESIGN FOR AN ANIMAL FEEDER
Robert C. Stahler, Portsmouth, Ohio
Application November 17, 1947, Serial No. 142,591
Term of patent 14 years
(Cl. D12—2)

The ornamental design for an animal feeder, as shown.

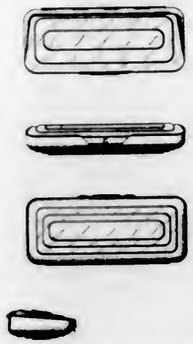


151,474
DESIGN FOR A MICROFILM-READER CASING
Nathan Sally Stern, New York, N. Y., assignor to American Measuring Instruments Corporation, New York, N. Y.
Application May 4, 1946, Serial No. 129,342
Term of patent 3½ years
(Cl. D61—1)



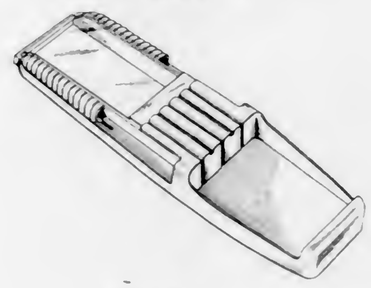
The ornamental design for a microfilm-reader casing, as shown.

151,475
DESIGN FOR A JACKET
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,357
Term of patent 3½ years
(Cl. D3—4)

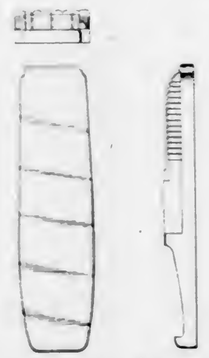


The ornamental design for a jacket, substantially as shown.

151,476
DESIGN FOR A CERAMIC VASE OR SIMILAR ARTICLE
Alwin L. Suman, Sierra Madre, Calif.
Application August 17, 1946, Serial No. 132,613
Term of patent 3½ years
(Cl. D29—28)

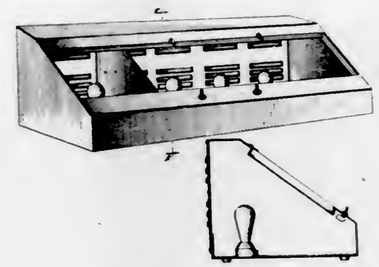


The ornamental design for a ceramic vase or similar article, substantially as shown.

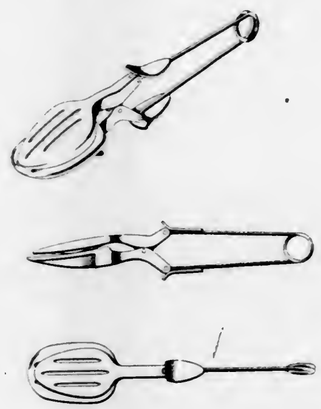


151,477
DESIGN FOR A SPECTACLE CASE
George Swikart, Yonkers, N. Y., assignor to Plastal Corporation, New York, N. Y., a corporation of New York
Application May 8, 1947, Serial No. 138,908
Term of patent 7 years
(Cl. D57—1)

The ornamental design for a spectacle case, as shown.

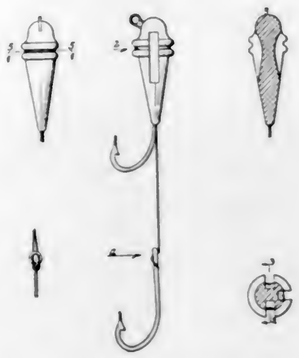


151,478
DESIGN FOR A KNIFE HOLDER
James V. Vevirit, Kenmore, N. Y., assignor to Union Cutlery Company, Inc., Olean, N. Y., a corporation of New York
Application September 25, 1946, Serial No. 133,556
Term of patent 14 years
(Cl. D44—29)



The ornamental design for a knife holder, as shown.

151,479
DESIGN FOR A LIGHT BOX FOR VIEWING COLOR TRANSPARENCIES
William P. Way, Floral Park, N. Y.
Application March 23, 1946, Serial No. 127,853
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a light box for viewing color transparencies, substantially as shown and described.

151,480
DESIGN FOR A SALAD SERVER
Alexander C. Weiss, Chicago, Ill.
Application November 27, 1946, Serial No. 135,134
Term of patent 7 years
(Cl. D44—4)

The ornamental design for a salad server, as shown.

151,481
DESIGN FOR AN EELSKIN RIG FOR BASS
John Williamowicz, Worcester, Mass.
Application January 2, 1947, Serial No. 135,891
Term of patent 7 years
(Cl. D31—4)

The ornamental design for an eelskin rig for bass, as shown

151,482
DESIGN FOR A WALLPAPER
Binnie B. Wilson, Chagrin Falls, Ohio
Application June 21, 1947, Serial No. 139,864
Term of patent 3½ years
(Cl. D59—10)

The ornamental design for a wallpaper, as shown and described.

T. M. (Act of 1946)	239—No.	503,334	to No.	503,572, inclusive
T. M. Renewals	94			
Reissues	2—No.	23,046	to No.	23,047, inclusive
Plant Patents	1—No.	809		
Patents	505—No.	2,452,029	to No.	2,452,533, inclusive
Designs	95—No.	151,483	to No.	151,577, inclusive
Total	991			

Patents expiring: Patent Numbers 1,828,727 to 1,829,723, inclusive, issued October 27, 1931, expire October 27, 1948

Condition of Applications Under Examination at Close of Business Oct. 8, 1948

Total number of patent applications awaiting action, 154,673. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewage.	5- 5-47	3- 7-47	2811
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	1-24-47	9-10-46	3002
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	1- 8-48	12-10-47	1381
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Disptach; Store Service; Mining, Quarrying, and Ice Harvesting.	3- 4-47	2- 8-47	4088
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	4- 3-47	9-20-46	1782
6. SURLE, H., Carbon Chemistry (part)	10-24-47	9- 9-47	1785
7. HANLIN, GEORGE, Optics; Photographic Apparatus	1- 8-48	9-26-47	1645
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	1-10-47	10- 2-46	4415
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	6-30-47	2- 5-47	2269
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	1-30-48	11-24-47	1635
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	3-27-47	11-10-47	796
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	10-22-47	9-12-46	2228
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	9-20-46	10- 9-46	2410
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	1- 2-48	10- 9-47	1361
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	7- 5-47	5-21-47	2124
16. LOVEWELL, N. N., Television; Telephony	1- 7-48	7-29-47	1489
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	3-18-47	10-16-46	2059
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	7-15-47	8- 2-46	2006
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	8- 4-47	2- 1-47	1875
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	4- 7-47	1- 8-47	2041
21. MADER, R. C., Textiles	11-10-47	8- 7-47	1248
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	3-14-47	1- 3-47	1714
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	10- 2-47	9-25-46	1197
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	9-25-47	9- 8-47	2772
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	11-25-47	2- 6-47	1751
26. YOUNG, R. R., Electricity—Generation and Motive Power	1-21-48	1-13-47	1239
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-11-47	12-28-46	3547
28. SOLYOM, H. L., Internal Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Railway Wheels and Axles.	10- 2-47	8- 7-47	984
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	3-27-47	2-26-47	3182
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	12- 6-47	9-30-47	1575
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	1-19-48	1-19-48	2176
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	3-31-47	11- 5-46	3226
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	1-23-47	10- 4-46	3558
34. SAPERSTEIN, S., Electricity—Transmission of Vehicles; Railways; Track Sanders; Signals and Indicators	3-12-47	10- 1-46	1496
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	6- 2-47	11-15-46	3339
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	11- 4-46	10- 3-46	1992
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	1-14-48	3- 4-47	1375
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	8- 7-47	5-31-47	1778
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	3-26-47	8-20-46	3025
40. DRUMMOND, E. J., Receptacles (part); Packages	11-24-47	11-21-46	3280
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	1- 8-48	10-11-46	2347
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	1- 5-48	1- 9-48	1211
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	12-19-47	11-29-47	1291
44. HARVEY, L. P., Refrigeration; Preserving	10- 5-46	9-27-46	1105
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing: Spring Devices; Animal Draft Appliances; Vehicle Fenders	3-16-47	10-11-46	2595
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	6-11-47	9-24-46	1844

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 154,673. Date of oldest new application, September 20, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	12- 6-47	6-14-47	2207
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	1- 3-48	3-21-47	1528
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	10-17-47	8-18-47	1558
50. LEVIN, SAMUEL, Synthetic Resins	12-31-47	9-19-47	2259
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	1-16-48	7-16-47	1794
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	10-13-47	1- 6-47	3864
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	5- 1-47	9- 4-46	3607
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	1-15-48	7-18-47	1715
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	10- 9-47	10- 8-47	1936
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	12-16-47	10-31-47	1064
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	4- 8-47	1- 4-47	3569
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	12-31-46	1-20-47	2146
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	8-25-47	4- 8-47	2024
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	1-31-48	7- 9-47	1410
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	11-29-46	6-17-46	3752
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	5-12-47	9-17-46	1900
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	9-30-47	8-30-47	1412
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	3-12-48	3-11-48	1564
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	1- 3-48	6-21-47	2146
66. LISANN, I., Geometrical Instruments	6- 5-47	4-16-46	2090
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	8- 1-47	4-30-47	1997
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	2-13-48	8- 1-47	1480
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	7- 1-47	10-18-47	1901
DESIGNS: BREHM, G. L	2-24-47	2-11-48	7706

Total number of trade-mark applications awaiting action (including renewals and republications), 39,845. Date of oldest new application, Sept. 19, 1947; date of oldest amended application, March 11, 1948.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Adco, Inc., Sedalia, Mo. Product for deodorizing and perfuming interior spaces. Serial No. 510,635, Oct. 26. Class 6.

Alexander Manufacturing Company, Forest City, N. C. Bed sheets, sheetings and pillow cases. Serial No. 554,642, Oct. 26. Class 42.

Altmann, Bernhard, New York, N. Y. Yarns. Serial No. 550,886, Oct. 26. Class 43.

Aluminum Goods Mfg. Co., Manitowoc, Wis. Toy tea and cooking sets. Serial No. 540,239, Oct. 26. Class 22.

Amb-A-Tip Cigar Company, Baltimore, Md. Cigars. Serial No. 511,438, Oct. 26. Class 17.

American Distilling & Manufacturing Co.: *See*—
Blankenbiller, Harold C.

American Electrical Corporation of Massachusetts, Boston, Mass. Electric alarm bell and control instruments and parts thereof. Serial No. 540,017, Oct. 26. Class 21.

American Map Company, Inc., New York, N. Y. Maps and atlases. Serial No. 536,982, Oct. 26. Class 38.

American Metalcraft Corporation, Detroit, Mich. Wheeled toy vehicles. Serial No. 508,404, Oct. 26. Class 22.

Armour and Company, Chicago, Ill. Fertilizer. Serial No. 528,414, Oct. 26. Class 10.

Arnold, S. M., Inc., St. Louis, Mo. Sponges. Serial No. 543,406, Oct. 26. Class 1.

Associated Merchandising Corporation, New York, N. Y. Sun lamps. Serial No. 541,492, Oct. 26. Class 21.

Atlantic Varnish and Paint Company, Incorporated, Richmond, Va. Ready mixed paints, paste paints, paint enamels, etc. Serial No. 526,733, Oct. 26. Class 16.

Averill, Floyd N., Jr., doing business as Santiseptic Company, Portland, Oreg. Mouth wash, and a lotion for the skin. Serial No. 548,561, Oct. 26. Class 6.

Avon Curtain Corporation, The, Fall River, Mass. Window curtains. Serial No. 516,465, Oct. 26. Class 42.

Ayer, Harriet Hubbard Inc., New York, N. Y. Face cream, face lotion, face powder, etc. Serial No. 542,268, Oct. 26. Class 6.

Ayling & Reichert Co., The, Toledo, Ohio. Chambered floats. Serial No. 564,497, Oct. 26. Class 13.

Balfour, Guthrie & Co., Limited, San Francisco, Calif. Firecrackers. Serial No. 547,307, Oct. 26. Class 9.

Ballinger, W. A., & Co., San Francisco, Calif. Cotton piece goods, sheets, pillow cases, etc. Serial No. 541,800, Oct. 26. Class 42.

Barbizon Corporation, New York, N. Y. Undergarments. Serial No. 537,280, Oct. 26. Class 39.

Bates & Co. (Huddersfield), Limited, Huddersfield, England. Yarns wholly or mainly of wool or worsted. Serial No. 552,530, Oct. 26. Class 43.

Bausch & Lomb Optical Company, Rochester, N. Y. Objective lenses. Serial No. 544,531, Oct. 26. Class 26.

Beeflet Sandwich Shop: *See*—
Spranzo, Richard.

Bennart Brush Corporation, Chicago, Ill. Hair brushes and tooth brushes. Serial No. 528,687, Oct. 26. Class 29.

Better Buy Wholesale Grocers, Fresno, Calif. Matches. Serial No. 522,186, Oct. 26. Class 9.

Blankenbiller, Harold C., doing business as American Distilling & Manufacturing Co., East Hampton, Conn. Witch hazel N. F. Serial No. 524,944, Oct. 26. Class 6.

Bloch Brothers Tobacco Co., The, Wheeling, W. Va. Chewing and smoking tobacco. Serial Nos. 539,632–3, Oct. 26. Class 17.

Bloch Brothers Tobacco Co., The, Wheeling, W. Va. Chewing and smoking tobacco. Serial No. 539,635, Oct. 26. Class 17.

Bostwick Laboratories, Inc., Bridgeport, Conn. Insecticides. Serial No. 548,786, Oct. 26. Class 6.

Bradford, James H. H., doing business as The Howe Company, Branford, Conn. Liquid cleaner for paint brushes. Serial No. 516,393, Oct. 26. Class 16.

Breslauer, A., Export Corp., New York, N. Y. Skin cream, hand cream, cleansing cream, etc. Serial No. 546,351, Oct. 26. Class 6.

Bubbles, Inc., assignor to Topps Chewing Gum, Incorporated, Brooklyn, N. Y. Bubble gum. Serial No. 531,091, Oct. 26. Class 46.

Bugge, Erling P., doing business as Machine-Research, Santa Monica, Calif. Protractors. Serial No. 544,321, Oct. 26. Class 26.

Bullet Recording & Transcription Co. Inc., Nashville, Tenn. Grooved phonograph records. Serial No. 512,235, Oct. 26. Class 36.

Burlington Mills Corporation, Greensboro, N. C. Twill trouser fabric of rayon and cotton. Serial No. 546,364, Oct. 26. Class 42.

Burlington Mills Corporation, Greensboro, N. C. Cotton gingham. Serial No. 546,366, Oct. 26. Class 42.

Burroughs Adding Machine Company, Detroit, Mich. Inking ribbons. Serial No. 527,469, Oct. 26. Class 11.

Butler, Edgar M., doing business as Butler Engineering Co., New Orleans, La. Self-energizing and/or power induced energizing electrolytic water correction devices. Serial No. 514,518, Oct. 26. Class 21.

Butler Engineering Co.: *See*—
Butler, Edgar M.

Calresin Corporation, Culver City, Calif. Transparent, air drying, impregnating plastic coating composition. Serial No. 517,958, Oct. 26. Class 16.

Canadian Radium & Uranium Corporation, New York, N. Y. Fertilizers. Serial No. 545,232, Oct. 26. Class 10.

Canton Stamping and Enameling Company, The, Canton, Ohio. Porcelain enamel coated base metal cooking, kitchen and household ware. Serial Nos. 533,532–3, Oct. 26. Class 13.

Cedar Hill Formulae Co., The, New Britain, Conn. Liquid composition for treating seed corn, beans, peas, etc. Serial No. 541,259, Oct. 26. Class 6.

Century Burial Vault Co., San Francisco, Calif. Burial vaults. Serial No. 514,250, Oct. 26. Class 2.

Champion Paper and Fibre Company, The, Hamilton, Ohio. Envelope paper. Serial No. 527,299, Oct. 26. Class 37.

Clifford-Jacobs Forging Company, Champaign, Ill. Ferrous metal castings and forgings. Serial No. 535,132, Oct. 26. Class 14.

Clover Farm Stores Corporation, Cleveland, Ohio. Clothes lines. Serial No. 552,945, Oct. 26. Class 7.

Colostom-Ease, Inc., Pittsburgh, Pa. Colostomy irrigators and colostomy protectors. Serial No. 540,388, Oct. 26. Class 44.

Columbia Products Corporation, Brooklyn, N. Y. Powder puffs. Serial No. 487,244, Oct. 26. Class 29.

Columbia Restaurant, The, Tampa, Fla. Steak capuchina or cooked beefsteak, cocoanut ice cream. Serial No. 469,034, Oct. 26. Class 46.

Conti Products Corporation, Brooklyn, N. Y. Soap. Serial No. 547,405, Oct. 26. Class 4.

Cook Specialty Company, Green Lane, Pa. Adjustable curved ruler. Serial No. 543,098, Oct. 26. Class 26.

Coro, Inc., New York, N. Y. Ornamental pins, jewelry clips, hair ornaments, etc. Serial No. 538,726, Oct. 26. Class 28.

Craftest Foods, Inc., Sand Springs, Okla. Peanut butter, fruit jellies, and fruit preserves. Serial No. 536,239, Oct. 26. Class 46.

Creamette Company, The, Minneapolis, Minn. Cigarettes. Serial No. 543,897, Oct. 26. Class 17.

Crompton Company, Crompton, R. I. Fabrics in the piece. Serial No. 543,132, Oct. 26. Class 42.

Crompton Company, Crompton, R. I. Fabrics in the piece. Serial No. 543,137, Oct. 26. Class 42.

Crompton Company, Crompton, R. I. Fabrics in the piece. Serial No. 543,139, Oct. 26. Class 42.

Crown Cork & Seal Company, Inc., Baltimore, Md. Artificial cork disks and bottle-closures. Serial No. 542,259, Oct. 26. Class 50.

Crown Cork & Seal Company, Inc., Baltimore, Md. Metallic cork-lined bottle stoppers. Serial No. 546,156, Oct. 26. Class 50.

Crownover, John M., Tulsa, Okla. Clasps or pins of precious metal. Serial No. 516,538, Oct. 26. Class 28.

Curley Company, Incorporated, Philadelphia, Pa. Toilet preparations. Serial No. 549,131, Oct. 26. Class 6.

Daggett & Ramsdell, assignor to Daggett & Ramsdell, Inc., New York, N. Y. Face powder; preparations for treating the skin; toilet, cleansing, vanishing, and cold cream, etc. Serial No. 548,719, Oct. 26. Class 6.

Daggett & Ramsdell, Inc., assignee: *See*—
Daggett & Ramsdell.

Daumit, Kay, Inc., assignor to Kathryn, Inc., Chicago, Ill. Cologne. Serial No. 506,739, Oct. 26. Class 6.

Dayton Company, The, Minneapolis, Minn. Table cloths, napkins, sheets, etc. Serial No. 542,100, Oct. 26. Class 42.

Doloney & Company, Inc., Chicago, Ill. Tonic for hair and scalp. Serial No. 513,300, Oct. 26. Class 6.

DeLong & Prevost; Inc., Worcester, Mass. Dental specialties. Serial No. 542,245, Oct. 26. Class 44.

Dif Corporation, Garwood, N. J. Hand cleaner, chemical abrasive compound, and liquid polish. Serial No. 529,370, Oct. 26. Class 4.

Diversey Corporation, The, Chicago, Ill. Disinfectant, bactericide and deodorizer in solid form. Serial No. 522,739, Oct. 26. Class 6.

Diversey Corporation, The, Chicago, Ill. Chemical preparation. Serial No. 542,014, Oct. 26. Class 4.

Dolan & Bullock Co., Providence, R. I. Jewelry, not including watches. Serial Nos. 528,703–4, Oct. 26. Class 28.

Dolan & Bullock Co., Providence, R. I. Jewelry, not including watches. Serial No. 528,707–8, Oct. 26. Class 28.

Dow Chemical Company, The, Midland, Mich. Package containing a galvanically active metal anode encased in an electrolytically conductive backfill composition. Serial No. 540,055, Oct. 26. Class 21.
Dox, Inc., New York, N. Y. Liniment. Serial No. 533,495, Oct. 26. Class 6.
Du Pont, E. I., de Nemours and Company, Wilmington, Del. Polymerized vinyl ester or esters. Serial No. 543,575, Oct. 26. Class 1.
Du Pont, E. I., de Nemours and Company, Wilmington, Del. Vinyl polymer. Serial No. 543,576, Oct. 26. Class 1.
Du Pont, E. I., de Nemours and Company, Wilmington, Del. Dyes. Serial No. 553,578, Oct. 26. Class 6.
Dusharme Products, Inc., Minneapolis, Minn. Hair dressings. Serial No. 550,130, Oct. 26. Class 6.

Preparation to be applied to canvas. H. B. F. Kuhls. 503,544, Oct. 26; Serial No. 514,899.

Preparation useful in the treatment of conditions of the vascular system. Sharp & Dohme, Incorporated. 503,514, Oct. 26; Serial No. 544,916, published July 13, 1948.

Preparations for making effervescent drinks. Floret Company. 247,302, renewed Sept. 25, 1948. O. G. Oct. 26.

Processing fluids. Neva-Wet Corporation of America, Inc. 336,434, July 7, 1936. Republished Oct. 26.

Remover, Nail polish. Glidden Company. 503,535, Oct. 26; Serial No. 549,145, published Aug. 3, 1948.

Repellent and conditioner, Water. Franklin Research Company. 503,337, Oct. 26; Serial No. 490,426, published Aug. 3, 1948.

Rinse for glassware, Germicidal. P. E. Bray. 503,346, Oct. 26; Serial No. 502,683, published July 27, 1948.

Sachet powders, bath salts and crystals, etc. Societe a Responsabilite Limitee: Laboratoires du "Sanopol." 441,149, Oct. 26; Serial No. 503,015, published Aug. 3, 1948.

Salve. G. N. Pappas. 249,972, renewed Nov. 27, 1948. O. G. Oct. 26.

Shampoo. M. Handman. 503,466, Oct. 26; Serial No. 537,178, published Aug. 3, 1948.

Skin cream, Greaseless, vanishing. Associated Products Company. 503,458, Oct. 26; Serial No. 536,217, published July 27, 1948.

Soda. Los Angeles Soap Company. 228,991, June 14, 1927. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 108,917, Mar. 7, 1916. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 111,509, July 18, 1916. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 116,549, May 8, 1917. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 118,571, Sept. 18, 1917. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 124,937, Mar. 25, 1919. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 127,479, Nov. 11, 1919. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 129,525, Feb. 24, 1920. Republished Oct. 26.

Sodium silicate. Philadelphia Quartz Company. 138,496, Dec. 28, 1920. Republished Oct. 26.

Softener, Water. Los Angeles Soap Company. 290,216, Dec. 22, 1931. Republished Oct. 26.

Solution for use in cooling towers, refrigerating systems, humidifying systems, etc. G. S. McCarty. 503,437, Oct. 26; Serial No. 534,042, published July 27, 1948.

Solution of sodium phosphate, Concentrated. C. B. Fleet Co. Inc. 315,096–7, July 17, 1934. Republished Oct. 26.

Solvents. Ditto, Incorporated. 362,665, Nov. 29, 1938. Republished Oct. 26.

Starch, Gloss. Morey Mercantile Company. 503,496, Oct. 26; Serial No. 542,043, published July 27, 1948.

Starch, Laundry. American Products Company. 441,137, Oct. 26; Serial No. 467,508, published Dec. 24, 1946.

Surgical dressing in semi-gelatinous forms, Analgesic antiseptic, non-irritating. F. M. Hull. 387,348, May 13, 1941. Republished Oct. 26.

Tablets, Chocolate coated compressed. Harrower Laboratory, Inc. 390,884, Oct. 7, 1941. Republished Oct. 26.

Tablets, Cold and grippe. McKesson & Robbins, Incorporated. 245,488, renewed Aug. 14, 1948. O. G. Oct. 26.

Toilet preparations. R. Lacoste. 441,140, Oct. 26; Serial No. 490,316, published May 25, 1948.

Tonic and worming preparation. L. & S. Hog Tonic Co. 375,602, Feb. 20, 1940. Republished Oct. 26.

Tooth paste. McKesson & Robbins, Incorporated. 245,572–3, renewed Aug. 14, 1948. O. G. Oct. 26.

Vitamin preparations. Sharp & Dohme, Incorporated. 503,515–16, Oct. 26; Serial Nos. 544,917–18, published July 13, 1948.

Vitamin tablets. A. R. Beamon. 503,521, Oct. 26; Serial No. 546,818, published Aug. 3, 1948.

CLASS 7

Cords and twines, Braided and twisted. Samson Cordage Works. 247,579, renewed Oct. 2, 1948. O. G. Oct. 26.

CLASS 8

Ash trays of glass. Defiance Sales Corporation. 503,456, Oct. 26; Serial No. 535,834, published Aug. 3, 1948.

Pipes, tobacco pouches, cigarette papers cut to size, Smokers', etc. J. H. Moore, Inc. 503,357, Oct. 26; Serial No. 512,078, published Aug. 3, 1948.

Pouches, Tobacco. National Carbon Company, Inc. 441,188, Oct. 26; Serial No. 525,369, published July 27, 1948.

CLASS 9

Black powder, both potassium nitrate and sodium nitrate base, etc. King Powder Company. 503,416, Oct. 26; Serial No. 532,033, published Aug. 3, 1948.

Blasting high explosives. King Powder Company. 503,415, Oct. 26; Serial No. 532,032, published July 13, 1948.

Fireworks and toy pistol caps. J. Halpern Company. 503,502, Oct. 26; Serial No. 542,568, published Aug. 3, 1948.

Revolvers. M. E. Johnson. 68,389, Apr. 7, 1908. Republished Oct. 26.

Rolls of paper caps. G. Backes Fireworks Company. 503,470, Oct. 26; Serial No. 537,653, published July 27, 1948.

Sparklers. J. Halpern Company. 503,501, Oct. 26; Serial No. 542,566, published Aug. 3, 1948.

Shotguns. M. E. Johnson. 68,386, Apr. 7, 1908. Republished Oct. 26.

CLASS 10

Bark of trees, Comminuted. Weyerhaeuser Timber Company. 503,448, Oct. 26; Serial No. 535,287, published July 13, 1948.

Fertilizers. California Spray-Chemical Corporation. 503,453, Oct. 26; Serial No. 535,381, published July 27, 1948.

Fertilizers. California Spray-Chemical Corporation. 503,454, Oct. 26; Serial No. 535,382, published July 20, 1948.

Fertilizers. Fertil-Cel Gardens. 441,158, Oct. 26; Serial No. 506,490, published July 13, 1948.

Fertilizers. International Minerals and Chemical Corporation. 503,401, Oct. 26; Serial No. 530,405, published July 27, 1948.

Fertilizers. I. P. Thomas & Son Company. 503,434, Oct. 26; Serial No. 533,644, published July 13, 1948.

Fertilizers and plant food. Tennessee Copper & Chemical Corporation. 238,331, Feb. 7, 1928. Republished Oct. 26.

Peat moss, Soil-conditioning. Bord Na Mona. 503,473, Oct. 26; Serial No. 538,025, published July 13, 1948.

CLASS 11

Ink, Printing. Sun Chemical Corporation. 503,524–6, Oct. 26; Serial Nos. 547,166–8, published Aug. 3, 1948.

Ink, Printing. Sun Chemical Corporation. 503,527–8, Oct. 26; Serial Nos. 547,170–1, published Aug. 3, 1948.

Ink, Printing. Sun Chemical Corporation. 503,529, Oct. 26; Serial No. 547,178, published Aug. 3, 1948.

Ink, Writing, and writing fluid. Guild Products Corporation. 169,228, June 12, 1923. Republished Oct. 26.

Inks, Printing, and inking rollers, etc. International Printing Pressman and Assistants' Union of North America. 398,015, Oct. 6, 1942. Republished Oct. 26.

Inks, Printing, lithographing inks; and pigments, etc. Sherwin-Williams Company. 441,186, Oct. 26; Serial No. 524,731, published July 27, 1948.

Typewriter ribbon and carbon paper. Underwood Corporation. 503,342, Oct. 26; Serial No. 497,513, published July 27, 1948.

Typewriter ribbons and carbon paper. Codo Manufacturing Corporation. 372,852, Nov. 14, 1939. Republished Oct. 26.

CLASS 12

Ash dumps, ash-pits; and chimney flue doors, etc. Donley Brothers Company. 169,590, June 26, 1923. Republished Oct. 26.

Asphalt and magnesite materials, Emulsified. Selby, Battersby and Company. 283,153, May 19, 1931. Republished Oct. 26.

Beads for walls, window openings and doorways, Corner. Bostwick Steel Lath Company. 503,443, Oct. 26; Serial No. 534,740, published June 29, 1948.

Brick. Hydraulic-Press Brick Company. 329,017, Oct. 15, 1935. Republished Oct. 26.

Brick. Pacific Clay Products. 240,671, Apr. 3, 1928. Republished Oct. 26.

Brick, Pressed, glazed and enameled brick, ruffled brick, etc. Pacific Clay Products Co. 167,519, May 1, 1923. Republished Oct. 26.

Buildings, Manufactured frame construction. L. E. Legg. 503,358, Oct. 26; Serial No. 513,827, published June 29, 1948.

Cement. Carney Cement Company. 159,677, Oct. 3, 1922. Republished Oct. 26.

Felt, Thermal and sound insulating and fireproofing. Wilson Grant Incorporated. 353,122, Dec. 28, 1937. Republished Oct. 26.

Fibre board, Insulating board, composite board, etc. Masonite Corporation. 248,040, renewed Oct. 16, 1948. O. G. Oct. 26.

Floor plate, Non-slip rolled steel. Inland Steel Company. 503,341, Oct. 26; Serial No. 497,182, published July 13, 1948.

Flooring, Composition. Marine Decking & Supply Co. 218,502, Sept. 28, 1926. Republished Oct. 26.

Lath and expanded metal reenforcements, Metal. Bostwick Steel Lath Company. 503,441, Oct. 26; Serial No. 534,737, published July 6, 1948.

Lath, Expanded metal, expanded metal reenforcements, etc. Bostwick Steel Lath Company. 503,442, Oct. 26; Serial No. 534,738, published June 29, 1948.

Material used in building roads. M. T. Calef. 107,960, Jan. 4, 1916. Republished Oct. 26.

Materials for plastic and mastic floor coverings. Selby, Battersby and Company. 275,251–2, Sept. 16, 1930. Republished Oct. 26.

Putty, Brine. Mundet Cork Corporation. 441,176, Oct. 26; Serial No. 521,597, published June 29, 1948.

Sewer pipe, Vitrified salt glazed, tile water pipe, etc. Pacific Clay Products Co. 167,520, May 1, 1923. Republished Oct. 26.

Wall and surface covering, Decorative. Muller & Barringer. 441,166, Oct. 26; Serial No. 511,349, published July 13, 1948.

CLASS 13

Fixture for holding garden and household tools, Metal. J. L. Brown. 432,089, Aug. 19, 1947. Republished Oct. 26.

Pie pans and cake pans, Base-metal. Edward Katzinger Company. 245,277, renewed Aug. 7, 1948. O. G. Oct. 26.

Pipe fittings, valves, cocks, relief valves, etc., Metal. Cleveland Heater Company. 244,817, July 31, 1928. Republished Oct. 26.

Pipes, Cast iron. Florence Pipe Foundry & Machine Company. 223,784, Feb. 8, 1927. Republished Oct. 26.

Traps, Drain-pipe, sewer-pipe strainers, slop sinks, etc. Donley Brothers Company. 177,408, Dec. 18, 1923. Republished Oct. 26.

Valves, cocks, faucets. Haydenville Company. 64,784, Aug. 20, 1907. Republished Oct. 26.

CLASS 14

Alloys, Metal. M. Kurzer. 374,942, Jan. 30, 1940. Republished Oct. 26.

Alloys, Metallic welding, brazing, and soldering. R. D. Wasserman. 413,659, May 8, 1945. Republished Oct. 26.

Bars, Wire, bars, ingot bars, etc. United States Metals Refining Company. 215,548, July 20, 1926. Republished Oct. 26.

Castings, Non-ferrous. Permacel Aluminum & Bronze Corporation. 503,361, Oct. 26; Serial No. 514,839, published July 13, 1948.

Die forgings. Billings & Spencer Company. 45,068, Aug. 8, 1905. Republished Oct. 26.

Ferro-alloys. Ohio Ferro-Alloys Corporation. 327,777, Sept. 3, 1935. Republished Oct. 26.

Ferro-Alloys. Ohio Ferro-Alloys Corporation. 403,413, Sept. 21, 1943. Republished Oct. 26.

Forgings. Milwaukee Forge & Machine Co. 503,400, Oct. 26; Serial No. 530,328, published July 13, 1948.

Forgings, Die. Billings & Spencer Company. 45,068, Aug. 8, 1905. Republished Oct. 26.

Lead, tin, and antimony products. Division Lead Co. 441,161, Oct. 26; Serial No. 507,808, published July 20, 1948.

Metals, Ferrous, and ferrous metal castings and forgings. American Rolling Mill Company. 503,390, Oct. 26; Serial No. 527,741, published July 13, 1948.

Sheet metal. Jones & Laughlin Steel Corporation. 503,392, Oct. 26; Serial No. 528,482, published July 13, 1948.

Steel, Tool. Vanadium-Alloys Steel Company. 503,339, Oct. 26; Serial No. 495,528, published July 13, 1948.

Steels. Cyclops Steel Company, Inc. 246,002, renewed Aug. 28, 1948. O. G. Oct. 26.

Thermostatic metal. Metals & Controls Corporation. 500,964, corrected July 13, 1948. O. G. Oct. 26.

CLASS 15

Gasoline. Wilshire Oil Company, Inc. 384,487, Jan. 21, 1941. Republished Oct. 26.

Gasoline, engine distillate, furnace distillate, etc. Wilshire Oil Company, Inc. 164,498, Feb. 20, 1923. Republished Oct. 26.

Gasoline, kerosene, distillate, etc. Wilshire Oil Company, Inc. 290,070, Dec. 22, 1931. Republished Oct. 26.

Greases and lubricating oils, Lubricating. New York Lubricating Oil Company. 72,380, re-renewed Jan. 19, 1949. O. G. Oct. 26.

Oils, Lubricating, motor-fuel, and furnace, etc. Hartol Products Corporation. 247,239, renewed Sept. 25, 1948. O. G. Oct. 26.

Petroleum products. Wilshire Oil Company, Inc. 194,001, Jan. 13, 1925. Republished Oct. 26.

CLASS 16

Cleaning and polishing compounds. J. P. Merz. 242,093, renewed May 15, 1948. O. G. Oct. 26.

Coating compositions. Atlas Powder Company. 420,588, Apr. 23, 1946. Republished Oct. 26.

Coating compositions. Maas & Waldstein Co. 422,318, July 16, 1946. Republished Oct. 26.

Enamels. Maas & Waldstein Co. 422,319, July 16, 1946. Republished Oct. 26.

Enamels, Synthetic baking. Maas & Waldstein Co. 420,636, Apr. 23, 1946. Republished Oct. 26.

Lacquers and lacquer enamels. Waukegan Chemical Company. 196,874, Mar. 31, 1925. Republished Oct. 26.

Lacquers and lacquer enamels, Clear. Maas & Waldstein Co. 420,637, Apr. 23, 1946. Republished Oct. 26.

Lacquers and paint enamels. Maas & Waldstein Co. 421,701–2, June 11, 1946. Republished Oct. 26.

Lacquers, Crystallizing. Maas & Waldstein Co. 421,780, June 18, 1946. Republished Oct. 26.

Paint. C. A. Woolsey Paint & Color Company. 69,989, re-renewed July 21, 1948. O. G. Oct. 26.

Paint enamel. Great Lakes Varnish Works, Inc. 310,786, Mar. 6, 1934. Republished Oct. 26.

Paint enamel. Great Lakes Varnish Works, Inc. 390,010, Sept. 2, 1941. Republished Oct. 26.

Paint enamel. Hanna Paint Mfg. Co. 221,230, Nov. 23, 1926. Republished Oct. 26.

Paint enamels and varnishes. Great Lakes Varnish Works, Inc. 247,879, renewed Oct. 9, 1948. O. G. Oct. 26.

Paint, Flat wall. Great Lakes Varnish Works, Inc. 283,040, May 12, 1931. Republished Oct. 26.

Paint, Liquid. Hanna Paint Mfg. Co. 78,513, June 21, 1910. Republished Oct. 26.

Paint, Plastic. Finishing Specialties & Service Co. 246,015, renewed Aug. 28, 1948. O. G. Oct. 26.

Paint, Ready-mixed. Great Lakes Varnish Works, Inc. 425,243, Nov. 12, 1946. Republished Oct. 26.

Paints and enamels, Ready-mixed, paint colors, varnishes, etc. Celluloid Zapon Company. 197,335, Apr. 14, 1925. Republished Oct. 26.

Paints and paint enamels, Ready-mixed. Wilbur & Williams Company. 409,581, Oct. 10, 1944. Republished Oct. 26.

Paints and paint enamels, Ready-mixed. Wilbur & Williams Company. 409,721, Oct. 17, 1944. Republished Oct. 26.

Paints in paste or semi-paste form. Seidlitz Paint & Varnish Co. 503,564, Oct. 26; Serial No. 536,148.

Paints, lacquers, and paint enamels. Maas & Waldstein Co. 421,704, June 11, 1946. Republished Oct. 26.

Paints, Mixed, dry paints, paint-colors, etc. Clinton Metallic Paint Company. 106,217, Oct. 19, 1915. Republished Oct. 26.

Paints, Ready-mixed. Great Lakes Varnish Works, Inc. 227,758, May 17, 1927. Republished Oct. 26.

Paints, Ready-mixed. Hanna Paint Mfg. Co. 221,233, Nov. 23, 1926. Republished Oct. 26.

Paints, Ready-mixed, rust inhibiting paints, paste paints, etc. Wilbur & Williams Company. 420,602, Apr. 23, 1946. Republished Oct. 26.

Paints, Ready mixed wall finish. Hanna Paint Mfg. Co. 224,702, Mar. 1, 1927. Republished Oct. 26.

Paints, varnish, and paint enamels, Ready-mixed. Great Lakes Varnish Works, Inc. 416,333, Sept. 4, 1945. Republished Oct. 26.

Polish, Furniture. L. Goodman. 331,820, Jan. 21, 1936. Republished Oct. 26.

Primer and sealer, Pigmented. Great Lakes Varnish Works, Inc. 409,252, Sept. 26, 1944. Republished Oct. 26.

Primer, Plastic resin base. Maas & Waldstein Co. 420,878, May 7, 1946. Republished Oct. 26.

Varnish. Great Lakes Varnish Works, Inc. 298,060, Oct. 11, 1932. Republished Oct. 26.

Varnishes and enamels, Synthetic resin. Maas & Waldstein Co. 420,879, May 7, 1946. Republished Oct. 26.

Wax compound, Floor polishing. Candy & Company, Inc. 385,863, Mar. 18, 1941. Canceled Oct. 1, 1948. O. G. Oct. 26.

CLASS 17

Cigars. Metropolitan Cigar Corporation. 332,165, Feb. 4, 1936. Republished Oct. 26.

CLASS 19

Automobile accessories. Motor Products Corporation. 218,521, Sept. 28, 1926. Republished Oct. 26.

Heaters, Automobile. A. A. Wilson. 246,121, renewed Sept. 4, 1948. O. G. Oct. 26.

Ventilating apparatus, Vehicle window. Motor Products Corporation. 317,269, Sept. 18, 1934. Republished Oct. 26.
Wheels, Vehicle. Differential Wheel Corporation. 388,826, July 15, 1941. Republished Oct. 26.

CLASS 21

Atomizer, Electrically heated. Tanglefoot Company. 428,532, Mar. 25, 1947. Republished Oct. 26.
Automobile accessories. Jambor Tool & Stamping Co. 234,113, Oct. 18, 1927. Republished Oct. 26.
Control switches, Electrical. Fairfield Engineering Company. 390,979, Oct. 14, 1941. Republished Oct. 26.
Fabrics and tapes, Varnished cambric, and varnished papers. New Jersey Wood Finishing Company. 281,286, Mar. 17, 1931. Republished Oct. 26.
Fuses, Thermal time delay. Jefferson Electric Company. 503,542, Oct. 26; Serial No. 509,706.
Lanterns, Electric. Delta Electric Company. 269,435, Apr. 8, 1930. Republished Oct. 26.
Motors, Electric, and electric bench grinders. Delta Manufacturing Company. 322,510, Mar. 12, 1935. Republished Oct. 26.
Rheostats, Electric, electric illumination control apparatus. Ward Leonard Electric Company. 433,014, Sept. 23, 1947. Republished Oct. 26.
Scissors, Electric. Atlas Instrument Company. 441,189, Oct. 26; Serial No. 495,160.
Stoves, Electric cooking. International Appliance Corporation. 365,023, Feb. 21, 1939. Republished Oct. 26.

CLASS 22

Billiard balls, Pocket. Brunswick-Balke-Collender Company. 281,138, Mar. 10, 1931. Republished Oct. 26.
Toy drawing outfits. H. B. Jones. 304,248, June 27, 1933. Republished Oct. 26.

CLASS 23

Automobile accessories. Motor Products Corporation. 218,521, Sept. 28, 1926. Republished Oct. 26.
Books, Blank, loose leaf ledger binders, loose leaf sheets, etc. Guild Products Corporation. 159,364, Sept. 26 1922. Republished Oct. 26.
Chasers and chaser-holders. Geometric Tool Company. 313,739, June 5, 1934. Republished Oct. 26.
Chasers and chaser-holders. Geometric Tool Company. 313,942, June 12, 1934. Republished Oct. 26.
Engines, Internal-combustion. Wright Aeronautical Corporation. 245,676, renewed Aug. 21, 1948. O. G. Oct. 26.
Lawnmowers, lawn sprayers, spray guns, etc. Arkwright, Incorporated. 430,114, June 10, 1947. Republished Oct. 26.
Loom sundries, Leather. Charles Bond Company. 173,733, Oct. 2, 1923. Republished Oct. 26.
Motor units for portable power operated tools, Manually supported. Buckeye Portable Tool Co. 395,087, May 12, 1942. Republished Oct. 26.
Presses and parts therefor, Metal working. Clearing Machine Corporation. 375,878, Mar. 5, 1940. Republished Oct. 26.
Pumps and condensers, etc., Steam-driven. National Transit Pump & Machine Company. 130,843, May 4, 1920. Republished Oct. 26.
Screw wrenches, Adjustable. Coes Wrench Company. 46,548, Sept. 26, 1905. Republished Oct. 26.
Soldering irons, Electric, and electric branding irons. A. L. Johnson. 386,555, Apr. 15, 1941. Republished Oct. 26.
Stocking-knitting machinery, Automatic. Hemphill Manufacturing Company. 81,272, Mar. 21, 1911. Republished Oct. 26.
Tire-vulcanizing machine. Akron Tyrwelder Company. 248,298, renewed Oct. 16, 1948. O. G. Oct. 26.
Tools, blanks and finished tools. Billings & Spencer Company. 130,638, May 4, 1920. Republished Oct. 26.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,543, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,544, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,545, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar artfcle. 151,546, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,547, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,548, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Pin clip or similar article. 151,549, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar article. 151,550, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,551, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,552, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,553, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,554, Oct. 26.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,555, Oct. 26.
Quackenbush, Andrew, Clifton, N. J. Savings bank. 151,556, Oct. 26.
Railley Corporation, assignee: *See*—
Bookman, Charles F., Jr., and Jammé.
Raine, Russell W., and G. T. Derby, Jacksonville, Fla. Ash tray. 151,557, Oct. 26.
Russi, Lewis W., Denver, Colo. Smoking pipe attachment. 151,558, Oct. 26.
Sachs, Herbert W., Washington, D. C. Building. 151,559, Oct. 26.
Scott, Dorris M., and E. Steinberg, assignors to Anita-Gay Creations, Inc., Los Angeles, Calif. Belt. 151,560, Oct. 26.
Sears, Roebuck and Co., assignee: *See*—
Bjorncrantz, Carl B.
Sommerville, Andrew, Pasadena, Calif. Lamp. 151,561, Oct. 26.
Southwell, Ernest E., Vallejo, assignor of one-half to C. Klotz, Santa Rosa, Calif. Dice game device. 151,562, Oct. 26.
Steinberg, Evelyn: *See*—
Scott, Dorris M., and Steinberg.
Strassner, John F., New York, N. Y. Dress. 151,563, Oct. 26.
Strassner, John F., New York, N. Y. Dress ensemble. 151,564, Oct. 26.
Strassner, John F., New York, N. Y. Dress. 151,565, Oct. 26.
Strassner, John F., New York, N. Y. Dress. 151,566, Oct. 26.
Strassner, John F., New York, N. Y. Dress ensemble. 151,567, Oct. 26.
Strassner, John F., New York, N. Y. Dress. 151,568, Oct. 26.
Sutton, John H., Los Angeles, Calif. Match book holder. 151,569, Oct. 26.
Taylor, Robert F., Hounslow, assignor to G. B. Kent & Sons, Limited, London, England. Palate plate brush. 151,570, Oct. 26.
Tillinghast, George H., Burlington, N. J. Dummy plug for electric outlets. 151,571, Oct. 26.
Tomarin, Harry A., Cincinnati, Ohio. Tie rack or similar article. 151,572, Oct. 26.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Warren Featherbone Co., The, assignee: *See*—
Kraft, Marie J.
Weckstein, Joseph, New York, N. Y. Fur coat. 151,573, Oct. 26.
Westinghouse Electric Corporation, assignee: *See*—
Winkler, Frederic C., and Wyman.
Williams, John F., Hingham, Mass. Door knocker. 151,574, Oct. 26.
Winkler, Frederic C., and B. A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation. Luminaire. 151,575, Oct. 26.
Winkler, Frederic C., and B. A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation. Luminaire. 151,576, Oct. 26.
Winkler, Frederic C., and B. A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation. Luminaire. 151,577, Oct. 26.
Wormeck, Herbert A.: *See*—
Hess, Frederick P., and Wormeck.
Wyman, Burton A., et al.: *See*—
Winkler, Frederic C., and Wyman.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 26TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ackerman, James E., Devon, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Strip reversing binder for sewing machines. 2,452,419, Oct. 26.
Adams, Edward W.: *See*—
Cady, George H., and Adams.
Addorisio, Patsy, Portchester, N. Y. Vehicle speed indicating device. 2,452,344, Oct. 26.
Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Ault, Waldo C., and Schaeffer.
Balch, Royal T.
Rehberg, Chessie E., and Fisher.
Air-Flo Compressor Company, The, assignee: *See*—
Fischer, William V.
Air Reduction Company, Incorporated, assignee: *See*—
Helmkamp, Richard F.
Ajax Electrothermic Corporation, assignee: *See*—
Kennedy, Theodore R.
Albi Manufacturing Company, Incorporated, assignee: *See*—
Jones, Grinnell J., and Soll.
Alco Valve Company, assignee: *See*—
Dube, John E.
Allan, John, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Phenol-aldehyde molding compositions. 2,452,420, Oct. 26.
Allen, Juanita H.: *See*—
Allen, La Bron R. and J. H., and Kabitsch.
Allen, La Bron R. and J. H., and R. L. Kabitsch, assignors to Signet, Ltd., Cincinnati, Ohio. Tab reminder device. 2,452,217, Oct. 26.
Allied Chemical & Dye Corporation, assignee: *See*—
Flett, Lawrence H.
Gunaer, Percy W.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Dahlstrand, Hans P.
Allnutt, Ralph B., Glen Echo Heights, Md., and R. T. McGoldrick, Brooklyn, N. Y. Torsional oscillation generator. 2,452,031, Oct. 26.
Alty, Harold J.: *See*—
Partridge, William A., and Alty.
American Blower Corporation, assignee: *See*—
Walters, Thomas A.
American Can Company, assignee: *See*—
Saubestre, Basil F.
American Enka Corporation, assignee: *See*—
Kayser, Guillaume M. A.
American-Maize Products Company, assignee: *See*—
Morgan, Willard L.
Morgan, Willard L., and Faelten.
Ames, Charles F., New York, N. Y. Vacuum return pumping unit. 2,452,421, Oct. 26.
Anderson, Homer G., Waban, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device of the magnetron type. 2,452,032, Oct. 26.
Anglo-Iranian Oil Company Limited, assignee: *See*—
Partridge, William A., and Alty.
Anselmo, Ceyl, Atlantic City, N. J. Brassière. 2,452,345, Oct. 26.
Appleman, Joseph F., Chicago, Ill. Garment hanger. 2,452,346, Oct. 26.
Armstrong, James, & Company, assignee: *See*—
Feasey, Charles E.
Arnold, Frank B., New York, N. Y. Packaging. 2,452,174, Oct. 26.
Arnold, Ralph J.: *See*—
Crehan, William J., and Arnold.
Arnold, Ralph J., Western Springs, Ill., and W. D. MacDonald, Santa Monica, and R. D. Collins, Beverly Hills, Calif., assignors, by mesne assignments, of one-half to Kellogg Switchboard and Supply Company, Chicago, Ill., and one-half to R. D. Collins, Beverly Hills, Calif. Apparatus for producing elastic coils with connecting tails. 2,452,435, Oct. 26.
Art Metal Construction Company, assignee: *See*—
Wells, Roy E.
Aschner, Thomas C.: *See*—
Bitler, William P., Aschner, and Nicholl.
Athy, Lawrence F., assignor to Continental Oil Company, Ponca City, Okla. Making geophysical explorations. 2,452,515, Oct. 26.
Atkins, Samuel L., New York, N. Y. Line securing device. 2,452,175, Oct. 26.
Atlas Consolidated Corporation: *See*—
Turkat, Meyer.
Attorney General of the United States, vested in: *See*—
Muller, Jacques.

Atwood Vacuum Machine Company, The: *See*—
Johnson, George H.
Auer, William F., Menasha, Wis. Ventilated toilet. 2,452,282, Oct. 26.
Ault, Waldo C., Philadelphia, and B. B. Schaeffer, Upper Darby, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Rubber-like product and preparation. 2,452,092, Oct. 26.
Auto Specialties Manufacturing Company, assignee: *See*—
Mueller, Joseph J.
Baker Manufacturing Company, The: *See*—
Washbond, Harry H.
Balch, Royal T., Houma, La., assignor to the United States of America as represented by the Secretary of Agriculture. Purification of hard waxes by removal of soft fatty components. 2,452,093, Oct. 26.
Ball, Thomas M., Detroit, assignor to Chrysler Corporation Highland Park, Mich. Valve catcher. 2,452,283, Oct. 26.
Barton, William N.: *See*—
Eslinger, Wallace V., and Barton.
Bascom, Roger C., Port Clinton, Ohio, assignor to Rubatex Products, Inc., New York, N. Y. Vulcanization. 2,452,347, Oct. 26.
Basham, Cecil L., Athens, Ga. Electrical connector. 2,452,422, Oct. 26.
Bass, Arthur P., Newark, N. J. Tool for removing wire insulation. 2,452,423, Oct. 26.
Beach, Walter A., assignor to Cardox Corporation, Chicago, Ill. Fire extinguishing method. 2,452,348, Oct. 26.
Beare, Charles H., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Injection of brake linings. 2,452,284, Oct. 26.
Beatty, Lowell C., assignor to Beatty Machine & Manufacturing Company, Hammond, Ind. Spacing table. 2,452,285, Oct. 26.
Beatty Machine & Manufacturing Company, assignee: *See*—
Beatty, Lowell C.
Becker, Howard I., Schenectady, N. Y., assignor to General Electric Company. Directive radio antenna. 2,452,349, Oct. 26.
Beeman, Donald R.: *See*—
Liber, Harry, and Beeman.
Bell, Morris, assignor to Seeman Bros., Inc., New York, N. Y. Wick holder for evaporators. 2,452,424, Oct. 26.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Farkas, Francis S.
Hersey, Ralph E.
Hibbard, Frank H.
Sears, Raymond W.
Stacy, Leland J.
Bemis, Ken E., Oakland, Calif. Hamburger apportioning, forming, and wrapping machine. 2,452,218, Oct. 26.
Bendix Aviation Corporation, assignee: *See*—
Hauck, Vernon D.
Wood, Louvan E.
Benjamin, Allen, Chicago, Ill. Spring band. 2,452,286, Oct. 26.
Bent, Arthur J., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure controlled actuator. 2,452,176, Oct. 26.
Bergman, Gote E., New York, N. Y. Razor blade sharpener. 2,452,094, Oct. 26.
Bergvall, Knut L., and E. E. Dahlberg, Stockholm, Sweden. Device for the joining of tubes. 2,452,219, Oct. 26.
Berkholder, George H., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Switch. 2,452,425, Oct. 26.
Berkman, Herbert A., Chicago, Ill., assignor to Zim Manufacturing Company. Cylinder ridge reamer. 2,452,095, Oct. 26.
Bertalotto, Marion F., Monett, Mo. Combined billfold and card retainer. 2,452,096, Oct. 26.
Bethlehem Steel Company, assignee: *See*—
Wilson, Tom.
Bezzerides, Paul A., Orosi, Calif. Hot cap setting machine. 2,452,287, Oct. 26.
Bilofsky, Maxwell M., assignee: *See*—
Warsher, Adolph.
Bitler, William P., Haverstraw, T. C. Aschner, Stony Point, and L. Nicholl, Nyack, assignors to Kay-Fries Chemicals, Inc., West Haverstraw, N. Y. Preparing alkyl esters of chloroacetic acid. 2,452,350, Oct. 26.
Blando, Thomas R., Utica, N. Y. Bowling score indicator. 2,452,288, Oct. 26.
Blaske, Edward C., Wellsville, N. Y. Holder for sheet material. 2,452,426, Oct. 26.

Bletcher, James H., assignee et al.: *See*—
Bucknell, Ernest H., and Bletcher.
Bletcher, Pearl W., assignee et al.: *See*—
Bucknell, Ernest H., and Bletcher.
Bletcher, Ralph E.: *See*—
Bucknell, Ernest H., and Bletcher.
Bloxom, Harvey L., and E. M. Shideler, Council Bluffs, Iowa. Multiple holder of quartz oscillator plates. 2,452,351, Oct. 26.
Bodimer, Gilbert E., Indianapolis, Ind. Mop holder with dual tape tensioning structure. 2,452,177, Oct. 26.
Boeing Airplane Company, assignee: *See*—
Stoner, George H.
Bokum, William F., Jenkintown, assignor to Proctor & Schwartz, Inc., Philadelphia, Pa. Condenser. 2,452,427, Oct. 26.
Booth, James H., Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio. Self-aligning bearing. 2,452,352, Oct. 26.
Borg-Warner Corporation: *See*—
Candler, James N.
Born, Frank G., Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill. Tractor trailer brake control. 2,452,033, Oct. 26.
Bornside, Harry B., Providence, R. I. Household incinerator. 2,452,097, Oct. 26.
Bower, William L., Sheffield, England. Magnetic separator. 2,452,220, Oct. 26.
Brick, Perry A., assignor to The Perfection Steel Body Company, Galion, Ohio. Body tipping apparatus for motor vehicles. 2,452,516, Oct. 26.
British Ropes Limited, assignee: *See*—
Hitchen, Herbert.
Brock, Arnold E., Burlingame, assignor to Pacific Electric Manufacturing Corporation, San Francisco, Calif. Fluid blast arc extinguishing circuit breaker. 2,452,221, Oct. 26.
Brooks, Elinor, Califon, N. J. Securing identification tags to seals. 2,452,098, Oct. 26.
Broughton, Harold E., assignor to Chemical Construction Corporation, New York, N. Y. Waste iron sulfate solution recovery. 2,452,517, Oct. 26.
Brownlee, Dalmar T., assignor to Chas. Drexler Co., Inc., Indianapolis, Ind. Power transmission system. 2,452,178, Oct. 26.
Brownson, George T., Philadelphia, assignor to J. J. Duffy, Yeadon, Pa. Burial dress support. 2,452,353, Oct. 26.
Bruce, Ivy, assignee: *See*—
Roberts, James H.
Brumhill, Claude W., assignor to The Imperial Typewriter Company Limited, Leicester, England. Producing reduplicative master sheets in typewriting and like machines. 2,452,099, Oct. 26.
Bruson, Herman A., Rydal, and W. D. Niederhauser, assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa. Addition products from acrylic esters. 2,452,029, Oct. 26.
Bryant, Corwin W., Downers Grove, assignor to Crane Co., Chicago, Ill. Flexible valve stem drive. 2,452,428, Oct. 26.
Bryson, Newall M., assignor to Pallet Engineering Company, San Francisco, Calif. Bridge ramp. 2,452,222, Oct. 26.
Bryson, Newall M., assignor to Pallet Engineering Company, San Francisco, Calif. Bridge ramp. 2,452,289, Oct. 26.
Bucknell, Ernest H., and R. E. Bletcher, assignors of ten percent to R. E. Bletcher, twelve and one-half percent to E. H. Bucknell, twelve and one-half percent to M. Bucknell, ten percent to P. W. Bletcher, twenty-five percent to M. B. Liston, ten percent to J. H. Bletcher, ten percent to H. B. Skinner, and ten percent to C. R. B. Robinson, Los Angeles, Calif. Faucet valve element. 2,452,354, Oct. 26.
Bucknell, Mabel, assignee et al.: *See*—
Bucknell, Ernest H., and Bletcher.
Buffalo Electro-Chemical Company, Inc., assignee: *See*—
Shanley, Edward S., and Kauffmann.
Bunting, Albert L., Dearborn, Mich. Chemical conversion of salt containing solutions. 2,452,179, Oct. 26.
Burkert, Daniel G., Boyertown, Pa. Combined ash receptacle and draft controlling door for domestic water heaters, stoves, and the like. 2,452,180, Oct. 26.
Burns, Laurence, Swampscott, assignor to Sylvania Electric Products Inc., Salem, Mass. Nonactinic fluorescent lamp. 2,452,518, Oct. 26.
Burns, William H.: *See*—
Watson, Gavin, Burns, and Galanty.
Butow, Douglas L., Evanston, Ill. Hydraulic torque conversion apparatus. 2,452,290, Oct. 26.
Cady, George H., Providence, and E. W. Adams, assignors to Cranston Print Works Company, Cranston, R. I. Stopping mechanism for textile apparatus. 2,452,223, Oct. 26.
Campbell, Nelson S., Greenwich, Conn. Head for golf clubs. 2,452,100, Oct. 26.
Campbell, Walter H., Arlington County, Va. Electrical drop signal device. 2,452,034, Oct. 26.
Candler, James N., Grosse Pointe, Mich., assignor to Borg-Warner Corporation. Torque control for helicopters. 2,452,335, Oct. 26.
Carboloy Company, Inc., assignee: *See*—
Lucas, George W.
Carilox Corporation, assignee: *See*—
Beach, Walter A.
Carlisle, Paul J., Wilmington, Del., and W. S. Hinegardner, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Fungicidal compositions. 2,452,429, Oct. 26.
Carpenter, Edith, Chicago, Ill. Sanitary napkin holding means. 2,452,181, Oct. 26.
Catron, Joe D., Rosenberg, Tex. Revolving card file and posting table. 2,452,291, Oct. 26.
Celanese Corporation of America, assignee: *See*—
Allan, John.
Rooney, James H., Sharphouse, and Hawtin.
Central Commercial Company, assignee: *See*—
Koehl, James A.
Chadwick, George A., Detroit, Mich., and P. H. Girouard, Washington, D. C. Door operating mechanism for powder hoists. 2,452,035, Oct. 26.
Chance, Franklin S.: *See*—
Kvalnes, Hamline M., and Chance.
Cheatum, Leo G.: *See*—
Jones, Frank D., and Cheatum.
Chemical Construction Corporation, assignee: *See*—
Broughton, Harold E.
Chilkson Tool Company, assignee: *See*—
Phillips, Dwight M.
Warren, Doyle.
Chrysler Corporation, assignee: *See*—
Ball, Thomas M.
Cousino, Walter P.
Dickson, John B.
Goode, Gilbert C.
Herreshoff, Alexander G., and Staley.
Platzer, George E.
Ciba Limited, assignee: *See*—
Ruegg, Rudolf.
Straub, Fritz, Widmer, and Schneider.
Cisco, Edward S., Highland, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Drip pan hinge for refrigerator cars. 2,452,101, Oct. 26.
Clardy, Frederick B., Portsmouth, Va. Determining nickel content of steel. 2,452,036, Oct. 26.
Clark, David M., Worcester, Mass., and G. A. Hallenbeck, Rochester, Minn., said Hallenbeck assignor to said Clark. Quick disconnect coupling. 2,452,430, Oct. 26.
Clawson, William T., Rock Hill, S. C. Writing arm for collapsible chairs. 2,452,182, Oct. 26.
Clawson, William T., Rock Hill, S. C. Detachable book support for chairs. 2,452,183, Oct. 26.
Cloud, Kenneth M.: *See*—
Elleman, Tom, and Cloud.
Cocanour, John B., San Jose, assignor to Colvin-Templeton, Inc., Oakland, Calif. Refrigerating system defrosted by hot liquid refrigerants. 2,452,102, Oct. 26.
Colt, Burton C., Jr., assignor to Tri-State Engineering Company, Washington, Pa. Pallet of the load-supporting type, with casters. 2,452,356, Oct. 26.
Cole, Dalton E., Chicago, Ill. Connector. 2,452,184, Oct. 26.
Colgate-Palmolive-Peet Company, assignee: *See*—
Ross, John.
Collett, James D., Jr., Houston, Tex. Gas sampling apparatus. 2,452,224, Oct. 26.
Collins, Fred V., Des Plaines, assignor to W. F. Stahl, Kenilworth, Ill. Manufacture of plastic containers. 2,452,357, Oct. 26.
Collins, Ralph D., assignee, et al.: *See*—
Arnold, Ralph J., MacDonald, and Collins.
Crehan, William J., and Arnold.
Collins, Ralph D., Beverly Hills, Calif., assignor of one-half to Kellogg Switchboard and Supply Company. Making elastic coil structures with uncoiled ends. 2,452,432, Oct. 26.
Collins, Ralph D., Beverly Hills, Calif., assignor of one-half to Kellogg Switchboard and Supply Company. Method and apparatus for making elastic coil cables with a longitudinal end. 2,452,433, Oct. 26.
Collins, Ralph D., Beverly Hills, Calif., and W. J. Drigot, Chicago, Ill., said Drigot assignor to Kellogg Switchboard and Supply Company. Production of vulcanizable elastic coil cables having reversingly coiled portions. 2,452,431, Oct. 26.
Coloccia, Philip T., Hillside, N. J. Hair curling device. 2,452,225, Oct. 26.
Colvin-Templeton, Inc., assignee: *See*—
Concanour, John B.
Cone, Charles N., assignor to M and M Wood Working Company, Portland, Oreg. Laminated product and manufacture. 2,452,226, Oct. 26.
Conradt, Julius A. and R. J., Rochester, N. Y. Headrest. 2,452,103, Oct. 26.
Conradt, Richard J.: *See*—
Conradt, Julius A. and R. J.
Continental Motors Corporation, assignee: *See*—
Elleman, Tom, and Cloud.
Continental Oil Company, assignee: *See*—
Athy, Lawrence F.
Cook, George W., Washington, D. C. Electronic high-voltage regulator. 2,452,037, Oct. 26.
Cooper, David M., Huddersfield, England. Pile fabric. 2,452,104, Oct. 26.
Cordwares Company, Inc., The, assignee: *See*—
Marti, Joaquin M.
Corning Glass Works, assignee: *See*—
McGregor, Rob R., and Warrick.

Cosentino, Joseph M., Baltimore, Md. Shock absorbing system for vehicles. 2,452,105, Oct. 26.
Cotchefer, Gordon H., Long Beach, Calif. Radio antenna. 2,452,106, Oct. 26.
Cousino, Walter P., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Pressure intensifier. 2,452,292, Oct. 26.
Crane, Carl J., Dayton, Ohio. Photoelectric radio compass trainer control. 2,452,038, Oct. 26.
Crane, Carl J., Dayton, Ohio. Apparatus for simulating wind effects in aviation ground trainers. 2,452,039, Oct. 26.
Crane Co., assignee: *See*—
Bryant, Corwin W.
Cranney, Beatrice, Seattle, Wash. Venetian blind cleaner. 2,452,107, Oct. 26.
Cranston Print Works Company, assignee: *See*—
Cady, George H., and Adams.
Crehan, William J., Chicago, and R. J. Arnold, Western Springs, assignors, by mesne assignments, to Kellogg Switchboard and Supply Company, Chicago, Ill., and R. D. Collins, Beverly Hills, Calif. Apparatus for making elastic coil structures with longitudinal ends. 2,452,434, Oct. 26.
Crompton & Knowles Loom Works, assignee: *See*—
Kronoff, Clarence R., and Sepavich.
Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Receiver muting circuit. 2,452,436, Oct. 26.
Crouse-Hinds Company, assignee: *See*—
Petree, Jay R.
Crowther, Edmond C., Philadelphia, Pa. Fastening device. 2,452,437, Oct. 26.
Curtiss-Wright Corporation, assignee: *See*—
Flader, Frederic E.
Cutler-Hammer, Inc., assignee: *See*—
James, Kenneth D.
Newman, John M.
Dahlberg, Ernst E.: *See*—
Bergvall, Knut L., and Dahlberg.
Dahlstrand, Hans P., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Flanged joint. 2,452,227, Oct. 26.
Daley, Charles, West Newton, Mass., assignor to Radio Corporation of America. Preparing metal for metal-to-glass seals. 2,452,519, Oct. 26.
Dath, George E., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism. 2,452,108, Oct. 26.
Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Locking means for rotary actuating bars of door fasteners. 2,452,109, Oct. 26.
Davis, Cortland W., Summitville, Ind., assignor to The Mantle Lamp Company of America, Chicago, Ill. Mounting for inverted incandescent mantles. 2,452,438, Oct. 26.
Davis, Helen C., London, England. Supporting stand for flatirons. 2,452,439, Oct. 26.
Dawes, Robert T. and F. T., Hudson, Mass. Elastic parachute shroud and making it. 2,452,228, Oct. 26.
De Bray, Glenn L., and A. Morgan, Los Angeles, Calif. Pessary and manipulating handle assembly. 2,452,229, Oct. 26.
De Curtis, Frank, Queens Village, N. Y. Positive and lock lateral shoe stretching mechanism. 2,452,440, Oct. 26.
Deere Manufacturing Co., assignee: *See*—
Jones, Frank D., and Cheatum.
De Forest, Lee, Los Angeles, Calif. Color television system. 2,452,293, Oct. 26.
De Long, Fred J.: *See*—
De Long, Fred Joe and F. J.
De Long, Fred Joe and F. J., Jefferson City, Mo. Axle and fifth wheel assembly for farm wagons. 2,452,358, Oct. 26.
Denniston, Adolph L., Plainfield, N. J., and S. H. Martin, Thomaston, Conn., assignors to General Time Instruments Corporation, New York, N. Y. Job time recorder system. 2,452,359, Oct. 26.
Derham, Philip A., Rosemont, Pa., assignor to Victor Metal Products Corporation, Brooklyn, N. Y. Rotary lock box. 2,452,230, Oct. 26.
Dickson, John B., assignor to Chrysler Corporation, Highland Park, Mich. Instrument lighting. 2,452,294, Oct. 26.
Dictaphone Corporation, assignee: *See*—
Leitner, Richard G., and Rieber.
Doble, George N., Jr., assignor to Supervision, Incorporated, Cleveland, Ohio. Folder. 2,452,231, Oct. 26.
Dourte, George J., Denver, Colo. Auxiliary safety wheels for use on automobiles and trucks. 2,452,110, Oct. 26.
Dow Chemical Company, The, assignee: *See*—
Stephenson, Wilbur T.
Drackett Company, The: *See*—
Gangloff, Wilmer C.
Drennan, Harry E., Hot Springs, Ark., assignor to Phillips Petroleum Company. Solvent extraction of mercaptans. 2,452,040, Oct. 26.
Drexler, Chas., Co., Inc., assignee: *See*—
Brownlee, Dalmar T.
Drigot, William J.: *See*—
Collins, Ralph D., and Drigot.
Dube, John E., Clayton, assignor to Alco Valve Company, University City, Mo. Regulator valve having a capillary tube expansion passage. 2,452,441, Oct. 26.

Eaton Pump Manufacturing Company, Inc., assignee: *See*—
Jones, Guy A.
Eckert, William F., Rochelle, Ill. Explosion-proof starter. 2,452,112, Oct. 26.
Edwards, Andrew W., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Automatic reclosing circuit breaker. 2,452,442, Oct. 26.
Electric Steel Foundry, assignee: *See*—
Johnson, Clarence K.
Electric Storage Battery Company, The, assignee: *See*—
Murphy, Harold P.
Elleman, Tom, Toledo, Ohio, and K. M. Cloud, assignors to Continental Motors Corporation, Muskegon, Mich. Fluid pump. 2,452,185, Oct. 26.
Elliott, George S., Detroit, Mich. Faucet. 2,452,295, Oct. 26.
Elmore, Kelly L., near Sheffield, Ala., assignor to Tennessee Valley Authority. Making calcium aluminate sinter. 2,452,041, Oct. 26.
Elsea, Jacob O., Kokomo, Ind., assignor to General Motors Corporation, Detroit, Mich. Sequential turret tuner. 2,452,443, Oct. 26.
Enerud, Olaf C., Brooklyn, N. Y. Adjustable pitch airplane propeller. 2,452,444, Oct. 26.
English Numbering Machines Limited, assignee: *See*—
Namenyi-Katz, Laszlo.
Ericsson, Arnold H., Jarna, Sweden. Bread cutting board with crumb tray. 2,452,445, Oct. 26.
Erisman, John L., Oak Park, Ill., assignor to Link-Belt Company. Apparatus for treating flowable solids. 2,452,362, Oct. 26.
Eslinger, Genevieve B., assignee: *See*—
Eslinger, Wallace V., and Barton.
Eslinger, Wallace V., and W. N. Barton, Arlington; said Eslinger assignor to G. G. Eslinger, Falls Church, Va. Pressure indicator. 2,452,296, Oct. 26.
Espley, Dennis C., North Wembley, assignor to The General Electric Company Limited, London, England. Switch for high-frequency electrical oscillations. 2,452,113, Oct. 26.
Everett, John L., and A. Raines, Philadelphia, Pa. Transmitter for self-synchronous systems. 2,452,042, Oct. 26.
Exhibit Supply Company, assignee: *See*—
Hughes, Edward H.
Faelten, Carl R.: *See*—
Morgan, Willard L., and Faelten.
Fahlström, Otto L., Stockholm, Sweden. Knee joint for prostheses. 2,452,446, Oct. 26.
Falk Corporation, The, assignee: *See*—
Falk, Louis W., Schmitter, and Maurer.
Falk, Louis W., Milwaukee, and W. P. Schmitter and G. P. Maurer, Wauwatosa, assignors to The Falk Corporation, Milwaukee, Wis. Gear shaving machine. 2,452,520, Oct. 26.
Farkas, Francis S., Forest Hills, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Balanced wave filter. 2,452,114, Oct. 26.
Feasey, Charles E., Enfield, assignor to James Armstrong & Company Limited, London, England. Power actuated garment and like presses. 2,452,115, Oct. 26.
Felton, George F., Millers Falls, Mass. Holding device. 2,452,116, Oct. 26.
Fenwal Incorporated, assignee: *See*—
Smith, Norman J.
Ferger, Hulbert K., Flushing, assignor of one-half to J. B. Thomson, Plandome, N. Y. Sliding antifriction bearing. 2,452,117, Oct. 26.
Fickel, Isaac J., assignee: *See*—
Zahller, Virgil.

Fischer, William V., assignor to The Air-Flo Compressor Company, Akron, Ohio. Compressor. 2,452,232, Oct. 26.

Fisher, Charles H.: *See*—
Rehberg, Chessie E., and Fisher.

Flader, Fredric E., Kenmore, assignor, by mesne assignments, to Curtiss-Wright Corporation. Arresting gear. 2,452,447, Oct. 26.

Flett, Lawrence H., Scarsdale, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Derivatives of sulfosuccinamic acid. 2,452,043, Oct. 26.

Floraday, Burton S., Toledo, Ohio, assignor to Marvel Equipment Corporation, Detroit, Mich. Vehicle window regulator. 2,452,448, Oct. 26.

Florence, Dewey A., Philadelphia, Pa. Fire extinguishing waste paper receptacle. 2,452,118, Oct. 26.

Flotron, Frank E., St. Louis, Mo. Novelty optical device. 2,452,363, Oct. 26.

Fluharty, Omar L., Indianapolis, Ind. Saddle clamp structure. 2,452,186, Oct. 26.

Forsyth, Ralph K., Santa Barbara, Calif. Signal trainer. 2,452,449, Oct. 26.

Fowler, Ival G., Toledo, and D. W. Dunipace, Perrysburg, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Method and apparatus for producing optical elements from commercial plate glass. 2,452,364, Oct. 26.

Fox, Benjamin, New York, N. Y., assignor to the United States of America as represented by the Secretary of War. High emission cathode. 2,452,044, Oct. 26.

Fredenburg, Charles H., Nyssa, Oreg. Therapeutic device. 2,452,450, Oct. 26.

Frederick, Oscar C., Springfield, Pa., assignor to General Electric Company. Control system. 2,452,365, Oct. 26.

Freeland Spool & Bobbin Corp.: *See*—
Markle, George B., Jr.

Freund, Robert R., Mount Carmel, Ill. Patient adjustable foot section for articulated beds. 2,452,366, Oct. 26.

Beare, Charles H.
Elsea, Jacob O.
Schneider, Paul L., and Dudderar.
Schwartz, Fred J.

General Time Instruments Corporation: *See*—
Denniston, Adolph L., and Martin.

Gerard, Roy H., Oakland, Calif., and R. M. Smith, Jeannette, Pa., assignors to Pacific Electric Manufacturing Corporation, San Francisco, Calif. Permanent fault isolator time-delay switch. 2,452,233, Oct. 26.

Gerdes, John C., Glendale, Calif. Bed heater. 2,452,234, Oct. 26.

Ginsberg, Maxwell R., assignee: *See*—
Jantzen, Frederick H.

Girnus, Walt R., Spokane, Wash. Grapple. 2,452,452, Oct. 26.

Girouard, Philias H.: *See*—
Chadwick, George A., and Girouard.

Gobel, Charles, Philadelphia, Pa. Line tightener. 2,452,368, Oct. 26.

Gold, Leon J., Shorewood, Wis., assignor to Miliprint, Inc., Milwaukee, Wis. Blackboard. 2,452,235, Oct. 26.

Golden State Company, Ltd., assignee: *See*—
Peebles, David D.

Goode, Gilbert C., Birmingham, assignor to Chrysler Corporation, Highland Park, Mich. Starter. 2,452,298, Oct. 26.

Gorne, Herbert D., Bellingham, Wash. Hanger. 2,452,120, Oct. 26.

Gould, Howard C., Brooklyn, N. Y. Tape dispenser. 2,452,299, Oct. 26.

Graham, Roy F., assignor to Stok-A-Fire Company, Inc., University City, Mo. Stoker provided with a metering control to determine fuel and air feed. 2,452,453, Oct. 26.

Graham, Roy F., assignor to Stok-A-Fire Company, Inc., University City, Mo. Device for facilitating stoker installations. 2,452,454, Oct. 26.

Graham, Thomas E., assignor of one-third to L. J. Miller, Oklahoma City, Okla. Ladder attachment. 2,452,455, Oct. 26.

Grahame, James H., Mount Vernon, assignor to The Texas Company, New York, N. Y. Conversion of synthetic hydrocarbons containing oxygenated compounds of hydrocarbons of high octane value. 2,452,121, Oct. 26.

Grant, Tom C., Oklahoma City, Okla. Hair curler. 2,452,456, Oct. 26.

Gravenhorst, Everett, and R. E. Vaughn, assignor to The Glenn L. Martin Company, Middle River, Md. Self-bleeding hydraulic cylinder. 2,452,369, Oct. 26.

Gray, Griffin W., and C. B. Wade, Roanoke, Va. Bolt puller. 2,452,457, Oct. 26.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of nitriles. 2,452,187, Oct. 26.

Grote Manufacturing Company, The, assignee: *See*—
Ryder, Charles D.

Guenther, Arthur E., Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Yarn-advancing reel. 2,452,370, Oct. 26.

Gulf Oil Corporation, assignee: *See*—
Pellettere, Joseph A.
Willard, Herbert B.

Gumaer, Percy W., West Englewood, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Apparatus and process for testing materials. 2,452,122, Oct. 26.

Guttormsen, Joseph P., Kenosha, Wis. Handle bar shock absorber. 2,452,371, Oct. 26.

Hahn, Clarence J., Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Hub structure. 2,452,458, Oct. 26.

Hallenbeck, George A.: *See*—
Clark, David M., and Hallenbeck.

Hamblin, Clyde M., Washington, D. C. Construction of flexible hose. 2,452,047, Oct. 26.

Hammond Iron Works, assignee: *See*—
Plummer, Fred L.

Hanger, James E., III, assignor to Metal Limb Manufacturers, Inc., Washington, D. C. Knee structure for artificial legs. 2,452,459, Oct. 26.

Hansen, William W., and R. H. Varian, Garden City, N. Y., assignors to The Sperry Corporation. Frequency conversion apparatus. 2,452,048, Oct. 26.

Hansley, Virgil L., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Separation of 1-cyanobutadiene-1,3 from acetic acid by azeotropic distillation. 2,452,460, Oct. 26.

Harkness, Joseph R., Schenectady, N. Y., assignor to General Electric Company. Cam mechanism. 2,452,372, Oct. 26.

Harley, Earle L., Brooklyn, assignor to H. H. Heinrich, Inc., New York, N. Y. Registering flat bed color printing elements with their fixed registry elements. 2,452,373, Oct. 26.

Harris, Asa J., Long Beach, Calif. Door latch. 2,452,461, Oct. 26.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Lindenhovius, Hendrik J.
Payne, Charles E.
Siezen, Gerrit J.
Strutt, Maximiliaan J. O., and van der Ziel.
Van der Heem, Jan.

Hartup, William O.: *See*—
Hayward, James R., Schild, and Hartup.

Harvel Corporation, The, assignee: *See*—
Harvey, Mortimer T.

Harvey, Mortimer T., South Orange, N. J., assignor to The Harvel Corporation. Anacardic-acrolein resins and method for their production. 2,452,374, Oct. 26.

Hauck, Vernon D., Towson, Md., assignor to Bendix Aviation Corporation, South Bend, Ind. Combined package and filling device for batteries or hollow bodies. 2,452,049, Oct. 26.

Hawtin, Philip R.: *See*—
Rooney, James H., Sharphouse, and Hawtin.

Hayward, James R., Washington, J. A. Schild, and W. O. Hartup, Columbus, Ind., assignors, by mesne assignments, to McCord Corporation, Detroit, Mich. Combined machine for feeding, bending, and flattening tubing. 2,452,050, Oct. 26.

Hedenburg, Oscar F., Pittsburgh, Pa., assignor, by mesne assignments, to H. W. Moburg, Toledo, Ohio. Methylenedioxyphenyl compound as insecticide and pyrethrin synergist. 2,452,188, Oct. 26.

Heinrich, H. H., Inc., assignee: *See*—
Harley, Earle L.

Helmkamp, Richard F., Jersey City, N. J., assignor to Air Reduction Company, Incorporated. Universal torch machine. 2,452,189, Oct. 26.

Heltzel, John N., Warren, Ohio. Concrete expansion joint. 2,452,462, Oct. 26.

Henshaw, Thomas A.: *See*—
Leech, Harold C., and Henshaw.

Herbert, Donald H., Spokane, Wash. Building block. 2,452,463, Oct. 26.

Herman, James H., Jr., Temple, Tex. Mortar applying device. 2,452,464, Oct. 26.

Herreshoff, Alexander G., Grosse Pointe, and A. C. Staley, Birmingham, assignors to Chrysler Corporation, Highland Park, Mich. Supercharger. 2,452,300, Oct. 26.

Hershey, Ralph E., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Relay syatem. 2,452,051, Oct. 26.

Herzog, Herman, Detroit, Mich. Flowerpot holder. 2,452,236, Oct. 26.

Hester, Millard E., Seattle, Wash. Dial test indicator clamp. 2,452,301, Oct. 26.

Hetzel, Stanford J.: *See*—
Kennedy, Robert M., and Hetzel.

Hetzel, Stanford J., Cheltenham, and R. M. Kennedy, Drexel Hill, assignors to Sun Oil Company, Philadelphia, Pa. Polymerization of olefins. 2,452,190, Oct. 26.

Hibbard, Frank H., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Selectively responsive device. 2,452,052, Oct. 26.

Hicks, Frederick T., assignee: *See*—
Sand, Robert T.

Higgins, Andrew J., assignee: *See*—
Sprague, Theodore, IV.

Hinegardner, Wilbie S., et al.: *See*—
Carlisle, Paul J., and Hinegardner.

Hines, Claude M., Verona, and C. D. Stewart, Wilkinsburg, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Speed differential detecting apparatus. 2,452,191, Oct. 26.

Hirshbergh, Julius H., Los Angeles, Calif. Cabinet having automatically shiftable mirror. 2,452,375, Oct. 26.

Hitchen, Herbert, assignor to British Ropes Limited, Doncaster, England. Cable tensiometer. 2,452,302, Oct. 26.

Hjelmblad, Karl W. J., Alsten, Sweden. Arrangement in grinding machines. 2,452,123, Oct. 26.

Hoburg, Francis: *See*—
Hoburg, Mason A. and F.

Hoburg, Mason A. and F., St. Helena, Calif; said F. Hoburg assignor to said M. A. Hoburg. Watering trough. 2,452,237, Oct. 26.

Hollingsworth, Raphael, Hedrick, Iowa. Insert for changing the compression ratio of internal-combustion engines. 2,452,238, Oct. 26.

Holstebroe, Kaye B., Gildersleeve, and L. Wimmer, Middletown, assignors to Standard-Knapp Corporation, Portland, Conn. Bottle packing machine. 2,452,376, Oct. 26.

Honen, Carl J., assignor to The McKay Machine Company, Youngstown, Ohio. Multiple welding pressure roll assembly for electric weld tube mills. 2,452,303, Oct. 26.

Hooker Electrochemical Company, assignee: *See*—
Osborne, Sidney G.

Hosking, Richard T., Chicago, Ill. Lock nut. 2,452,192, Oct. 26.

Hotpoint Inc., assignee: *See*—
Vogel, Oliver G., and Kirk.

Houseman, George A., Phoenix, Ariz. Window latch. 2,452,377, Oct. 26.

Howerton, William W.: *See*—
Woodberry, David L., Howerton, and Dunbar.

Huber, Robert, Paris, France, assignor to R. P. Pescara, Lisboa, Portugal. Free piston engine compressed air accumulator, variable volume. 2,452,193, Oct. 26.

Huber, Robert, Paris, France, assignor to R. P. Pescara, Lisboa, Portugal. Free piston machine. 2,452,194, Oct. 26.

Hudson, Charles J., Detroit, Mich. Cable reel. 2,452,378, Oct. 26.

Huge, Henry M., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Telephone circuit. 2,452,239, Oct. 26.

Hughes, Burton S., assignor to Zaremba Company, Buffalo, N. Y. Centrifugal separator. 2,452,465, Oct. 26.

Hughes, Edward H., assignor to Exhibit Supply Company, Chicago, Ill. Step-up mechanism. 2,452,030, Oct. 26.

Hurt, John A., Carterville, Mo. Chimney cap. 2,452,240, Oct. 26.

Huston, Frank G.: *See*—
Huston, Victor J. and F. G.

Huston, Victor J. and F. G., Muskegon, Mich. Hydraulic scale. 2,452,124, Oct. 26.

Hutter, William H., Wheaton, Ill. Phonograph needle. 2,452,304, Oct. 26.

Ilfeld, Max L., U. S. Army. Floating mine. 2,452,053, Oct. 26.

Imperial Typewriter Company Limited, assignee: *See*—
Brumhill, Claude W.

Indiana Steel & Wire Company, assignee: *See*—
Kitselman, Harry L.

Indium Corporation of America, The: *See*—
Dyer, John R., Jr.

Induction Heating Corp., assignee: *See*—
Stanton, Robert J., and Lowry.

Ingalls, David, Westfield, and J. H. Petersen, Union, assignors, by mesne assignments, to Titeflex, Inc., Newark, N. J. Forming and changing the cross section of convoluted metal tubing. 2,452,125, Oct. 26.

Institute of Paper Chemistry, The, assignee: *See*—
Wells, Sidney D.

Irwin, Frank N., Jr., South Miami, Fla. Sealer. 2,452,126, Oct. 26.

Jacobson, Ernest: *See*—
Obernauer, William, and Jacobson.

James, Kenneth D., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Counterelectromotive force motor starter control system. 2,452,127, Oct. 26.

Jantzen, Frederick H., Bronx, N. Y., assignor of fifty per cent to M. R. Ginsberg. Measuring implement. 2,452,241, Oct. 26.

Jarvis, Samuel F.: *See*—
Moran, Don E., and Jarvis.

Jaswell, Roy, Smithfield, R. I. Sealing tip for well casings. 2,452,466, Oct. 26.

Jeffrey Manufacturing Company, The, assignee: *See*—
Lee, Arthur L.

Johnson, Carl E., Alhambra, Calif. Crate for water bottles or acid carboys. 2,452,195, Oct. 26.

Johnson, Charles E., Belmont, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Splitting machine. 2,452,128, Oct. 26.

Johnson, Clarence K., assignor to Electric Steel Foundry, Portland, Oreg. Pintle chain. 2,452,242, Oct. 26.

Johnson, Earl B., Freehold, N. J. Drinking fountain. 2,452,305, Oct. 26.

Johnson, George H., assignor to The Atwood Vacuum Machine Company, Rockford, Ill. Self-tipping conveyer bucket. 2,452,243, Oct. 26.

Johnson, James P., Shaker Heights, Ohio. Slidable abutment rotary pump. 2,452,467, Oct. 26.

Johnson, James P., Shaker Heights, Ohio. Reciprocating abutment fluid pump. 2,452,468, Oct. 26.

Johnson, James P., Shaker Heights, Ohio. Seal. 2,452,469, Oct. 26.

Johnson, James P., Shaker Heights, Ohio. Distributing device. 2,452,470, Oct. 26.

Johnson, William A., Smithfield, and E. E. Moore, Fort Worth, Tex.; said Johnson assignor to said Moore. Locking device for truck and trailer doors. 2,452,521, Oct. 26.

Jones, Frank D., and L. G. Cheatum, Ottumwa, Iowa, assignors to Deere Manufacturing Co. Power belt retaining device. 2,452,306, Oct. 26.

Jones, Grinnell, Cambridge, W. Juda, Belmont, and S. Soll, Boston, Mass., assignors, by mesne assignments, to Albi Manufacturing Co., Incorporated. Fire-retardant composition and process. 2,452,054, Oct. 26.

Jones, Grinnell, W. Juda, Cambridge, and S. Soll, Borton, Mass., assignors, by mesne assignments, to Albi Manufacturing Co., Incorporated. Amylaceous fire-retardant composition. 2,452,055, Oct. 26.

Jones, Guy A., Long Beach, Calif., assignor to Eaton Pump Manufacturing Company, Inc. Rotary vane pump. 2,452,471, Oct. 26.

Joy Manufacturing Company, assignee: *See*—
Osgood, Charles F.
Sullinger, Francis E.

Juda, Walter: *See*—
Jones, Grinnell, Juda, and Soll.

Kabitsch, Ruth L.: *See*—
Allen, La Bron R. and J. H., and Kabitsch.

Kaldor, Irving, San Francisco, Calif. Sanitary garter belt. 2,452,129, Oct. 26.

Kasparek, Wesley J., Columbus, Ga. Lubrication failure detector switch. 2,452,379, Oct. 26.

Kather, Erich N., South Lincoln, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical discharge device. 2,452,056, Oct. 26.

Kauffmann, Hans O.: *See*—
Shanley, Edward S., and Kauffmann.

Kay-Fries Chemicals, Inc., assignee: *See*—
Bitler, William P., Aschner, and Nicholl.

Kayser, Guillaume M. A., Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C. Spinning high tenacity viscose rayon. 2,452,130, Oct. 26.

Keating, Richard T., Oak Park, Ill. Combustion tube heater for cooking containers. 2,452,472, Oct. 26.

Kehoe, James W., Wauwatosa, Wis. Flexible leakproof coupling. 2,452,057, Oct. 26.

Keith Kenneth M. *See*—
Ronning, Martin, and Keith.

Kelley, William J., Chicago, Ill. Stabilizing roadbeds. 2,452,196, Oct. 26.

Kellogg, Spencer, 2nd, Glen Head, N. Y., assignor to The Sperry Corporation. Gyroscopic flight instrument. 2,452,473, Oct. 26.

Kellogg Switchboard and Supply Company, assignee: *See*—
Collins, Ralph D.
Collins, Ralph D., and Drigot.

Kellogg Switchboard and Supply Company, assignee, et al.: *See*—
Arnold, Ralph J., MacDonald, and Collins.
Crehan, William J., and Arnold.

Kemmer, Paul H., Fairfield, and E. R. Weaver, Dayton, Ohio. Tension patch. 2,452,058, Oct. 26.

Kennedy, Claude L.: *See*—
Spencer, James A., Kennedy, and Thomas.

Kennedy, Robert M.: *See*—
Hetzel, Stanford J., and Kennedy.

Kennedy, Theodore R., Lower Makefield Township, Bucks County, Pa., assignor to Ajax Electrothermic Corporation, Trenton, N. J. Indpction furnace for variable heat patterns. 2,452,197, Oct. 26.

Kenyon, William O.: *See*—
Unruh, Cornelius C., and Kenyon.

King, John L., assignor to Miracle Lubricating Company, Detroit, Mich. Welding electrode holder. 2,452,199, Oct. 26.

Kinzer, Charles W., Greenbelt, Md. Record posting apparatus. 2,452,059, Oct. 26.

Kirk, Francis E.: *See*—
Vogel, Oliver G., and Kirk.

Kitselman, Harry L., assignor to Indiana Steel & Wire Company, Muncie, Ind. Serving tool. 2,452,474, Oct. 26.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Ignition indicating device for welding systems. 2,452,060, Oct. 26.

Kluge, Herman D.: *See*—
Patterson, John A., and Kluge.

Kluge, Herman D., and J. A. Patterson, Wappingers Falls, assignors to The Texas Company, New York, N. Y. Oxidation-inhibited lubricating compositions. 2,452,320, Oct. 26.

Kluge, Herman D., Wappingers Falls, and J. A. Patterson, Newburgh, assignors to The Texas Company, New York, N. Y. Rust preventive composition. 2,452,321, Oct. 26.

Knudsen, Knud J., Waterbury, assignor to The Lewis Engineering Company, Naugatuck, Conn. Electrical ratio meter circuit. 2,452,244, Oct. 26.

Koehl, James A., Evanston, assignor to Central Commercial Company, Chicago, Ill. Musical key control. 2,452,307, Oct. 26.

Kollman, Alexander A., Los Angeles, Calif. Hose clamp. 2,452,245, Oct. 26.

Koslowski, John: *See*—
Volkery, Bernhard, and Koslowski.

Kraft, Marie J., Three Oaks, Mich., and M. Durey, Cleveland, Ohio, assignors to The Warren Featherbone Co., Three Oaks, Mich. Convertible raincoat or cape. 2,452,475, Oct. 26.

Krim, Norman B., Newton Highlands, assignor to Raytheon Manufacturing Company, Newton, Mass. Thermionic tube structure. 2,452,061, Oct. 26.

Kronhaus, Semen, Los Angeles, Calif. Clothesline device. 2,452,246, Oct. 26.

Kronoff, Clarence R., and V. F. Separich, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Reversing mechanism for looms. 2,452,380, Oct. 26.

Kruck, Ralph E., Longmeadow, Mass. Cosmetic device. 2,452,131, Oct. 26.

Kvalnes, Hamline M., and F. S. Chance, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Treatment of porous material. 2,452,200, Oct. 26.

Lambros, George C., New York, N. Y. Plating palladium and plating bath therefor. 2,452,308, Oct. 26.

Lange, Edward H., Baltimore, Md. Diode modulator. 2,452,132, Oct. 26.

Larsh, Everett P., Dayton, Ohio. Piston rod connecting device. 2,452,247, Oct. 26.

Lee, Arthur L., Upper Arlington, Ohio, assignor by mesne assignments, to The Jeffrey Manufacturing Company. Electrical mine apparatus. 2,452,248, Oct. 26.

Leech, Harold C., and T. A. Henshaw, Elland, England. Portable fire extinguisher. 2,452,309, Oct. 26.

Leeds, Winthrop M., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,452,476, Oct. 26.

Leeds, Winthrop M., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,452,477, Oct. 26.

Leiske, Roy R., Milwaukee, Wis. Drier for granular plastic. 2,452,249, Oct. 26.

Leitner, Richard G., and W. K. Rieber, West Los Angeles, Calif., assignor, by mesne assignments, to Dictaphone Corporation, New York, N. Y. Phonographic apparatus. 2,452,133, Oct. 26.

Le Van, James D., Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical discharge tube. 2,452,062, Oct. 26.

Leverenz, Humboldt, W., South Orange, N. J., assignor to Radio Corporation of America. Luminescent screen and developing light. 2,452,522, Oct. 26.

Leverenz, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Luminescent screen. 2,452,523, Oct. 26.

Levinson, Sidney O., and F. Oppenheimer, assignors to Michael Reese Research Foundation, Chicago, Ill. Sterilizing liquids. 2,452,201, Oct. 26.

Lewis Engineering Company, The, assignee: *See*—
Knudsen, Knud J.

Libbey-Owens-Ford Glass Company: *See*—
Fowler, Ival G., and Dunipace.
Paddock, Ormond H., and Pearse.
Philbin, William A.
Zentis, William A.

Liber, Harry, Morristown, and D. R. Beeman, Wharton, N. J. Detonator disk. 2,452,063, Oct. 26.

Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Radio-frequency distributor apparatus. 2,452,202, Oct. 26.

Lindenhovius, Hendrik J., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Low direct current voltage regulating circuit. 2,452,381, Oct. 26.

Lindsay, James G., assignor to F. C. Marchant, San Dimas, Calif. Heater starting and lighting device. 2,452,310, Oct. 26.

Link-Belt Company: *See*—
Erisman, John L.

Liston, Marcia B., assignee, et al.: *See*—
Bucknell, Ernest H., and Bletcher.

Lochner, Albert T., Louisville, Ky. Braiding machine carrier. 2,452,250, Oct. 26.

Long, Emmet S., Los Angeles, Calif. Apparatus for molding rubber and plastic materials. 2,452,382, Oct. 26.

Lorain Products Corporation, assignee: *See*—
Huge, Henry M.

Lowe, John C., Quakertown, assignor to H. R. Lutz, Sellersville, Pa. Dehydrator. 2,452,134, Oct. 26.

Lowe, John C., Quakertown, assignor to H. R. Lutz, Sellersville, Pa. Paper pulp machine. 2,452,135, Oct. 26.

Lowry, Christopher: *See*—
Stanton, Robert J., and Lowry.

Lucas, George W., St. Clair Shores, Mich., assignor to Carboloy Company, Inc. Diamond tool and making the same. 2,452,478, Oct. 26.

Luppino, Vincent J., Hartford, Conn. Concrete form waler bracket. 2,452,203, Oct. 26.

Lutz, Harmer R., assignee: *See*—
Lowe, John C.

M and M Wood Working Company, assignee: *See*—
Cone, Charles N.

MacDonald, William D.: *See*—
Arnold, Ralph J., MacDonald, and Collins.

Maciejowski, John J.: *See*—
Reinhold, Frank W., and Maciejowski.

Mantle Lamp Company of America, The, assignee: *See*—
Davis, Cortland W.

Marchant, Fay C., assignee: *See*—
Lindsay, James G.

Markle, George B., Jr., assignor to Freeland Spool & Bobbin Corp., Hazelton, Pa. Spool or bobbin. 2,452,383, Oct. 26.

Markusen, David L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electric motor control apparatus. 2,452,311, Oct. 26.

Marti, Joaquin M., New York, N. Y., assignor to The Cordwares Company, Inc. Braiding machine for endless belts or the like. 2,452,136, Oct. 26.

Martin, Eric L., Santa Monica, assignor to North American Aviation, Inc., Inglewood, Calif. Retractable landing gear fairing. 2,452,251, Oct. 26.

Martin, Glenn L., Company, The: *See*—
Gravenhorst, Everett, and Vaughn.

Martin, Samuel H.: *See*—
Denniston, Adolph L., and Martin.

Marvel Equipment Corporation, assignee: *See*—
Floraday, Burton S.

Masabny, Anthony N., Allston, Mass. Child's seat attachment for barbers' chairs. 2,452,252, Oct. 26.

Mason, Frank N., Charleroi, assignor of one-fourth to R. C. Mason, Pittsburgh, Pa. Undergarment. 2,452,479, Oct. 26.

Mason, James J., San Simon, Ariz. Defect detector for railway car wheels. 2,452,480, Oct. 26.

Mason, Robert C., assignee: *See*—
Mason, Frank N.

Maurer, George P.: *See*—
Falk, Louis W., Schmitter, and Maurer.

Maxwell, William H., assignee: *See*—
Wainwright, George R.

Mayrath, Robert L., Dodge City, Kans. Multiple motor speed synchronizing balancing device. 2,452,064, Oct. 26.

McCarthy, John F.: *See*—
Dunham, Frank.

McCord Corporation, assignee: *See*—
Hayward, James R., Schild, and Hartup.

McCormick, James A., Kalamazoo, Mich., assignor to Fruit and Produce Packing, Incorporated, Indianapolis, Ind. Method and packing structure for high packing handled baskets with fruit. 2,452,204, Oct. 26.

McDonald, Eugene F., Jr., Chicago, Ill. Automobile radio remote control. 2,452,384, Oct. 26.

McGill, Daniel F., Portland, Oreg. Floating sealing device. 2,452,253, Oct. 26.

McGoldrick, Raymond T.: *See*—
Allnutt, Ralph B., and McGoldrick.

McGregor, Rob R., Verona, and E. L. Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y. Liquid polymeric dimethyl silicones. 2,452,254, Oct. 26.

McKay Machine Company, The, assignee: *See*—
Honen, Carl J.

McKosky, Michael, New Haven, Conn. Spool adapter for rope layers or stranding machines. 2,452,255, Oct. 26.

McMurray, Ray H., Oakland, Calif. Seam opening device. 2,452,312, Oct. 26.

Merckel, Frederick G., Montclair, N. J. Color comparison apparatus. 2,452,385, Oct. 26.

Metal Limb Manufacturers, Inc.: *See*—
Hanger, James E.

Metal & Thermit Corporation, assignee: *See*—
Rollason, Ernest C., and van Someren.

Metten, Herbert, Boston, assignor to Sylvania Electric Products Inc., Salem, Mass. Protective grid for Geiger-Mueller tubes. 2,452,524, Oct. 26.

Milas, Nicholas A., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Ethers of vitamin A. 2,452,386, Oct. 26.

Miller, Loyal J., assignee: *See*—
Graham, Thomas E.

Milprint, Inc., assignee: *See*—
Gold, Leon J.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Berkholder, George H.
Markusen, David L.

Minneapolis-Moline Power Implement Company, assignee: *See*—
Ronning, Martin, and Keith.

Miracle Lubricating Company, assignee: *See*—
King, John L.

Moburg, Harold W., assignee: *See*—
Hedenburg, Oscar F.

Moore, Elmer E.: *See*—
Johnson, William A., and Moore.

Moore, John R.: *See*—
Victory, Frederick C., and Moore.

Moore Special Tool Co., Inc.: *See*—
Victory, Frederick C., and Moore.

Moran, Don E., and S. F. Jarvis, Schenectady, N. Y., assignor to General Electric Company. Electric switch. 2,452,065, Oct. 26.

Morehead, John H., and H. D. Schmidt, Long Beach, Calif. Hydraulic reel mount for warehouse trucks. 2,452,481, Oct. 26.

Morgan, Atwill: *See*—
De Bray, Glenn L., and Morgan.

Morgan, Willard L., Columbus, Ohio, assignor to American-Maize Products Company. Plasticized prolamine-base protein compositions. 2,452,314, Oct. 26.

Morgan, Willard L., Columbus, and C. R. Faelten, Clinton Township, Franklin County, Ohio, assignors to American-Maize Products Company. Plasticized prolamine-base protein compositions. 2,452,313, Oct. 26.

Morgan, Willard L., Columbus, and C. R. Faelten, Clinton Township, Franklin County, Ohio, assignors to American-Maize Products Company. Plasticized prolamine-base protein compositions. 2,452,315, Oct. 26.

Morley, Charles E., Detroit, Mich. Adjustable support. 2,452,316, Oct. 26.

Mossak, Edward R., Milwaukee, Wis. Plowshare. 2,452,387, Oct. 26.

Mueller, Joseph J., assignor to Auto Specialties Manufacturing Company, St. Joseph, Mich. Hydraulic jack. 2,452,482, Oct. 26.

Muller, Jacques, La Garenne-Colombes, France; vested in the Attorney General of the United States. Fluid handling mechanism. 2,452,256, Oct. 26.

Munschauer, Frederick E., Buffalo, and J. P. Wadleck, Kenmore, assignors to Niagara Machine & Tool Works, Buffalo, N. Y. Shear. 2,452,525, Oct. 26.

Murino, Matthew, New York, N. Y. Fluorescent lighting fixture. 2,452,137, Oct. 26.

Murphy, Harold P., Ridley Park, Pa., assignor to The Electric Storage Battery Company. Gas diffusion device for storage batteries. 2,452,066, Oct. 26.

Namenyi-Katz, Laszlo, assignor to English Numbering Machines Limited, London, England. Device for automatically inserting marking strips in piles of sheets. 2,452,138, Oct. 26.

National Radiator Company, The, assignee: *See*—
O'Sullivan, Frederick J., and du Pont.

National Tube Company, assignee: *See*—
Scharff, Fritz M.

Nergaard, Leon S., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device employing cavity resonators. 2,452,317, Oct. 26.

Nergaard, Leon S., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device utilizing cavity resonators. 2,452,318, Oct. 26.

Newhouse, Abe, Brooklyn, N. Y. Rotary pressing machine for continuous pressing operations. 2,452,483, Oct. 26.

Newman, John M., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Control for motor-driven apparatus. 2,452,257, Oct. 26.

Newton, Amos S., Ames, Iowa, assignor to the United States of America as represented by the United States Atomic Energy Commission. Preparing uranium deuteride. 2,452,139, Oct. 26.

Newton, Herman S., Temple, Tex. Sanding machine. 2,452,205, Oct. 26.

Newton, Herman S., Temple, Tex. Sanding machine. 2,452,206, Oct. 26.

Niagara Machine & Tool Works, assignee: *See*—
Munschauer, Frederick E., and Wadleck.

Nichol, Arthur V., Elkins Park, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Electromagnetic system. 2,452,388, Oct. 26.

Nicholl, Leonard: *See*—
Bitler, William P., Aschner, and Nicholl.

Niederhauser, Warren D.: *See*—
Bruson, Herman A., and Niederhauser.

Nielsen, Adolph, Oakland, Calif. Hand truck. 2,452,258, Oct. 26.

Noble, Kenneth B., Hartford, Conn. Ellipsograph. 2,452,484, Oct. 26.

North American Aviation, Inc., assignee: *See*—
Martin, Eric L.

Obernauer, William, assignor to E. Jacobson, New York, N. Y. Sealing and carrying device. 2,452,485, Oct. 26.

O'Clair, Norman W., Somerville, Mass. Self-contained portable film developing apparatus. 2,452,389, Oct. 26.

Olcott, Charles A., West Milford, N. J. Fluid pressure operated curb sirup separator. 2,452,207, Oct. 26.

Olson, Carl M., Oak Ridge, Tenn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of hydrolyzable titanium solutions. 2,452,390, Oct. 26.

O'Meara, James P., assignor to W. M. Sprinkman Corporation, Milwaukee, Wis. Filter. 2,452,486, Oct. 26.

Oppenheimer, Franz: *See*—
Levinson, Sidney O., and Oppenheimer.

Osborne, Sidney G., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y. Apparatus for compressing highly reactive gases. 2,452,526, Oct. 26.

Osgood, Charles F., Claremont, N. H., assignor to Joy Manufacturing Company. Cutter chain. 2,452,082, Oct. 26.

O'Sullivan, Eugene, Chislehurst, England. Scaffolding and like structures. 2,452,487, Oct. 26.

O'Sullivan, Frederick J., and W. B. du Pont, deceased, by M. A. du Pont, administratrix, assignors to The National Radiator Company, Johnstown, Pa. Heat exchanger. 2,452,391, Oct. 26.

Otis Elevator Company, assignee: *See*—
Watson, Gavin, Bruns, and Galanty.

Owens, Freeman H., New York, N. Y. Apparatus for radio tuning, volume control, wave band selection, and other purposes. 2,452,067, Oct. 26.

Pabis, Frank D., Amsterdam, N. Y. Electric burning-in knife. 2,452,259, Oct. 26.

Pacific Electric Manufacturing Corporation, assignee: *See*—
Brock, Arnold E.
Gerard, Roy H., and Smith.

Paddock, Ormond H., Rossford, and J. P. Pearse, Swanton, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Apparatus for bending glass. 2,452,488, Oct. 26.

Pallet Engineering Company, assignee: *See*—
Bryson, Newall M.

Panter, Charles M. R. D., Harlington, assignor to Shrager Bros. Limited, London, England. Adjustable chair. 2,452,140, Oct. 26.

Parker Pen Company, The: *See*—
Tefft, Ivan D.

Partridge, William A., and H. J. Alty, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Motor fuels. 2,452,489, Oct. 26.

Pasdertz, Joseph R., Joliet, Ill. Die holder. 2,452,141, Oct. 26.

Patent Button Company, The, assignee: *See*—
Zwiebel, William A.

Patterson, John A.: *See*—
Kluge, Herman D., and Patterson.

Patterson, John A., and H. D. Kluge, Beacon, assignors to The Texas Company, New York, N. Y. Rust and oxidation inhibited lubricating compositions. 2,452,319, Oct. 26.

Payne, Charles E., London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Continuously variable inductance. 2,452,490, Oct. 26.

Pearse, John P.: *See*—
Paddock, Ormond H., and Pearse.

Pecker, Anne G., assignee: *See*—
Pecker, Joseph S.

Pecker, Joseph S., assignor of one-half to A. G. Pecker, Philadelphia, Pa. Viscosity control. 2,452,142, Oct. 26.

Peebles, David D., Hillsborough, assignor to Golden State Company, Ltd., San Francisco, Calif. Heating apparatus. 2,452,260, Oct. 26.

Pellettere, Joseph A., assignor to Gulf Oil Corporation, Pittsburgh, Pa. Fluid sampling system. 2,452,143, Oct. 26.

Perfect Circle Company, The: *See*—
Teetor, Ralph R.

Perfection Steel Body Company, The, assignee: *See*—
Brick, Perry A.

Pescara, Raul P., assignee: *See*—
Huber, Robert.

Peter, Leslie H., London, England, assignor, by mesne assignments, to Westinghouse Air Brake Company, Pittsburgh, Pa. Apparatus for effecting and controlling the inflation of pneumatic tires for vehicle wheels. 2,452,527, Oct. 26.

Petersen, John H.: *See*—
Ingalls, David, and Petersen.

Peterson, Robert E., Danvers, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Sound pickup device. 2,452,068, Oct. 26.

Petree, Jay R., Fayetteville, assignor to Crouse-Hinds Company, Syracuse, N. Y. Grounding fitting. 2,452,491, Oct. 26.

Pettus, James L., Sherman Oaks, Calif., assignor to Radio Corporation of America. Light modulator mount. 2,452,322, Oct. 26.

Philbin, William A., Perrysburg, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Glass handling device. 2,452,392, Oct. 26.

Philco Corporation: *See*—
Nichol, Arthur V.
Tiley, John W.

Phillips, Dwight M., Fullerton, assignor to Chiksan Tool Company, Brea, Calif. Electrical swing joint. 2,452,144, Oct. 26.

Phillips Petroleum Company, assignee: *See*—
Drennan, Harry E.

Pierce Governor Company, assignee: *See*—
Reger, Raymond.

Pike, Ralph H., Kalispell, Mont. Telescope sight mounting. 2,452,145, Oct. 26.

Platzer, George E., Springfield, Mass., assignor to Chrysler Corporation, Highland Park, Mich. Spinning ring. 2,452,323, Oct. 26.

Plummer, Fred L., assignor to Hammond Iron Works, Warren, Pa. Tank top. 2,452,146, Oct. 26.

Proctor & Schwartz, Inc., assignee: *See*—
Bokum, William F.

Radio Corporation of America, assignee: *See*—
Crosby, Murray G.
Daley, Charles.
Leverenz, Humboldt W.
Lindenblad, Nils E.
Nergaard, Leon S.
Pettus, James L.
Sontheimer, Carl G.
Spencer, James A., Kennedy, and Thomas.

Raines, Arnold: *See* —
Everett, John L., and Raines.

Raytheon Manufacturing Company, assignee: *See*—
Anderson, Homer G.
Kather, Erich N.
Klemperer, Hans.
Krim, Norman B.
Le Van, James D.
Reed, William B.
Runkle, Lloyd D.
Smith, Charles G.
Spencer, Percy L.

Reed, William B., Westwood, assignor to Raytheon Manufacturing Company, Newton, Mass. Grid structure. 2,452,069, Oct. 26.

Reese, Michael Research Foundation, assignee: *See*—
Levinson, Sidney O., and Oppenheimer.

Reger, Raymond, assignor to Pierce Governor Company, Anderson, Ind. Velocity governor. 2,452,208, Oct. 26.

Reger, Raymond, assignor to The Pierce Governor Company, Inc., Anderson, Ind. Governor-throttle connection. 2,452,393, Oct. 26.

Rehberg, Chessie E., Glenside, and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Cellulose ether plasticized with bis(allyl lactate) maleate. 2,452,209, Oct. 26.

Reibig, Eric A.: *See*—
Wiken, Christy A., and Reibig.

Reinhold, Frank W., Beverly, and J. J. Maciejowski, Ipswich, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Training mechanisms for firearms. 2,452,147, Oct. 26.

Remington, Ralph E., administrator: *See*—
Tomlin, John R.

Remington Rand Inc., assignee: *See*—
Schutt, Friedrich J.

Research Corporation: *See*—
Milas, Nicholas A.

Rhodes, Curtis L., Ripley, W. Va. Adjustable keyhole saw. 2,452,148, Oct. 26.

Richartz, Paul, Sheffield, England. Method and apparatus for covering a scale for the handle of a pocket knife. 2,452,149, Oct. 26.

Rieber, William K.: *See*—
Leitner, Richard G., and Rieber.

Rigby, Ernest E., Penwortham, Preston, England. Inlet fitting for tanks. 2,452,394, Oct. 26.

Rivers, Walter, Coeur d'Alene, Idaho. Churn. 2,452,492, Oct. 26.

Roberts, Alfred, assignee: *See*—
Sweet, Roland G.

Roberts, James H., assignor of one-fourth to B. Ivy, Osceola, Ark. Pump packing means. 2,452,261, Oct. 26.

Roberts, Wesley J., North Little Rock, Ark. Egg carton. 2,452,150, Oct. 26.

Robertshaw-Fulton Controls Company, assignee: *See*—
Strobel, Charles K.

Robins, Bert D., New York, N. Y. Chain and lock mechanism. 2,452,151, Oct. 26.

Robinson, Charlotte R. B., assignee et al.: *See*—
Bucknell, Ernest H., and Bletcher.

Rockwell Manufacturing Company, assignee: *See*—
Wiken, Christy A., and Reibig.

Rogers, Jesse J., Duluth, Minn. Combined illuminating and radiating type heater. 2,452,210, Oct. 26.

Rohm & Haas Company, assignee: *See*—
Bruson, Herman A., and Niederhauser.

Rollason, Ernest C., Waltham Abbey, and E. H. S. van Someren, Broxbourne, England, assignors to Metal & Thermit Corporation. Silicone resins for weld coatings. 2,452,493, Oct. 26.

Ronning, Martin, St. Louis Park, and K. M. Keith, assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Harvester platform adjusting means. 2,452,153, Oct. 26.

Rooney, James H., J. H. Sharphouse, and P. R. Hawtin, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Process of forming polyvinyl formal coatings on textiles. 2,452,152, Oct. 26.

Rosan, Joseph, North Hollywood, Calif. Fluid seal for inserts. 2,452,262, Oct. 26.

Rose, Francis E., Drexel Hill, Pa. Fire escape. 2,452,324, Oct. 26.

Rosenthal, Adolph H., assignor to Scophony Corporation of America, New York, N. Y. Machine for mechanically working materials. 2,452,211, Oct. 26.

Ross, John, Ramsey, assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Bromination. 2,452,154, Oct. 26.

Rosser, Robert F., Miami, Fla. Form-securing clamp. 2,452,325, Oct. 26.

Rothen, Edward M., Bloomfield, N. J., assignor to Russell & Stoll Company, Inc., New York, N. Y. Pull point connection device. 2,452,494, Oct. 26.

Rubatex Products, Inc., assignee: *See*—
Bascom, Roger C.

Ruegg, Rudolf, assignor to Ciba Limited, Basel, Switzerland. Disazo dyestuffs. 2,452,263, Oct. 26.

Runkle, Lloyd D., Gloucester, assignor to Raytheon Manufacturing Company, Newton, Mass. Resistance welding forging pressure control. 2,452,070, Oct. 26.

Russell, Robert C., Cleveland Heights, assignor to Eaton Manufacturing Company, Cleveland, Ohio. Cooling apparatus, temperature control. 2,452,264, Oct. 26.

Russell & Stoll Company, Inc., assignee: *See*—
Rothen, Edward M.

Rust, Frederick F., and W. E. Vaughan, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Controlled oxidation of paraffinic hydrocarbons. 2,452,326, Oct. 26.

Rybicki, Walter, Garfield Heights, Ohio. Working the die hole contour of a wire drawing die. 2,452,155, Oct. 26.

Ryder, Charles D., Covington, assignor to The Grote Manufacturing Company, Bellevue, Ky. Truck reflector. 2,452,528, Oct. 26.

Sabini, Frederick, Salem, N. J. Toy submarine. 2,452,495, Oct. 26.

Sand, Robert T., assignor of forty per cent to F. T. Hicks, Detroit, Mich. Multipurpose light. 2,452,327, Oct. 26.

Satrian, Rudy A., Chattanooga, Tenn. Scalp protector. 2,452,265, Oct. 26.

Saubestre, Basil F., Elmhurst, assignor to American Can Company, New York, N. Y. Can body. 2,450,071, Oct. 26.

Schaeffer, Benjamin B.: *See*—
Ault, Waldo C., and Schaeffer.

Scharff, Fritz M., Lorain, Ohio, assignor to National Tube Company. Rolling mill roll. 2,452,266, Oct. 26.

Schatz, Karl, Peekskill, N. Y. Food cutting utensil. 2,452,328, Oct. 26.

Schatz, Sherman A., Charleston, W. Va. Explosive bullet. 2,452,072, Oct. 26.

Schelling, Clarence J., Chicago, Ill. Cutoff switch for screw feeders. 2,452,395, Oct. 26.

Schild, John A.: *See*—
Hayward, James R., Schild, and Hartup.

Schivley, George W., Buchtel, and P. W. Springer, Dayton, Ohio. Folded dipole. 2,452,073, Oct. 26.

Schmidt, Henry D.: *See*—
Morehead, John H., and Schmidt.

Schmitter, Walter P.: *See*—
Falk, Louis W., Schmitter, and Maurer.

Schneider, Hermann: *See*—
Straub, Fritz, Widmer, and Schneider.

Schneider, Paul L., and D. H. Dudderar, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Windshield wiper blade operating mechanism. 2,452,496, Oct. 26.

Schover, Donald S., Chicago, Ill., assignor to United States of America as represented by the United States Atomic Energy Commission. Float position indicator. 2,452,156, Oct. 26.

Schramm, Arthur G., Phoenix, Ariz. Elevatable bed trailer. 2,452,267, Oct. 26.

Schumann, Robert, Racine, Wis. Motor hand tool assembly. 2,452,268, Oct. 26.

Schutt, Friedrich J., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Control and indexing mechanism for document photographing machines. 2,452,497, Oct. 26.

Schwantes, Otto R., Milwaukee, Wis. Stoker controlled heating system. 2,452,329, Oct. 26.

Schwartz, Fred J., Walled Lake, assignor to General Motors Corporation, Detroit, Mich. Seam welding. 2,452,498, Oct. 26.

Scophony Corporation of America, assignee: *See*—
Rosenthal, Adolph H.

Scovill Manufacturing Company, assignee: *See*—
Williams, Selden T.

Sears, Raymond W., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated. Electron discharge apparatus. 2,452,157, Oct. 26.

Seeman Bros., Inc., assignee: *See*—
Bell, Morris.

Senfleben, Paul W., Malden, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe form. 2,452,158, Oct. 26.

Sepavich, Victor F.: *See*—
Kronoff, Clarence R., and Sepavich.

Shanley, Edward S., Grand Island, and H. O. Kauffmann, Eggertsville, assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Peroxide-glycerol explosive. 2,452,074, Oct. 26.

Sharphouse, John H.: *See*—
Rooney, James H., Sharphouse, and Hawtin.

Shell Development Company, assignee: *See*—
Rust, Frederick F., and Vaughan.

Shideler, Elbert M.: *See*—
Bloxom, Harvey L., and Shideler.

Shimmon, William L., Modesto, Calif. Vineyard plow. 2,452,212, Oct. 26.

Shippee, Carl C.: *See*—
Shippee, Winsor and C. C.

Shippee, Winsor, Fair Haven, N. J. Fastener. 2,452,331, Oct. 26.

Shippee, Winsor and C. C., Fair Haven, N. J. Fastener. 2,452,330, Oct. 26.

Shopmaker, Leopold, Kansas City, Kans. Grip attachment for violin bows. 2,452,396, Oct. 26.

Shotton, John C., Lakewood, Ohio. Smoking pipe. 2,452,397, Oct. 26.

Schrager Bros., Limited, assignee: *See*—
Panter, Charles M. R. D.

Siezen, Gerrit J., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., trustee. Amplifying circuit arrangement. 2,452,499, Oct. 26.

Signet, Ltd., assignee: *See*—
Allen, La Bron R. and J. H., and Kabitsch.

Sinclair Refining Company: *See*—
Teter, John W.

Singer Manufacturing Company, The, assignee: *See*—
Ackerman, James E.

Siptrott, Paul, New York, N. Y. Nail holding tool. 2,452,332, Oct. 26.

Skelly Oil Company, assignee: *See*—
Wong, Soon Y.

Skinner, Hazel B., assignee, et al.: *See*—
Bucknell, Ernest H., and Bletcher.

Small, Giltner S., Sacramento, Calif. Spectacles with readily removable lenses. 2,452,159, Oct. 26.

Smith, Adolph, New Orleans, La. Grinding wheel dresser. 2,452,398, Oct. 26.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Velocity modulation electron discharge tube. 2,452,075, Oct. 26.

Smith, Norman J., Medfield, assignor to Fenwal Incorporated, Ashland, Mass. Pressure switch. 2,452,500, Oct. 26.

Smith, Roman L., Los Angeles, Calif. Shiftable bed rail table. 2,452,160, Oct. 26.

Smith, Roy H.: *See*—
Gerard, Roy H., and Smith.

Snoek, Jacob L., Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., trustee. Magnet core. 2,452,529, Oct. 26.

Snoek, Jacob L., Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee. Magnetic core. 2,452,530, Oct. 26.

Snoek, Jacob L., Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee. Manufacturing a magnetic material and magnetic core. 2,452,531, Oct. 26.

Soll, Samuel: *See*—
Jones, Grinnell, Juda, and Soll.

Sonthelmer, Carl G., Riverside, Conn., assignor to Radio Corporation of America. Wave generating system. 2,452,213, Oct. 26.

Spencer, James A., Teaneck, N. J., and C. L. Kennedy, Patchogue, and L. A. Thomas, Brooklyn, N. Y., assignors to Radio Corporation of America. Telegraphic code transmitter. 2,452,333, Oct. 26.

Spencer, Myron C., Ocean Grove, N. J. Gun mount. 2,452,076, Oct. 26.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electric discharge device. 2,452,077, Oct. 26.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Thermally tunable electron discharge device. 2,452,078, Oct. 26.

Sperry Corporation, The, assignee: *See*—
Hansen, William W., and Varian.
Kellogg, Spencer, 2nd.

Sprague, Theodore, IV, assignor to A. J. Higgins, New Orleans, La. Rudder assembly. 2,452,334, Oct. 26.

Springer, Paul W.: *See*—
Schivley, George W., and Springer.

Sprinkman, W. M., Corporation, assignee: *See*—
O'Meara, James P.

Squires, Harold B., Los Angeles, Calif. Parking guide. 2,452,161, Oct. 26.

Stacy, Leland J., Caldwell, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Relay. 2,452,079, Oct. 26.

Stadler, John, Montreal, Quebec, Canada. Stock agitating and circulating attachment for stock tanks used in pulp and paper mills. 2,452,399, Oct. 26.

Stahl, William F.: *See*—
Collins, Fred V.

Staley, Allen C.: *See*—
Herreshoff, Alexander G., and Staley.

Standard-Knapp Corporation, assignee: *See*—
Holstebroe, Kaye B., and Wimmer.

Standard Railway Equipment Manufacturing Company, assignee: *See*—
Cisco, Edward S.
Swann, James S.
Thompson, Alfred L.

Stanton, Robert J., Brooklyn, and C. Lowry, assignors to Induction Heating Corp., New York, N. Y. Induction heating coil. 2,452,162, Oct. 26.

Stephenson, Wilbur T., assignor to The Dow Chemical Company, Midland, Mich. Continuously extruding vinylidene chloride polymer tubes and stretching the same. 2,452,080, Oct. 26.

Stevens, Adolph K., Buffalo, N. Y. Hairpin holder. 2,452,400, Oct. 26.

Stewart, Carlton D., et al.: *See*—
Hines, Claude M., and Stewart.

Stine, Donald G., Mount Carmel, Pa. Explosive projectile. 2,452,269, Oct. 26.

Stivin, Jiff. Rychnov, Czechoslovakia. Regeneration of electron discharge devices. 2,452,401, Oct. 26.

Stok-A-Fire Company, Inc.: *See*—
Graham, Roy F.

Stoner, George H., Seattle, Wash., assignor to Boeing Airplane Company. Two-axis rate gyro. 2,452,335, Oct. 26.

Straub, Fritz, Kaiseraugst, W. Widmer, Bottmingen, and H. Schneider, Riehen, Switzerland, assignors to Ciba Limited. Metallizable monoazo dyes. 2,452,171, Oct. 26.

Stringe, Jack W., Oak Park, Ill. Trimming apparatus. 2,452,402, Oct. 26.

Strobel, Charles K., Pittsburgh, Pa., assignor to Robertshaw-Fulton Controls Company. Safety control and ignition system for fuel burners. 2,452,336, Oct. 26.

Strutt, Maximilliaan J. O., and A. van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit arrangement for the amplification, frequency-transformation, or production of ultra high frequency oscillations. 2,452,337, Oct. 26.

Stuart, Clarence C., assignor to Traffic Transport Engineering, Inc., Dearborn, Mich. Trailer. 2,452,270. Oct. 26.

Stukart, Hendrik, assignor to U. S. Slicing Machine Company, La Porte, Ind. Switch control mechanism for meat tendering apparatus. 2,452,403, Oct. 26.

Submarine Signal Company, assignee: *See*—
Peterson, Robert E.
Turner, Edwin E., Jr.

Sullinger, Francis E., Claremont, N. H., assignor to Joy Manufacturing Company. Cutter chain. 2,462,081, Oct. 26.

Sun Oil Company, assignee: *See*—
Hetzel, Stanford J., and Kennedy.
Kennedy, Robert M., and Hetzel.

Supervision, Incorporated, assignee: *See*—
Doble, George N., Jr.

Swann, James S., Homewood, assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Drop endgate for railway cars. 2,452,163, Oct. 26.

Swanson, Albert J., Oak Lawn, and J. R. Gardner, Bellwood, Ill. Garage door operation. 2,452,501, Oct. 26.

Sweet, Roland G., Pleasanton, assignor to A. Roberts, Concord, Calif. Leather vise. 2,452,271, Oct. 26.

Sylvania Electric Products, Inc., assignee: *See*—
Burns, Laurence.
Metten, Herbert.

Tarbox, John P., Philadelphia, Pa. Shoe construction. 2,452,502, Oct. 26.

Taylor, Frank: *See*—
Dawes, Robert T., and Taylor.

Teetor, Ralph R., assignor to The Perfect Circle Company, Hagerstown, Ind. Piston ring. 2,452,503, Oct. 26.

Tefft, Ivan D., assignor to The Parker Pen Company, Janesville, Wis. Writing instrument. 2,452,504, Oct. 26.

Te Grotenhuis, Theodore A., Olmsted Falls, Ohio. Reinforcing organic-polysulfide rubbery material with carbon black. 2,452,083, Oct. 26.

Tennessee Valley Authority, assignee: *See*—
Elmore, Kelly L.

Teter, John W., Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Dehydrogenating saturated nitriles to unsaturated nitriles. 2,452,505, Oct. 26.

Texas Company, The, assignee: *See*—
Grahame, James H.
Kluge, Herman D., and Patterson.
Patterson, John A., and Kluge.
Vermillion, Herbert E.

Thomas, Lewis A.: *See*—
Spencer, James A., Kennedy, and Thomas.

Thompson, Alfred L., Munster, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill. Refrigerant container construction for railway refrigerator cars. 2,452,164, Oct. 26.

Thompson, Alonzo Z., Selma, N. C. Logging cart. 2,452,338, Oct. 26.
Thompson Products, Inc.: *See*—
Booth, James H.
Thomson, John B., assignee: *See*—
Ferger, Hulbert K.
Tiley, John W., assignor to Philco Corporation, Philadelphia, Pa. Magnetron. 2,452,272, Oct. 26.
Titeflex, Inc., assignee: *See*—
Ingalls, David, and Petersen.
Tomlin, John R., Arlington, Va.; R. E. Remington, administrator of said J. R. Tomlin, deceased. Drop-testing device. 2,452,084, Oct. 26.
Traffic Transport Engineering, Inc., assignee: *See*—
Stuart, Clarence C.
Tri-State Engineering Company: *See*—
Colt, Burton C., Jr.
Tritton, Suzanne M. L., Loughton, England. Food preparations. 2,452,506, Oct. 26.
Turkat, Meyer, Flushing, assignor to Atlas Consolidated Corporation, New York, N. Y. Snap-action fluorescent light switch. 2,452,507, Oct. 26.
Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Interchange of electrical and acoustical energy. 2,452,085, Oct. 26.
Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Sound producer and receiver. 2,452,086, Oct. 26.
Tyrer, Daniel, Stockton-on-Tees, England. Manufacture of phenols or salts thereof. 2,452,404, Oct. 26.
Uhlig, William F., Newburgh, N. Y. Apparatus for printing and drying of textile fabrics. 2,452,339, Oct. 26.
Ulanet, Herman, Newark, N. J. Snap action thermal limit switch. 2,452,508, Oct. 26.
United Aircraft Corporation, assignee: *See*—
Zimmerman, Charles H.
United Shoe Machinery Corporation, assignee: *See*—
Johnson, Charles E.
Reinhold, Frank W., and Maciejowski.
Senfleben, Paul W.
United States Atomic Energy Commission, United States of America, as represented by the, assignee: *See*—
Newton, Amos S.
Schover, Donald S.
U. S. Slicing Machine Company: *See*—
Stukart, Hendrik.
Unruh, Cornelius C., and W. O. Kenyon, assignors to Eastman Kodak Company, Rochester, N. Y. Heteropolymer of isopropenyl acetate and maleic anhydride. 2,452,165, Oct. 26.
Van der Heem, Jan, The Hague, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Radio receiver circuit arrangement. 2,452,340, Oct. 26.
Van der Ziel, Albert: *See*—
Strutt, Maximiliaan J. O., and van der Ziel.
Van Sant, Robert H., Alexandria, Va. Applicator. 2,452,273, Oct. 26.
Van Someren, Ernest H. S.: *See*—
Rollason, Ernest C., and van Someren.
Varian, Russell H.: *See*—
Hansen, William W., and Varian.
Vaughan, William E.: *See*—
Rust, Frederick F., and Vaughan.
Vaughn, Raymond E.: *See*—
Gravenhorst, Everett, and Vaughn.
Vermillion, Herbert E., Fishkill, assignor to The Texas Company, New York, N. Y. Alkylation of isobutane with ethylene. 2,452,166, Oct. 26.
Victor Metal Products Corporation, assignee: *See*—
Derham, Philip A.
Victory, Frederick C., West Haven, and J. R. Moore, Bridgeport, Conn., assignors to Moore Special Tool Co., Inc. Wheel truing device. 2,452,509, Oct. 26.
Vincent-McCall Company, The: *See*—
Vincent, William W., Jr.
Vincent, William W., Jr., assignor to The Vincent-McCall Company, Kenosha, Wis. Chaise longue. 2,452,405, Oct. 26.
Vogel, Oliver G., and F. E. Kirk, Oak Park, Ill., assignors to Hotpoint Inc. Clamp-on electric heater for water tanks and the like. 2,452,214, Oct. 26.
Volkery, Bernhard, and J. Kosiowski, Shrub Oak, N. Y. Two-part, screw-connected clamp. 2,452,406, Oct. 26.
Wade, Charles B.: *See*—
Gray, Griffin W., and Wade.
Wadleck, Joseph P.: *See*—
Munschauer, Frederick E., and Wadleck.
Wagner, Roy W., Fairbury, Nebr. Pump jack. 2,452,087, Oct. 26.
Walner, Eugene, Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. High dielectric material. 2,452,532, Oct. 26.
Wainwright, George R., Glendale, assignor, by mesne assignments, to W. H. Maxwell, Los Angeles, Calif. Rotary hook. 2,452,167, Oct. 26.
Walker, Earl C., Altadena, Calif. Filter. 2,452,407, Oct. 26.
Wallenberg, Victor H., Stockholm, Sweden. Sub-caliber assembly for firearms. 2,452,510, Oct. 26.
Walters, Thomas A., assignor to American Blower Corporation, Detroit, Mich. Fan having auxiliary cutoff. 2,452,274, Oct. 26.
War, the United States of American as represented by the Secretary of, assignee: *See*—
Fox, Benjamin.
Woodberry, David L., Howerton, and Dunbar.
Warner Electric Brake Manufacturing Company, assignee: *See*—
Born, Frank G.
Warren, Doyle, Monrovia, assignor to Chiksan Tool Company, Brea, Calif. Swivel type coaxial connector. 2,452,168, Oct. 26.
Warren Featherbone Co., The, assignee: *See*—
Kraft, Marie J., and Durey.
Warrick, Earl L.: *See*—
McGregor, Rob R., and Warrick.
Warsher, Adolph, Maywood, assignor to M. M. Bilofsky, Newark, N. J. Heat responsive switch. 2,452,511, Oct. 26.
Washbond, Harry H., assignor to The Baker Manufacturing Company, Springfield, Ill. Gradebuilder blade mounting. 2,452,408, Oct. 26.
Wasserman, David, New York, N. Y. Game. 2,452,341, Oct. 26.
Watson, Gavin, Ossining, and W. H. Bruns, Lincolndale, N. Y., and H. E. Galamty, Hillside, N. J., assignors to Otis Elevator Company, New York, N. Y. Elevator control system. 2,452,342, Oct. 26.
Weaver, Edgar R.: *See*—
Kemmner, Paul H., and Weaver.
Wells, Robert, Kankakee, Ill. Folding picnic table. 2,452,169, Oct. 26.
Wells, Roy E., assignor to Art Metal Construction Company, Jamestown, N. Y. Filing cabinet. 2,452,512, Oct. 26.
Wells, Sidney D., Combined Locks, assignor to The Institute of Paper Chemistry, Appleton, Wis. Preparation of paper-making fiber and other useful materials from straw. 2,452,533, Oct. 26.
Wenger, Clifton E., Detroit, Mich. Air heater for motor vehicles. 2,452,170, Oct. 26.
Westinghouse Air Brake Company, The, assignee: *See*—
Bent, Arthur J.
Hines, Claude M., and Stewart.
Peter, Leslie H.
Westinghouse Electric Corporation, assignee: *See*—
Edwards, Andrew W.
Leeds, Winthrop M.
Whitehead, Willard J., assignor to Woodward Governor Company, Rockford, Ill. Governor control for prime movers. 2,452,088, Oct. 26.
Wickman, Wiley W., Los Angeles, Calif. Rotary abrading device. 2,452,409, Oct. 26.
Widin, Edgar F., assignee: *See*—
Garros, Michael.
Widmer, Willy: *See*—
Straub, Fritz, Widmer, and Schneider.
Wiegel, Otto, Chicago, Ill. Drill rod rack. 2,452,410, Oct. 26.
Wiken, Christy A., and E. A. Reibig, Milwaukee, Wis., assignors, by mesne assignments, to Rockwell Manufacturing Company, Pittsburgh, Pa. Universal work head. 2,452,089, Oct. 26.
Willard, Herbert B., Port Arthur, Tex., assignor to Gulf Oil Corporation, Pittsburgh, Pa. Method for catalytic cracking of hydrocarbon oils. 2,452,172, Oct. 26.
Williams, Selden T., Bellerose, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn. Valve for insecticide sprays. 2,452,215, Oct. 26.
Wilson, George S., Haworth, N. J. Garment hanger. 2,452,513, Oct. 26.
Wilson, Tom, Baltimore, Md., assignor to Bethlehem Steel Company. Apparatus for hot sawing. 2,452,343, Oct. 26.
Wimmer, Ludwig: *See*—
Holstebroe, Kaye B., and Wimmer.
Wong, Soon Y., Pawhuska, assignor to Skelly Oil Company, Tulsa, Okla. Concentrating and refining formaldehyde solutions by distillation with hydrocarbons. 2,452,412, Oct. 26.
Wong, Soon Y., Pawhuska, assignor to Skelly Oil Company, Tulsa, Okla. Concentrating and refining formaldehyde solutions by distillation with halogenated hydrocarbons. 2,452,413, Oct. 26.
Wong, Soon Y., Pawhuska, assignor to Skelly Oil Company, Tulsa, Okla. Concentrating and refining formaldehyde solutions by distillation with oxygenated hydrocarbon derivatives. 2,452,414, Oct. 26.
Wong, Soon Y., Pawhuska, assignor to Skelly Oil Company, Tulsa, Okla. Concentrating and refining formaldehyde solutions by distillation with hydrocarbon derivatives containing nitrogen and oxygen. 2,452,415, Oct. 26.
Wood, Louvan E., Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind. Coding apparatus. 2,452,090, Oct. 26.
Woodberry, David L., U. S. Army, W. W. Howerton, Bel Air, Md., and A. Dunbar, Teaneck, N. J., assignors to the Secretary of War of the United States of America, as trustee. Incendiary material. 2,452,091, Oct. 26.
Woodling, George V., Cleveland, Ohio. Tube fitting coupling. 2,452,275, Oct. 26.
Woodling, George V., Cleveland, Ohio. Tube fitting device. 2,452,276, Oct. 26.

Woodling, George V., Cleveland, Ohio. Tube coupling. 2,452,277, Oct. 26.
Woodling, George V., Cleveland, Ohio. Tube coupling device. 2,452,278, Oct. 26.
Woodward Governor Company, assignee: *See*—
Whitehead, Willard J.
Woolery, Horace E., St. Paul; M. L. Woolery, executrix of said H. E. Woolery, deceased, assignor to Woolery Machine Company, Minneapolis, Minn. Weed burner. 2,452,411, Oct. 26.
Woolery Machine Company, assignee: *See*—
Woolery, Horace E.
Woolery, Myra L., executrix: *See*—
Woolery, Horace E.
Worthington Pump and Machinery Corporation: *See*—
Hahn, Clarence J.
Wright, James G. E., Alplaus, N. Y., assignor to General Electric Company. Making dimethyl silicone products. 2,452,416, Oct. 26.
Yarber, Gordon W., Seattle, Wash. Drafting table. 2,452,216, Oct. 26.
Young, Charles W., Cuyahoga Falls, Ohio. Holder for fishing poles. 2,452,279, Oct. 26.
Zahller, Virgil, assignor to I. J. Fickel, Belle Center, Ohio. Shock absorbing seat structure for tractors. 2,452,280, Oct. 26.
Zaremba Company, assignee: *See*—
Hughes, Burton S.
Zentis, William A., Chicago, Ill., assignor to Libby-Owens-Ford Glass Company, Toledo, Ohio. Method and apparatus for use in designing solar houses. 2,452,417, Oct. 26.
Zimmerman, Charles H., Nichols, assignor to United Aircraft Corporation, East Hartford, Conn. Aircraft propulsion means. 2,452,281, Oct. 26.
Zuckerman, Roscoe C., Stockton, Calif. Beet digger. 2,452,418, Oct. 26.
Zwiebel, William A., assignor to The Patent Button Company, Waterbury, Conn. Plastic button. 2,452,173, Oct. 26.
Zychlinski, Lech W. S., Narberth, Pa. Paper clip. 2,452,514, Oct. 26.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 26TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Core for yarn or thread packages and making the same. J. E. A. Blanchet. Re. 23,046, Oct. 26.

Electric heater. G. C. Wicks. Re. 23,047, Oct. 26.

LIST OF PLANT INVENTIONS

Rose plant. R. L. Byrum. 809, Oct. 26.

LIST OF DESIGN INVENTIONS

Apron. M. J. Kraft. 151,518, Oct. 26.
Ash tray. R. W. Raine and G. T. Derby. 151,557, Oct. 26.
Awning or the like. W. C. Allison. 151,484, Oct. 26.
Belt. D. M. Scott and E. Steinberg. 151,560, Oct. 26.
Bottle. L. J. Colwell. 151,507, Oct. 26.
Bottle, Perfume. J. K. Lielio. 151,520, Oct. 26.
Bracelet or similar article. A. Philippe. 151,537, Oct. 26.
Bracelet or similar article. A. Philippe. 151,542, Oct. 26.
Bracelet or similar article. A. Philippe. 151,546, Oct. 26.
Bracelet or similar article. A. Philippe. 151,550, Oct. 26.
Brooch and watch, Combined. O. Pennino. 151,529, Oct. 26.
Brooch or similar article. M. Boucher. 151,490–8, Oct. 26.
Brooch or similar article. M. Boucher. 151,500–5, Oct. 26.
Brooch or similar article. A. Philippe. 151,538, Oct. 26.
Brooch or similar article. A. Philippe. 151,544–5, Oct. 26.
Brooch or similar article. A. Philippe. 151,548, Oct. 26.
Brooch or similar article. A. Philippe. 151,551–5, Oct. 26.
Brush, Palate plate. R. F. Taylor. 151,570, Oct. 26.
Building. H. W. Sachs. 151,559, Oct. 26.
Calculating machine. A. B. Machado. 151,521, Oct. 26.
Casing, Electric drier. E. S. Hewitt. 151,515, Oct. 26.
Casing, Remote controller. L. Martling, Jr. 151,522, Oct. 26.
Casing, Space heater. C. G. Bjorncrantz. 151,487–8, Oct. 26.
Chopper, Food. F. P. Hess and H. A. Wormeck. 151,514, Oct. 26.
Coat, Fur. J. Weckstein. 151,573, Oct. 26.
Collar or similar article, Bead. J. Harber. 151,512, Oct. 26.
Dice game device. E. E. Southwell. 151,562, Oct. 26.
Dress. J. F. Strassner 151,563, Oct. 26.
Dress. J. F. Strassner. 151,565–6, Oct. 26.
Dress. J. F. Strassner. 151,568, Oct. 26.
Dress ensemble. J. F. Strassner. 151,564, Oct. 26.
Dress ensemble. J. F. Strassner. 151,567, Oct. 26.
Earring or similar article. A. Katz. 151,516–17, Oct. 26.
Earring or similar article. A. Philippe. 151,531–4, Oct. 26.
Earring or similar article. A. Philippe. 151,539, Oct. 26.
Earring or similar article. A. Philippe. 151,543, Oct. 26.
Earring or similar article. A. Philippe. 151,547, Oct. 26.
Fireplace screen and fender, Combined. H. C. Packard. 151,525, Oct. 26.
Game board. W. G. Batchelder. 151,486, Oct. 26.
Handbag. L. E. Meadow. 151,523–4, Oct. 26.
Handle, Toothbrush. W. F. Alderson. 151,483, Oct. 26.
Holder, Combined cigar, cigarette, and match. F. J. Hayman. 151,513, Oct. 26.
Holder, Match book. J. H. Sutton. 151,569, Oct. 26.
Jewelry component. B. Patek. 151,528, Oct. 26.
Knocker, Door. J. F. Williams. 151,574, Oct. 26.
Lamp. M. Aronek. 151,485, Oct. 26.
Lamp. A. Sommerville. 151,561, Oct. 26.
Lawn sweeper. E. D. Parker. 151,526–7, Oct. 26.
Link chain for a bracelet or similar article, Expansible. E. E. Fachon. 151,509–10, Oct. 26.
Luminaire. F. C. Winkler and B. A. Wyman. 151,575–7, Oct. 26.
Necklace or similar article. M. Boucher. 151,499, Oct. 26.
Necklace or similar article. A. Philippe. 151,530, Oct. 26.
Necklace or similar article. A. Philippe. 151,535–6, Oct. 26.
Necklace or similar article. A. Philippe. 151,540–1, Oct. 26.
Pin clip or similar article. A. Philippe. 151,549, Oct. 26.
Pipe attachment, Smoking. L. W. Russi. 151,558, Oct. 26.
Pitcher or similar article, Cream. N. E. Graven. 151,511, Oct. 26.
Plug for electric outlets, Dummy. G. H. Tillinghast. 151,571, Oct. 26.
Rack or similar article, Tie. H. A. Tomarin. 151,572, Oct. 26.
Rack, Sewing. J. V. Dente. 151,508, Oct. 26.
Savings bank. A. Quackenbush. 151,556, Oct. 26.
Shoe sole. H. Laybolt. 151,519, Oct. 26.
Socket and control switch, Combined bracket lamp. C. F. Bookman, Jr., and Z. H. Jammé. 151,489, Oct. 26.
Suit. S. Cohen. 151,506, Oct. 26.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 26TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Actuator, Fluid pressure controlled. A. J. Bent. 2,452,176, Oct. 26.
Addition products from acrylic esters. H. A. Bruson and W. D. Niederhauser. 2,452,029, Oct. 26.
Adjustable chair. C. M. R. D. Panter. 2,452,140, Oct. 26.
Adjustable support. C. E. Morley. 2,452,316, Oct. 26.
Adjusting means, Harvester platform. M. Ronning and K. M. Keith. 2,452,153, Oct. 26.
Air heater for motor vehicles. C. E. Wenger. 2,452,170, Oct. 26.
Airplane propeller, Adjustable pitch. O. C. Enerud. 2,452,444, Oct. 26.
Alkyl esters of chloroacetic acid, Preparing. W. P. Bitler, T. C. Aschner, and L. Nicholl. 2,452,350, Oct. 26.
Alkylation of isobutane with ethylene. H. E. Vermillion. 2,452,166, Oct. 26.
Antenna, Directive radio. H. I. Becker. 2,452,349, Oct. 26.
Apparatus and process for testing materials. P. W. Gumaer. 2,452,122, Oct. 26.
Apparatus for bending glass. O. H. Paddock and J. P. Pearse. 2,452,488, Oct. 26.
Apparatus for compressing highly reactive gases. S. G. Osborne. 2,452,526, Oct. 26.
Apparatus for hot sawing. T. Wilson. 2,452,343, Oct. 26.
Apparatus for molding rubber and plastic materials. E. S. Long. 2,452,382, Oct. 26.
Apparatus for printing and drying of textile fabrics. W. F. Uhlig. 2,452,339, Oct. 26.
Apparatus for radio tuning, volume control, wave band selection, and other purposes. F. H. Owens. 2,452,067, Oct. 26.
Apparatus for simulating wind effects in aviation ground trainers. C. J. Crane. 2,452,039, Oct. 26.
Apparatus for treating flowable solids. J. L. Erisman. 2,452,362, Oct. 26.
Applicator. R. H. Van Sant. 2,452,273, Oct. 26.
Arresting gear. F. E. Flader. 2,452,447, Oct. 26.
Ash receptacle and draft controlling door for domestic water heaters, stoves, and the like, Combined. D. G. Burkert. 2,452,180, Oct. 26.
Assembly for firearms, Sub-caliber. V. H. Wallenberg. 2,452,510, Oct. 26.
Attachment for stock tanks used in pulp and paper mills, Stock agitating and circulating. J. Stadler. 2,452,399, Oct. 26.
Attachment for violin bows, Grip. L. Shopmaker. 2,452,396, Oct. 26.
Automobile radio remote control. E. F. McDonald, Jr. 2,452,384, Oct. 26.
Axle and fifth wheel assembly for farm wagons. Fred Joe and F. J. De Long. 2,452,358, Oct. 26.
Balanced wave filter. F. S. Farkas. 2,452,114, Oct. 26.
Bearing: *See*—
  Self-aligning bearing.
  Sliding antifriction bearing.
Bed heater. J. C. Gerdes. 2,452,234, Oct. 26.
Bed trailer, Elevatable. A. G. Schramm. 2,452,267, Oct. 26.
Belt, Sanitary garter. I. Kaldor. 2,452,129, Oct. 26.
Billfold and card retainer, Combined. M. F. Bertalotto. 2,452,096, Oct. 26.
Binder for sewing machines, Strip reversing. J. E. Ackerman. 2,452,419, Oct. 26.
Blackboard. L. J. Gold. 2,452,235, Oct. 26.
Block: *See*—
  Building block.
Body tipping apparatus for motor vehicles. P. A. Brick. 2,452,516, Oct. 26.
Bolt puller. G. W. Gray and C. B. Wade. 2,452,457, Oct. 26.
Book support for chairs, Detachable. W. T. Clawson. 2,452,183, Oct. 26.
Bowling score indicator. T. R. Blando. 2,452,288, Oct. 26.
Box: *See*—
  Rotary lock box.
Bracket: *See*—
  Concrete form waler bracket.
Braiding machine carrier. A. T. Lochner. 2,452,250, Oct. 26.
Braiding machine for endless belts or the like. J. M. Martí. 2,452,136, Oct. 26.
Brake control, Tractor trailer. F. G. Born. 2,452,033, Oct. 26.
Brake linings, Injection of. C. H. Beare. 2,452,284, Oct. 26.
Brassière. C. Anselmo. 2,452,345, Oct. 26.
Bridge ramp. N. M. Bryson. 2,452,289, Oct. 26.
Bromination. J. Ross. 2,452,154, Oct. 26.
Building block. D. H. Herbert. 2,452,463, Oct. 26.
Bullet, Explosive. S. A. Schatz. 2,452,072, Oct. 26.
Burial dress support. G. T. Brownson. 2,452,353, Oct. 26.
Burner: *See*—
  Weed burner.
Burning-in knife, Electric. F. D. Pabis. 2,452,259, Oct. 26.
Button, Plastic. W. A. Zwiebel. 2,452,173, Oct. 26.
Cabinet: *See*—
  Filing cabinet.
Cabinet having automatically shiftable mirror. J. H. Hirshbergh. 2,452,375, Oct. 26.
Cable reel. C. J. Hudson. 2,452,378, Oct. 26.
Cable tensiometer. H. Hitchen. 2,452,302, Oct. 26.
Calcium aluminate sinter, Making. K. L. Elmore. 2,452,041, Oct. 26.
Cam mechanism. J. R. Harkness. 2,452,372, Oct. 26.
Can body. B. F. Saubestre. 2,452,071, Oct. 26.
Cap: *See*—
  Chimney cap.
Card file and posting table, Revolving. J. D. Catron. 2,452,291, Oct. 26.
Carrier: *See*—
  Braiding machine carrier.
Cart, Logging. A. Z. Thompson. 2,452,338, Oct. 26.
Catalytic cracking of hydrocarbon oils. H. B. Willard. 2,452,172, Oct. 26.
Cathead, Automatic. O. M. Gahagan. 2,452,451, Oct. 26.
Cathode, High emission. B. Fox. 2,452,044, Oct. 26.
Cellulose ether plasticized with bis(allyl) lactate) maleate. C. E. Rehberg and C. H. Fisher. 2,452,209, Oct. 26.
Centrifugal separator. B. S. Hughes. 2,452,465, Oct. 26.
Chain: *See*—
  Cutter chain.
  Pintle chain.
Chain and lock mechanism. B. D. Robins. 2,452,151, Oct. 26.
Chair: *See*—
  Adjustable chair.
Chaise longue. W. W. Vincent, Jr. 2,452,405, Oct. 26.
Chemical conversion of salt containing solutions. A. L. Bunting. 2,452,179, Oct. 26.
Chimney cap. J. A. Hurt. 2,452,240, Oct. 26.
Churn. W. Rivers. 2,452,492, Oct. 26.
Circuit: *See*—
  Electrical ratio meter circuit.
  Low direct current regulating circuit.
  Receiver muting circuit.
  Telephone circuit.
Circuit arrangement, Amplifying. G. J. Siezen. 2,452,499, Oct. 26.
Circuit arrangement for the amplification, frequency-transformation or production of ultra high frequency oscillations. M. J. O. Strutt and A. van der Ziel. 2,452,337, Oct. 26.
Circuit arrangement, Radio receiver. J. van der Heem. 2,452,340, Oct. 26.
Circuit breaker, Automatic reclosing. A. W. Edwards. 2,452,442, Oct. 26.
Circuit breaker, Fluid blast arc extinguishing. A. E. Brock. 2,452,221, Oct. 26.
Circuit interrupter. W. M. Leeds. 2,452,476–7, Oct. 26.
Clamp: *See*—
  Dial test indicator clamp.
  Form-securing clamp.
  Hose clamp.
  Two-part, screw-connected clamp.
Clamp structure, Saddle. O. L. Fluharty. 2,452,186, Oct. 26.
Cleaner: *See*—
  Venetian blind cleaner.
Cleaning device, Drain trap. W. C. Gangloff. 2,452,367, Oct. 26.
Clip: *See*—
  Paper clip.
Clothesline device. S. Kronhaus. 2,452,246, Oct. 26.
Clutch: *See*—
  Speed responsive clutch.
Coding apparatus. L. E. Wood. 2,452,090, Oct. 26.
Coil cables having reversingly coiled portions, Production of vulcanizable elastic. R. D. Collins and W. J. Drigot. 2,452,431, Oct. 26.
Coil cables with a longitudinal end, Method and apparatus for making elastic. R. D. Collins. 2,452,433, Oct. 26.
Coil structures with longitudinal ends, Apparatus for making elastic. W. J. Crehan and R. J. Arnold. 2,452,434, Oct. 26.
Coil structures with uncoiled ends, Making elastic. R. D. Collins. 2,452,432, Oct. 26.

Coils with connecting tails, Apparatus for producing elastic. R. J. Arnold, W. D. MacDonald, and R. D. Collins. 2,452,435, Oct. 26.
Color comparison apparatus. F. G. Merckel. 2,452,385, Oct. 26.
Combined illuminating and radiating type heater. J. J. Rogers. 2,452,210, Oct. 26.
Compressor. W. V. Fischer. 2,452,232, Oct. 26.
Concentrating and refining formaldehyde solutions by distillation with hydrocarbon derivatives containing nitrogen and oxygen. S. Y. Wong. 2,452,415, Oct. 26.
Concentrating and refining formaldehyde solutions by distillation with halogenated hydrocarbons. S. Y. Wong. 2,452,413, Oct. 26.
Concentrating and refining formaldehyde solutions by distillation with hydrocarbons. S. Y. Wong. 2,452,412, Oct. 26.
Concentrating and refining formaldehyde solutions by distillation with oxygenated hydrocarbon derivatives. S. Y. Wong. 2,452,414, Oct. 26.
Concrete expansion joint. J. N. Heltzel. 2,452,462, Oct. 26.
Concrete form waler bracket. V. J. Luppino. 2,452,203, Oct. 26.
Condenser. W. F. Bokum. 2,452,427, Oct. 26.
Connecting device, Piston rod. E. P. Larsh. 2,452,247, Oct. 26.
Connection device, Pull point. E. M. Rothen. 2,452,494, Oct. 26.
Connection, Governor-throttle. R. Reger. 2,452,393, Oct. 26.
Connector: *See*—
  Electrical connector.
  Swivel type coaxial connector.
Connector. D. E. Cole. 2,452,184, Oct. 26.
Contour of a wire drawing die, Working the die hole. W. Rybicki. 2,452,155, Oct. 26.
Control and ignition system for fuel burners, Safety. C. K. Strobel. 2,452,336, Oct. 26.
Control for motor-driven apparatus. J. M. Newman. 2,452,257, Oct. 26.
Control for prime movers, Governor. W. J. Whitehead. 2,452,088, Oct. 26.
Control mechanism for meat tendering apparatus, Switch. H. Stukart. 2,452,403, Oct. 26.
Control system. O. C. Frederick. 2,452,365, Oct. 26.
Control system, Elevator. G. Watson, W. H. Bruns, and H. E. Galanty. 2,452,342, Oct. 26.
Conversion apparatus, Frequency. W. W. Hansen and R. H. Varian. 2,452,048, Oct. 26.
Conversion apparatus, Hydraulic torque. D. L. Butow. 2,452,290, Oct. 26.
Conveyer bucket, Self-tipping. G. H. Johnson. 2,452,243, Oct. 26.
Cooling apparatus, temperature control. R. C. Russell. 2,452,264, Oct. 26.
Cosmetic device. R. E. Kruck. 2,452,131, Oct. 26.
Coupling: *See*—
  Flexible leakproof coupling.
  Quick disconnect coupling.
  Tube coupling.
  Tube fitting coupling.
Coupling device, Tube. G. V. Woodling. 2,452,278, Oct. 26.
Covering a scale for the handle of a pocket knife, Method and apparatus for. P. Richartz. 2,452,149, Oct. 26.
Crate for water bottles or acid carboys. C. E. Johnson. 2,452,195, Oct. 26.
Cutter chain. C. F. Osgood. 2,452,082, Oct. 26.
Cutter chain. F. E. Sullinger. 2,452,081, Oct. 26.
Cutting board with crumb tray, Bread. A. H. Ericsson. 2,452,445, Oct. 26.
Cylinder ridge reamer. H. A. Berkman. 2,452,095, Oct. 26.
Cylinder, Self-bleeding hydraulic. E. Gravenhorst and R. E. Vaughn. 2,452,369, Oct. 26.
Dehydrator. J. C. Lowe. 2,452,134, Oct. 26.
Dehydrogenating saturated nitriles to unsaturated nitriles. J. W. Teter. 2,452,505, Oct. 26.
Deposition of indium and bath therefor, Electrolytic. J. R. Dyer, Jr. 2,452,361, Oct. 26.
Designing solar houses, Method and apparatus for use in. W. A. Zentis. 2,452,417, Oct. 26.
Detector for railway car wheels, Defect. J. J. Mason. 2,452,480, Oct. 26.
Device for automatically inserting marking strips in piles of sheets. L. Namenyi-Katz. 2,452,138, Oct. 26.
Device for facilitating stoker installations. R. F. Graham. 2,452,454, Oct. 26.
Device for the joining of tubes. K. L. Bergvall and E. E. Dahlberg. 2,452,219, Oct. 26.
Dial test indicator clamp. M. E. Hester. 2,452,301, Oct. 26.
Diamond tool and making the same. G. W. Lucas. 2,452,478, Oct. 26.
Die holder. J. R. Pasdertz. 2,452,141, Oct. 26.
Digger, Beet. R. C. Zuckerman. 2,452,418, Oct. 26.
Dimethyl silicone products, Making. J. G. E. Wright. 2,452,416, Oct. 26.
Dipole, Folded. G. W. Schivley and P. W. Springer. 2,452,073, Oct. 26.
Discharge apparatus, Electron. R. W. Sears. 2,452,157, Oct. 26.
Discharge device, Electric. P. L. Spencer. 2,452,077, Oct. 26.
Discharge device, Electrical. E. N. Kather. 2,452,056, Oct. 26.
Discharge device employing cavity resonators, Electron. L. S. Nergaard. 2,452,317, Oct. 26.
Discharge device of the magnetron type, Electron. H. G. Anderson. 2,452,032, Oct. 26.
Discharge device, Thermally tunable electron. P. L. Spencer. 2,452,078, Oct. 26.
Discharge device utilizing cavity resonators, Electron. L. S. Nergaard. 2,452,318, Oct. 26.
Disk, Detonator. H. Liber and D. R. Beeman. 2,450,063, Oct. 26.
Dispenser: *See*—
  Tape dispenser.
Distributing device. J. P. Johnson. 2,452,470, Oct. 26.
Distributor apparatus, Radio-frequency. N. E. Lindenblad. 2,452,202, Oct. 26.
Door latch. A. J. Harris. 2,452,461, Oct. 26.
Door operating mechanism for powder hoists. G. A. Chadwick and P. H. Girouard. 2,452,035, Oct. 26.
Drafting table. G. W. Yarber. 2,452,216, Oct. 26.
Drier for granular plastic. R. R. Leiske. 2,452,249, Oct. 26.
Drill rod rack. O. Wiegel. 2,452,410, Oct. 26.
Drop-testing device. J. R. Tomlin. 2,452,084, Oct. 26.
Dyes, Metallizable monoazo. F. Straub, W. Widmer, and H. Schneider. 2,452,171, Oct. 26.
Dyestuffs, Disazo. R. Ruegg. 2,452,263, Oct. 26.
Egg carton. W. J. Roberts. 2,452,150, Oct. 26.
Electric switch. D. E. Moran and S. F. Jarvis. 2,452,065, Oct. 26.
Electrical connector. C. L. Basham. 2,452,422, Oct. 26.
Electrical discharge tube. J. D. Le Van. 2,452,062, Oct. 26.
Electrical ratio meter circuit. K. J. Knudsen. 2,452,244, Oct. 26.
Electrical swing joint. D. M. Phillips. 2,452,144, Oct. 26.
Electromagnetic system. A. V. Nichol. 2,452,388, Oct. 26.
Electron discharge devices, Regeneration of. J. Stivin. 2,452,401, Oct. 26.
Electronic high-voltage regulator. G. W. Cook. 2,452,037, Oct. 26.
Ellipsograph. K. B. Noble. 2,452,484, Oct. 26.
Endgate for railway cars, Drop. J. S. Swann. 2,452,163, Oct. 26.
Ethers of vitamin A. N. A. Milas. 2,452,386, Oct. 26.
Fabric: *See*—
  Pile fabric.
Fan having auxiliary cutoff. T. A. Walters. 2,452,274, Oct. 26.
Fastener. W. Shippee. 2,452,331, Oct. 26.
Fastener. W. and C. C. Shippee. 2,452,330, Oct. 26.
Fastening device. E. C. Crowther. 2,452,437, Oct. 26.
Faucet. G. S. Elliott. 2,452,295, Oct. 26.
Faucet valve element. E. H. Bucknell and R. E. Bletcher. 2,452,354, Oct. 26.
Filing cabint. R. E. Wells. 2,452,512, Oct. 26.
Film developing apparatus, Self-contained portable. N. W. O'Clair. 2,452,389, Oct. 26.
Filter: *See*—
  Balanced wave filter.
Filter. J. P. O'Meara. 2,452,486, Oct. 26.
Filter. E. C. Walker. 2,452,407, Oct. 26.
Fire escape. F. E. Rose. 2,452,324, Oct. 26.
Fire extinguisher, Portable. H. C. Leech and T. A. Henshaw. 2,452,309, Oct. 26.
Fire extinguishing method. W. A. Beach. 2,452,348, Oct. 26.
Fire extinguishing waste paper receptacle. D. A. Florence. 2,452,118, Oct. 26.
Fire-retardant composition, Amylaceous. G. Jones, W. Juda, and S. Soll. 2,452,055, Oct. 26.
Fire-retardant composition and process. G. Jones, W. Juda, and S. Soll. 2,452,054, Oct. 26.
Fitting for tanks, Inlet. E. E. Rigby. 2,452,394, Oct. 26.
Fitting, Grounding. J. R. Petree. 2,452,491, Oct. 26.
Flanged joint. H. P. Dahlstrand. 2,452,227, Oct. 26.
Flexible hose, Construction of. C. M. Hamblin. 2,452,047, Oct. 26.
Flexible leakproof coupling. J. W. Kehoe. 2,452,057, Oct. 26.
Float position indicator. D. S. Schover. 2,452,156, Oct. 26.
Floating mine. M. L. Ilfeld. 2,452,053, Oct. 26.
Flowerpot holder. H. Herzog. 2,452,236, Oct. 26.
Fluid handling mechanism. J. Muller. 2,452,256, Oct. 26.
Fluid pressure operated curb sirup separator. C. A. Olcott. 2,452,207, Oct. 26.
Fluid pump. T. Elleman and K. M. Cloud. 2,452,185, Oct. 26.
Fluid seal for inserts. J. Rosan. 2,452,262, Oct. 26.
Folder. G. N. Doble, Jr. 2,452,231, Oct. 26.
Folding picnic table. R. Wells. 2,452,169, Oct. 26.
Food preparations. S. M. L. Tritton. 2,452,506, Oct. 26.
Foot section for articulated beds, Patient adjustable. R. R. Freund. 2,452,366, Oct. 26.
Forming and changing the cross section of convoluted metal tubing. D. Ingalls and J. H. Petersen. 2,452,125, Oct. 26.
Form-securing clamp. R. F. Rosser. 2,452,325, Oct. 26.
Fountain, Drinking. E. B. Johnson. 2,452,305, Oct. 26.

Fuels, Motor. W. A. Partridge and H. J. Alty. 2,452,489, Oct. 26.
Fungicidal compositions. P. J. Carlisle and W. S. Hinegardner. 2,452,429, Oct. 26.
Game. D. Wasserman. 2,452,341, Oct. 26.
Garage door operation. A. J. Swanson and J. R. Gardner. 2,452,501, Oct. 26.
Garment hanger. J. F. Appleman. 2,452,346, Oct. 26.
Garment hanger. G. S. Wilson. 2,452,513, Oct. 26.
Gas diffusion device for storage batteries. H. P. Murphy. 2,452,066, Oct. 26.
Gas sampling apparatus. J. D. Collett, Jr. 2,452,224, Oct. 26.
Gear: *See*—
  Arresting gear.
Gear shaving machine. L. W. Falk, W. P. Schmitter, and G. P. Maurer. 2,452,520, Oct. 26.
Generator: *See*—
  Torsional oscillation generator.
Geophysical explorations, Making. L. F. Athy. 2,452,515, Oct. 26.
Glass handling device. W. A. Philbin. 2,452,392, Oct. 26.
Governor, Velocity. R. Reger. 2,452,208, Oct. 26.
Grade builder blade mounting. H. H. Washbond. 2,452,408, Oct. 26.
Grapple. W. R. Girnus. 2,452,452, Oct. 26.
Grid for Geiger-Mueller tubes, Protective. H. Metten. 2,452,524, Oct. 26.
Grid structure. W. B. Reed. 2,452,069, Oct. 26.
Grinding machines, Arrangement in. K. W. J. Hjelmblad. 2,452,123, Oct. 26.
Grinding wheel dresser. A. Smith. 2,452,398, Oct. 26.
Guide, Parking. H. B. Squires. 2,452,161, Oct. 26.
Gun mount. M. C. Spencer. 2,452,076, Oct. 26.
Gun, Soldering. F. Dunham. 2,452,360, Oct. 26.
Gyro, Two-axis rate. G. H. Stoner. 2,452,335, Oct. 26.
Gyroscopic flight instrument. S. Kellogg, 2nd. 2,452,473, Oct. 26.
Hair curler. T. C. Grant. 2,452,456, Oct. 26.
Hair curling device. P. T. Coloccia. 2,452,225, Oct. 26.
Hairpin holder. A. K. Stevens. 2,452,400, Oct. 26.
Hamburger apportioning, forming, and wrapping machine. K. E. Bemis. 2,452,218, Oct. 26.
Hand tool assembly, Motor. R. Schumann. 2,452,268, Oct. 26.
Handle assembly, Pessary and manipulating. G. L. De Bray and A. Morgan. 2,452,229, Oct. 26.
Hanger: *See*—
  Garment hanger.
Hanger. H. D. Gorne. 2,452,120, Oct. 26.
Head for golf clubs. N. S. Campbell. 2,452,100, Oct. 26.
Headrest. J. A. and R. J. Conradt. 2,452,103, Oct. 26.
Heat exchanger. F. J. O'Sullivan and W. B. du Pont. 2,452,391, Oct. 26.
Heat responsive switch. A. Warsher. 2,452,511, Oct. 26.
Heater: *See*—
  Bed heater.
  Combined illuminating and radiating type heater.
Heater for cooking containers, Combustion tube. R. T. Keating. 2,452,472, Oct. 26.
Heater for water tanks and the like, Clamp-on electric. O. G. Vogel and F. E. Kirk. 2,452,214, Oct. 26.
Heating apparatus. D. D. Peebles. 2,452,260, Oct. 26.
Heating coil, Induction. R. J. Stanton and C. Lowry. 2,452,162, Oct. 26.
Heating system, Stoker controlled. O. R. Schwantes. 2,452,329, Oct. 26.
Heteropolymer of isopropenyl acetate and maleic anhydride. C. C. Unruh and W. O. Kenyon. 2,452,165, Oct. 26.
High dielectric material. E. Wainer. 2,452,532, Oct. 26.
Hinge for refrigerator cars, Drip pan. E. S. Cisco. 2,452,101, Oct. 26.
Holder for evaporators, Wick. M. Bell. 2,452,424, Oct. 26.
Holder for fishing poles. C. W. Young. 2,452,279, Oct. 26.
Holder for sheet material. E. C. Blaske. 2,452,426, Oct. 26.
Holder: *See*—
  Die holder.
  Flowerpot holder.
  Hairpin holder.
  Welding electrode holder.
Holder of quartz oscillator plates, Multiple. H. L. Bloxom and E. M. Shideler. 2,452,351, Oct. 26.
Holding device. G. F. Felton. 2,452,116, Oct. 26.
Hook: *See*—
  Rotary hook.
Hose clamp. A. A. Kollman. 2,452,245, Oct. 26.
Hub structure. C. J. Hahn. 2,452,458, Oct. 26.
Hydraulic jack. J. J. Mueller. 2,452,482, Oct. 26.
Hydrolyzable titanium solutions, Preparation of. C. M. Olson. 2,452,390, Oct. 26.
Identification tags to seals, Securing. E. Brooks. 2,452,098, Oct. 26.
Incendiary material. D. L. Woodberry, W. W. Howerton, and A. Dunbar. 2,452,091, Oct. 26.
Incinerator, Household. H. B. Bornside. 2,452,097, Oct. 26.
Indicating device for welding systems, Ignition. H. Klemperer. 2,452,060, Oct. 26.
Indicating device, Vehicle speed. P. Addorisio. 2,452,344, Oct. 26.
Indicator: *See*—
  Bowling score indicator.
  Float position indicator.
  Pressure indicator.
Inductance, Continuously variable. C. E. Payne. 2,452,490, Oct. 26.
Induction furnace for variable heat patterns. T. R. Kennedy. 2,452,197, Oct. 26.
Inflation of pneumatic tires for vehicle wheels, Apparatus for effecting and controlling. L. H. Peter. 2,452,527, Oct. 26.
Insert for changing the compression ratio of internal-combustion engines. R. Hollingsworth. 2,452,238, Oct. 26.
Instrument lighting. J. B. Dickson. 2,452,294, Oct. 26.
Interchange of electrical and acoustical energy, The. E. E. Turner, Jr. 2,452,085, Oct. 26.
Jack: *See*—
  Hydraulic jack.
  Pump jack.
Joint: *See*—
  Concrete expansion joint.
  Electrical swing joint.
  Flanged joint.
Key control, Musical. J. A. Koehl. 2,452,307, Oct. 26.
Keyhole saw, Adjustable. C. L. Rhodes. 2,452,148, Oct. 26.
Knee joint for prostheses. O. I. Fahlström. 2,452,446, Oct. 26.
Knee structure for artificial legs. J. E. Hanger, III. 2,452,459, Oct. 26.
Ladder attachment. T. E. Graham. 2,452,455, Oct. 26.
Laminated product and manufacture. C. N. Cone. 2,452,226, Oct. 26.
Lamp: *See*—
  Nonactinic fluorescent lamp.
Landing gear fairing, Retractable. E. L. Martin. 2,452,251, Oct. 26.
Latch: *See*—
  Door latch.
  Window latch.
Light: *See*—
  Multipurpose light.
Lighting fixture, Fluorescent. M. Murino. 2,452,137, Oct. 26.
Line securing device. S. L. Atkins. 2,452,175, Oct. 26.
Line tightener. C. Gobel. 2,452,368, Oct. 26.
Liquid polymeric dimethyl silicones. R. R. McGregor and E. Leathen. 2,452,254, Oct. 26.
Liquids, Sterilizing. S. O. Levinson and F. Oppenheimer. 2,452,201, Oct. 26.
Lock nut. R. T. Hosking. 2,452,192, Oct. 26.
Locking device for truck and trailer doors. W. A. Johnson and E. E. Moore. 2,452,521, Oct. 26.
Locking means for rotary actuating bars of door fasteners. G. E. Dath. 2,452,109, Oct. 26.
Low direct current voltage regulating circuit. H. J. Lindenhovius. 2,452,381, Oct. 26.
Lubricating compositions, Oxidation-inhibited. H. D. Kluge and J. A. Patterson. 2,452,320, Oct. 26.
Lubricating compositions, Rust and oxidation inhibited. J. A. Patterson and H. D. Kluge. 2,452,319, Oct. 26.
Lubrication failure detector switch. W. J. Kasparek. 2,452,379, Oct. 26.
Luminescent screen. H. W. Leverenz. 2,452,523, Oct. 26.
Machine for continuous pressing operations, Rotary pressing. A. Newhouse. 2,452,483, Oct. 26.
Machine for feeding, bending, and flattening tubing, Combined. J. R. Hayward, J. A. Schild, and W. O. Hartup. 2,452,050, Oct. 26.
Machine for mechanically working materials. A. H. Rosenthal. 2,452,211, Oct. 26.
Magnet core. J. L. Snoek. 2,452,529, Oct. 26.
Magnetic core. J. L. Snoek. 2,452,530, Oct. 26.
Magnetic material and magnetic core, Manufacturing. J. L. Snoek. 2,452,531, Oct. 26.
Magnetic separator. W. L. Bower. 2,452,220, Oct. 26.
Magnetron. J. W. Tiley. 2,452,272, Oct. 26.
Master sheets in typewriting and like machines, Producing reduplicative. C. W. Brumhill. 2,452,099, Oct. 26.
Measuring implement. F. H. Jantzen. 2,452,241, Oct. 26.
Mechanism for document photographing machines, Control and indexing. F. J. Schutt. 2,452,497, Oct. 26.
Mercaptans, Solvent extraction of. H. E. Drennan. 2,452,040, Oct. 26.
Metal for metal-to-glass seals, Preparing. C. Daley. 2,452,519, Oct. 26.
Methylenedioxyphenyl compound as insecticide and pyrethrin synergist. O. F. Hedenburg. 2,452,188, Oct. 26.
Mill roll, Rolling. F. M. Scharff. 2,452,266, Oct. 26.
Mine apparatus, Electrical. A. L. Lee. 2,452,248, Oct. 26.
Modulator, Diode. E. H. Lange. 2,452,132, Oct. 26.
Mop holder with dual tape tensioning structure. G. E. Bodimer 2,452,177, Oct. 26.
Mortar applying device. J. H. Herman, Jr. 2,452,464, Oct. 26.
Motor control apparatus, Electric. D. L. Markusen. 2,452,311, Oct. 26.

Motor speed synchronizing balancing device, Multiple. R. L. Mayrath. 2,452,064, Oct. 26.
Mount for warehouse trucks, Hydraulic reel. J. H. Morehead and H. D. Schmidt. 2,452,481, Oct. 26.
Mount, Light modulator. J. L. Pettus. 2,452,322, Oct. 26.
Mounting: *See*—
  Gradebuilder blade mounting.
  Telescope sight mounting.
Mounting for inverted incandescent mantles. C. W. Davis. 2,452,438, Oct. 26.
Multipurpose light. R. T. Sand. 2,452,327, Oct. 26.
Nail holding tool. P. Siptrott. 2,452,332, Oct. 26.
Needle, Phonograph. W. H. Hutter. 2,452,304, Oct. 26.
Nickel content of steel, Determining. F. B. Clardy. 2,452,036, Oct. 26.
Nitriles, Synthesis of. W. F. Gresham. 2,452,187, Oct. 26.
Nonactinic fluorescent lamp. L. Burns. 2,452,518, Oct. 26.
Olefins, Polymerization of. S. J. Hetzel and R. M. Kennedy. 2,452,190, Oct. 26.
Olefins, Polymerization of. R. M. Kennedy and S. J. Hetzel. 2,452,198, Oct. 26.
1-cyanobutadiene-1,3 from acetic acid by azeotropic distillation, Separation of. V. L. Hansley. 2,452,460, Oct. 26.
Optical device, Novelty. F. E. Flotron. 2,452,363, Oct. 26.
Organic-polysulfide rubbery material with carbon black, Reinforcing. T. A. Te Grotenhuis. 2,452,083, Oct. 26.
Package and filling device for batteries or hollow bodies, Combined. V. D. Hauck. 2,452,049, Oct. 26.
Packaging. F. B. Arnold. 2,452,174, Oct. 26.
Packing machine, Bottle. K. B. Holstebroe and L. Wimmer. 2,452,376, Oct. 26.
Pallet of the load-supporting type, with casters. B. C. Colt, Jr. 2,452,356, Oct. 26.
Paper clip. L. W. S. Zychlinski. 2,452,514, Oct. 26.
Paper-making fiber and other useful materials from straw, Preparation of. S. D. Wells. 2,452,533, Oct. 26.
Paper pulp machine. J. C. Lowe. 2,452,135, Oct. 26.
Parachute shroud and making it, Elastic. R. T. Dawes and F. Taylor. 2,452,228, Oct. 26.
Paraffinic hydrocarbons, Controlled oxidation of. F. F. Rust and W. E. Vaughan. 2,452,326, Oct. 26.
Patch, Tension. P. H. Kemmer and E. R. Weaver. 2,452,058, Oct. 26.
Permanent fault isolator time delay switch. R. H. Gerard and R. M. Smith. 2,452,233, Oct. 26.
Peroxide-glycerol explosive. E. S. Shanley and H. O. Kauffmann. 2,452,074, Oct. 26.
Phenol-aldehyde molding compositions. J. Allan. 2,452,420, Oct. 26.
Phenols or salts thereof, Manufacture of. D. Tyrer. 2,452,404, Oct. 26.
Phonographic apparatus. R. G. Leitner and W. K. Rieber. 2,452,133, Oct. 26.
Pickup device, Sound. R. E. Peterson. 2,452,068, Oct. 26.
Pile fabric. D. M. Cooper. 2,452,104, Oct. 26.
Pintle chain. C. K. Johnson. 2,452,242, Oct. 26.
Pipe: *See*—
  Smoking pipe.
Piston engine compressed air accumulator, variable volume, Free. R. Huber. 2,452,193, Oct. 26.
Piston machine, Free. R. Huber. 2,452,194, Oct. 26.
Piston ring. R. R. Teetor. 2,452,503, Oct. 26.
Plastic containers, Manufacture of. F. V. Collins. 2,452,357, Oct. 26.
Plating palladium and plating bath therefor. G. C. Lambros. 2,452,308, Oct. 26.
Plow, Vineyard. W. L. Shimmon. 2,452,212, Oct. 26.
Plowshare. E. R. Mossak. 2,452,387, Oct. 26.
Polyvinyl formal coatings on textiles, Forming. J. H. Rooney, J. H. Sharphouse, and P. R. Hawtin. 2,452,152, Oct. 26.
Porous material, Treatment of. H. M. Kvalnes and F. S. Chance. 2,452,200, Oct. 26.
Posting apparatus, Record. C. W. Kinzer. 2,452,059, Oct. 26.
Power actuated garment and like presses. C. E. Feasey. 2,452,115, Oct. 26.
Power belt retaining device. F. D. Jones and L. G. Cheatum. 2,452,306, Oct. 26.
Pressure control, Resistance welding forging. L. D. Runkle. 2,452,070, Oct. 26.
Pressure indicator. W. V. Eslinger and W. N. Barton. 2,452,296, Oct. 26.
Pressure intensifier. W. P. Cousino. 2,452,292, Oct. 26.
Pressure switch. N. J. Smith. 2,462,500, Oct. 26.
Producing optical elements from commercial plate glass, Method and apparatus for. I. G. Fowler and D. W. Dunipace. 2,452,364, Oct. 26.
Projectile, Explosive. D. G. Stine. 2,452,269, Oct. 26.
Prolamine-base protein composition, Plasticized. W. L. Morgan and C. R. Faelten. 2,452,313, Oct. 26.
Prolamine-base protein compositions, Plasticized. W. L. Morgan. 2,452,314, Oct. 26.
Prolamine-base protein compositions, Plasticized. W. L. Morgan and C. R. Faelten. 2,452,315, Oct. 26.
Propulsion means, Aircraft. C. H. Zimmerman. 2,452,281, Oct. 26.
Protector: *See*—
  Scalp protector.
Puller: *See*—
  Bolt puller.
Pump: *See*—
  Fluid pump.
  Reciprocating abutment fluid pump.
  Rotary vane pump.
  Slidable abutment rotary pump.
Pump jack. R. W. Wagner. 2,452,087, Oct. 26.
Pump packing means. J. H. Roberts. 2,452,261, Oct. 26.
Pumping unit, Vacuum return. C. F. Ames. 2,452,421, Oct. 26.
Purification of hard waxes by removal of soft fatty components. R. T. Balch. 2,452,093, Oct. 26.
Quick disconnect coupling. D. M. Clark and G. A. Hallenbeck. 2,452,430, Oct. 26.
Rack: *See*—
  Drill rod rack.
Radio antenna. G. H. Cotchefer. 2,452,106, Oct. 26.
Radio compass trainer control, Photoelectric. C. J. Crane. 2,452,038, Oct. 26.
Raincoat or cape, Convertible. M. J. Kraft and M. Durey. 2,452,475, Oct. 26.
Ramp, Bridge. N. M. Bryson. 2,452,222, Oct. 26.
Receiver muting circuit. M. G. Crosby. 2,452,436, Oct. 26.
Receptacle: *See*—
  Fire extinguishing waste paper receptacle.
Reciprocating abutment fluid pump. J. P. Johnson. 2,452,468, Oct. 26.
Recorder system, Job time. A. L. Denniston and S. H. Martin. 2,452,359, Oct. 26.
Reel: *See*—
  Cable reel.
Refrigerant container construction for railway refrigerator cars. A. L. Thompson. 2,452,164, Oct. 26.
Refrigerating system defrosted by hot liquid refrigerants. J. B. Cocanour. 2,452,102, Oct. 26.
Registering flat bed color printing elements with their fixed registry elements. E. L. Harley. 2,452,373, Oct. 26.
Regulator: *See*—
  Electronic high-voltage regulator.
  Vehicle window regulator.
Relay. L. J. Stacy. 2,452,079, Oct. 26.
Relay system. R. E. Hersey. 2,452,051, Oct. 26.
Resins and method for their production, Anacardic-acrolein. M. T. Harvey. 2,452,374, Oct. 26.
Resins for weld coatings, Silicone. E. C. Rollason and E. H. S. van Someren. 2,452,493, Oct. 26.
Responsive device, Selectively. F. H. Hibbard. 2,452,052, Oct. 26.
Reversing mechanism for looms. C. R. Kronoff and V. F. Sepavich. 2,452,380, Oct. 26.
Ring: *See*—
  Piston ring.
  Spinning ring.
Roadbeds, Stabilizing. W. J. Kelley. 2,452,196, Oct. 26.
Rotary abrading device. W. W. Wickman. 2,452,409, Oct. 26.
Rotary hook. G. R. Wainwright. 2,452,167, Oct. 26.
Rotary lock box. P. A. Derham. 2,452,230, Oct. 26.
Rotary vane pump. G. A. Jones. 2,452,471, Oct. 26.
Rubber-like product and preparation. W. C. Ault and B. B. Schaeffer. 2,452,092, Oct. 26.
Rudder assembly. T. Sprague, IV. 2,452,334, Oct. 26.
Rust preventive composition. H. D. Kluge and J. A. Patterson. 2,452,321, Oct. 26.
Safety wheels for use on automobiles and trucks, Auxiliary. G. J. Dourte. 2,452,110, Oct. 26.
Sampling system, Fluid. J. A. Pellettere. 2,452,143, Oct. 26.
Sanding machine. H. S. Newton. 2,452,205–6, Oct. 26.
Sanitary napkin holding means. E. Carpenter. 2,452,181, Oct. 26.
Scaffolding and like structures. E. O'Sullivan. 2,452,487, Oct. 26.
Scale, Hydraulic. V. J. and F. G. Huston. 2,452,124, Oct. 26.
Scalp protector. R. A. Satrian. 2,452,265, Oct. 26.
Screen: *See*—
  Luminescent screen.
Screen and developing light, Luminescent. H. W. Leverenz. 2,452,522, Oct. 26.
Seal. J. P. Johnson. 2,452,469, Oct. 26.
Sealer. F. N. Irwin, Jr. 2,452,126, Oct. 26.
Sealing and carrying device. W. Obernauer. 2,452,485, Oct. 26.
Sealing device, Floating. D. F. McGill. 2,452,253, Oct. 26.
Sealing tip for well casings. R. Jaswell. 2,452,466, Oct. 26.
Seam opening device. R. H. McMurray. 2,452,312, Oct. 26.
Seam welding. F. J. Schwartz. 2,452,498, Oct. 26.
Seat attachment for barbers' chairs, Child's. A. N. Masabny. 2,452,252, Oct. 26.
Seat structure for tractors, Shock absorbing. V. Zahller. 2,452,280, Oct. 26.
Self-aligning bearing. J. H. Booth. 2,452,352, Oct. 26.

Separator: *See*—
  Centrifugal separator.
  Fluid pressure operated curb sirup separator.
  Magnetic separator.
Serving tool. H. L. Kitselman. 2,452,474, Oct. 26.
Setting machine, Hot cap. P. A. Bezzerides. 2,452,287, Oct. 26.
Sharpener, Razor blade. G. E. Bergman. 2,452,094, Oct. 26.
Shear. F. E. Munschauer and J. P. Wadleck. 2,452,525, Oct. 26.
Shiftable bed rail table. R. L. Smith. 2,452,160, Oct. 26.

Shoe form. P. W. Sendleben. 2,452,158, Oct. 26.
Shoe stretching mechanism, Positive and lock lateral. F. De Curtis. 2,452,440, Oct. 26.
Signal device, Electrical drop. W. H. Campbell. 2,452,034, Oct. 26.
Signal trainer. R. K. Forsyth. 2,452,449, Oct. 26.
Slidable abutment rotary pump. J. P. Johnson. 2,452,467, Oct. 26.
Sliding antifriction bearing. H. K. Ferger. 2,452,117, Oct. 26.
Smoking pipe. J. C. Shotton. 2,452,397, Oct. 26.
Snap-action fluorescent light switch. M. Turkat. 2,452,507, Oct. 26.
Snap action thermal limit switch. H. Ulanet. 2,452,508, Oct. 26.
Sound producer and receiver. E. E. Turner, Jr. 2,452,086, Oct. 26.
Spacing table. L. C. Beatty. 2,452,285, Oct. 26.
Spectacles with readily removable lenses. G. S. Small. 2,452,159, Oct. 26.
Speed differential detecting apparatus. C. M. Hines and C. D. Stewart. 2,452,191, Oct. 26.
Speed responsive clutch. F. O. Eaton. 2,452,111, Oct. 26.
Spinning high tenacity viscose rayon. G. M. A. Kayser. 2,452,130, Oct. 26.
Spinning ring. G. E. Platzer. 2,452,323, Oct. 26.
Splitting machine. C. E. Johnson. 2,452,128, Oct. 26.
Spool adapter for rope layers or stranding machines. M. McKosky. 2,452,255, Oct. 26.
Spool or bobbin. G. B. Markle, Jr. 2,452,383, Oct. 26.
Spring band. A. Benjamin. 2,452,286, Oct. 26.
Stand for flatirons, Supporting. H. C. Davis. 2,452,439, Oct. 26.
Starter. G. C. Goode. 2,452,298, Oct. 26.
Starter control system, Counterelectromotive force motor. K. D. James. 2,452,127, Oct. 26.
Starter, Explosion-proof. W. F. Eckert. 2,452,112, Oct. 26.
Starting and lighting device, Heater. J. G. Lindsay. 2,452,310, Oct. 26.
Step-up mechanism. E. H. Hughes. 2,452,030, Oct. 26.
Stoker provided with a metering control to determine fuel and air feed. R. F. Graham. 2,452,453, Oct. 26.
Stopping mechanism for textile apparatus. G. H. Cady and E. W. Adams. 2,452,223, Oct. 26.
Structure for high packing handled baskets with fruit, Method and packing. J. A. McCormick. 2,452,204, Oct. 26.
Sulfosuccinamic acid, Derivatives of. L. H. Flett. 2,452,043, Oct. 26.
Supercharger. A. G. Herreshoff and A. C. Staley. 2,452,300, Oct. 26.
Support: *See*—
  Adjustable support.
  Burial dress support.
Switch: *See*—
  Electric switch.
  Heat responsive switch.
  Lubrication failure detector switch.
  Permanent fault isolator time delay switch.
  Pressure switch.
  Snap-action fluorescent light switch.
  Snap action thermal light switch.
Switch. G. H. Berkholder. 2,452,425, Oct. 26.
Switch for high-frequency electrical oscillations. D. C. Espley. 2,452,113, Oct. 26.
Switch for screw feeders, Cutoff. C. J. Schelling. 2,452,395, Oct. 26.
Swivel type coaxial connector. D. Warren. 2,452,168, Oct. 26.
Synthetic hydrocarbons containing oxygenated compounds of hydrocarbons of high octane value, Conversion of. J. H. Grahame. 2,452,121, Oct. 26.
Tab reminder device. L. R. and J. H. Allen, and R. L. Kabitsch. 2,452,217, Oct. 26.
Table: *See*—
  Drafting table.
  Folding picnic table.
  Shiftable bed rail table.
  Spacing table.
Tank top. F. L. Plummer. 2,452,146, Oct. 26.
Tape dispenser. H. C. Gould. 2,452,299, Oct. 26.
Telephone circuit. H. M. Huge. 2,452,239, Oct. 26.
Telescope sight mounting. R. H. Pike. 2,452,145, Oct. 26.
Television system, Color. L. de Forest. 2,452,293, Oct. 26.
Temperature control system, Bearing. R. P. and J. R. Garrison. 2,452,046, Oct. 26.
Therapeutic device. C. H. Fredenburg. 2,452,450, Oct. 26.
Toilet, Ventilated. W. F. Auer. 2,452,282, Oct. 26.
Tool: *See*—
  Nail holding tool.
  Serving tool.
Tool for removing wire insulation. A. P. Bass. 2,452,423, Oct. 26.
Torch machine, Universal. R. F. Helmkamp. 2,452,189, Oct. 26.
Torque control for helicopters. J. N. Candler. 2,452,355, Oct. 26.
Torsional oscillation generator. R. B. Allnutt and R. T. McGoldrick. 2,452,031, Oct. 26.
Toy submarine. F. Sabini. 2,452,495, Oct. 26.
Trailer. C. C. Stuart. 2,452,270, Oct. 26.
Training mechanisms for firearms. F. W. Reinhold and J. J. Maciejowski. 2,452,147, Oct. 26.
Transmission system, Power. D. T. Brownlee. 2,452,178, Oct. 26.
Transmitter for self-synchronous systems. J. L. Everett. 2,452,042, Oct. 26.
Transmitter, Telegraphic code. J. A. Spencer, C. L. Kennedy, and L. A. Thomas. 2,452,333, Oct. 26.
Trimming apparatus. J. W. Stringe. 2,452,402, Oct. 26.
Trough, Watering. M. A. and F. Hoburg. 2,452,237, Oct. 26.
Truck, Hand. A. Nielsen. 2,452,258, Oct. 26.
Truck reflector. C. D. Ryder. 2,452,528, Oct. 26.
Tube: *See*—
  Electrical discharge tube.
  Velocity modulation electron discharge tube.
Tube coupling. G. V. Woodling. 2,452,277, Oct. 26.
Tube fitting coupling. G. V. Woodling. 2,452,275, Oct. 26.
Tube fitting device. G. V. Woodling. 2,452,276, Oct. 26.
Tube structure, Thermionic. N. B. Krim. 2,452,061, Oct. 26.
Turret tuner, Sequential. J. O. Elsea. 2,452,443, Oct. 26.
Two-part, screw-connected clamp. B. Volkery and J. Koslowski. 2,452,406, Oct. 26.
Undergarment. F. N. Mason. 2,452,479, Oct. 26.
Uranium deuteride, Preparing. A. S. Newton. 2,452,139, Oct. 26.
Utensil, Food cutting. K. Schatz. 2,452,328, Oct. 26.
Valve catcher. T. M. Ball. 2,452,283, Oct. 26.
Valve for insecticide sprays. S. T. Williams. 2,452,215, Oct. 26.
Valve having a capillary tube expansion passage, Regulator. J. E. Dube. 2,452,441, Oct. 26.
Valve stem drive, Flexible. C. W. Bryant. 2,452,428, Oct. 26.
Vehicle window regulator. B. S. Floraday. 2,452,448, Oct. 26.
Velocity modulation electron discharge tube. C. G. Smith. 2,452,075, Oct. 26.
Venetian blind cleaner. B. Cranney. 2,452,107, Oct. 26.
Vinylidene chloride polymer tubes and stretching the same, Continuously extruding. W. T. Stephenson. 2,452,080, Oct. 26.
Viscosity control. J. S. Pecker. 2,452,142, Oct. 26.
Vise, Leather. R. C. Sweet. 2,452,271, Oct. 26.
Vulcanization. R. C. Bascom. 2,452,347, Oct. 26.
Waste iron sulfate solution recovery. H. E. Broughton. 2,452,517, Oct. 26.
Wave generating system. C. G. Sontheimer. 2,452,213, Oct. 26.
Weed burner. H. E. Woolery. 2,452,411, Oct. 26.
Welding electrode holder. J. L. King. 2,452,199, Oct. 26.
Welding pressure roll assembly for electric weld tube mills, Multiple. C. J. Honen. 2,452,303, Oct. 26.
Wheel truing device. F. C. Victory and J. R. Moore. 2,452,509, Oct. 26.
Winch and the like. F. Gaye. 2,452,297, Oct. 26.
Window frame and sash. M. Garros. 2,452,119, Oct. 26.
Window latch. G. A. Houseman. 2,452,377, Oct. 26.
Windshield wiper blade operating mechanism. P. L. Schneider and D. H. Dudderar. 2,452,496, Oct. 26.
Work head, Universal. C. A. Wiken and E. A. Reibig. 2,452,089, Oct. 26.
Writing arm for collapsible chairs. W. T. Clawson. 2,452,182, Oct. 26.
Writing instrument. I. D. Tefft. 2,452,504, Oct. 26.
X-ray apparatus and method for crystal analysis. H. Friedman. 2,452,045, Oct. 26.
Yarn-advancing reel. A. E. Guenther. 2,452,370, Oct. 26.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 26, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

U. S. GOVERNMENT PRINTING OFFICE: 1948

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE KINNEY ET AL.

No. 5477. Decided June 14, 1948

[— F.2d —; 78 USPQ 150]

1. WORDS AND PHRASES—MUTUALLY RECIPROCATING.
Held that the expression "mutually reciprocating," in the light of appellants' specification, must be construed to require a regular movement of the elements relatively to each other, and that it should not be so broadly construed as to cover two elements which are reciprocated at different rates of speed.

2. PATENTABILITY—HOMOGENIZER.
Certain claims to a homogenizer comprising spaced compressor elements and means for mutually reciprocating said elements *Held* patentable over the prior art.

APPEAL from the Patent Office. Serial No. 517,930.

REVERSED.

Murray, Sackhoff & Paddack and *Walter F. Murray* (*Walter S. Murray* of counsel) for Kinney et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

HATFIELD, *J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 2, 3, 4, 18, and 19 in appellants' application for a patent for an invention relating to a homogenizer on the ground of lack of invention over prior art. Claims 7 to 11, inclusive, 13 to 17, inclusive, and 20 were allowed by the Primary Examiner.

Claims 2 and 18 are representative of the appealed claims. They read:

2. In an homogenizer the combination of a plurality of spaced compressor elements, means for forcing material between the elements, and means for mutually reciprocating said elements.

18. In an homogenizer the combination of an elastic body having opposed and continuous compressor elements disposed in spaced relationship, means for passing material between the elements, and reciprocating means for compressing and expanding the body.

The references relied on are: Oehninger (Swiss), 176,438, April 15, 1935; Williams, 2,170,178, August 22, 1939.

The homogenizer disclosed in appellants' application comprises a cylindrical casing having an inlet opening at one end and an outlet opening at the other. Within the casing, and arranged axially thereof, are two coil springs formed of flat strip material, the springs being located at opposite ends of the casing, with one end of each spring abutting the corresponding end of the casing. The opposite ends of the springs are secured to a plunger member which is mounted for reciprocating movement axially of the casing and which, when reciprocated, alternately expands and compresses each of the springs. The fluid to be homogenized enters the casing through the inlet opening where it is agitated between the coils of the springs and finally escapes through the outlet opening.

The Swiss patent to Oehninger discloses a mixing device in which the fluids to be mixed are fed into a chamber containing a coil spring. The patentee states that the fluid mixture passes through the windings of the spring "so that a very good mixing is effected." It is further stated in the patent that the cross section of the wire of which the spring is made "may show any optional form and need by no means be round." In one form of the device the spring is connected with an operating lever, by means of which it may be compressed or expanded.

The patent to Williams discloses a homogenizer comprising a chamber located between a diaphragm and a cover. The fluid to be homogenized flows into this chamber and the diaphragm is vibrated at a frequency of about 276 cycles while the cover vibrates at a frequency of about 436 cycles, thus agitating and homogenizing the fluid.

Claims 2, 3, and 4 were rejected on the patent to Williams. Each of those claims calls for a homogenizer comprising compressor elements and means for "mutually reciprocating" those elements. In the device of the Williams patent the cover and diaphragm are vibrated or reciprocated at different rates. This, of course, would result in some relative movement between them but such movement is irregular and this irregularity is relied on by the patentee as promoting cavitation. In appellants' application, on the other hand, the relative movement between the coils of the springs is regular and produces a uniform action on the material being treated. The device of Williams and that of appellants are, therefore, essentially different in operation.

[1] We are of opinion that the expression "mutually reciprocating," as it must be construed in the light of appellants' application, requires a regular movement of the compressor elements relatively to each other, and that it should not be so broadly construed as to cover two elements which are reciprocated at different rates of speed. The word "mutual," as used by appellants, implies that there is a correspondence between the reciprocations, so that for a given movement of one of the reciprocating elements, there is a corresponding movement of the other. This is not true in the device of the Williams patent and, in view of this fact and of the basic

Vol 615 • No. 4 Tuesday, October 26, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

difference in operating principle between the Williams structure and that of appellants, we are of opinion that claims 2, 3, and 4 are patentable over the structure disclosed in the Williams patent.

Claims 18 and 19 were rejected on the Swiss patent to Oehninger. Those claims call for an elastic body having opposed compressor elements and reciprocating means for moving those elements. In rejecting claims 18 and 19, the Patent Office tribunals have relied on the coils of the spring of the reference patent as compressor elements. It is clear, however, that the patentee did not contemplate that those coils should have any compressing function. The means which he provides for compressing or expanding the spring is merely an adjusting means for varying the distance between the coils of the spring. There is nothing to suggest that there is to be any such movement of the spring during the mixing operation as would result in a compressing action, and the fact that a round wire is used for the spring in the preferred embodiment of the patentee's invention affords a further indication that no compression is intended, since there could be very little, if any compression of fluid between the coils of round wire.

Since the Oehninger patent contemplates an entirely different type of operation from that of appellants' application, and since the patent does not disclose any parts fairly corresponding to the compression elements called for by claims 18 and 19, we are of opinion that those claims were not properly rejected on that patent.

For the reasons stated, the decision of the Board of Appeals is reversed.

REVERSED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

Hereby enters this disclaimer to claims 2, 3, 4 and 5 of said patent.

Cancellation Notices

Refrigeration Corporation of Maryland, its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Refrigeration Engineering, Inc., 7250 E. Slauson Ave., Los Angeles, Calif., to effect the cancellation of trade-mark registration of Refrigeration Corporation of Maryland, Garrison Blvd. at Western Maryland R. R., Baltimore, Md., No. 283,095, dated July 14, 1931, and the notice of such proceeding sent by registered mail to the said Refrigeration Corporation of Maryland at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Refrigeration Corporation of Maryland, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Oct. 7, 1948. *Assistant Commissioner of Patents.*

Robert H. Sommers, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Nopco Chemical Company, First and Essex Sts., Harrison, N. J., to effect the cancellation of trade-mark registration of Robert H. Sommers, 600 Diversey Blvd., Rienzi Hotel, Chicago, Ill., No. 262,738, dated October 22, 1929, and the notice of such proceeding sent by registered mail to the said Robert H. Sommers at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Robert H. Sommers, his assigns or legal representatives shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Oct. 7, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,447,203. OCCUPANT PROPELLED ROUNDABOUT. Patented Aug. 17, 1948. A toy vehicle runs on a circular track having elevated portions at opposite positions to produce a circular ride. A horizontal cross arm is rotatably mounted at the center to form two propeller arms, each having a spring-pressed wheel on its outer end which travels around the track. Each propeller arm has at its outer end two footrests for a standing rider and an upright with a pair of hand grips. One footrest is fixed and the other vertically movable. The movable rest propels the arm by engaging the spring-pressed wheel on upper surface of track. The device is operated like a scooter, by rider shifting weight from one footrest to the other when he goes up or down an incline. Rider is moved forward in his circular ride by gravitational force, as his weight carries the roller down the incline. (Owner) Floyd O'Toole, 150 Falls St., L'Anse, Mich. Group 39—43. Reg. No. 10,073.

Pat. 2,446,144. RATCHET VENTILATOR AND AUTOMATIC SASH LOCK. Patented July 27, 1948. An automatic lock for each sash of a sliding window allows either sash to be opened and locked at any adjusted position. A socket containing a spring is provided to receive a bolt positioned at side of sash. Spring urges bolt into engagement with notches in parting strip when a slide latch is operated. (Owner) F. D. Story, Friendship Route, Arkadelphia, Ark. Groups 24—31; 33—59—83—91; 40. Reg. No. 10,074.

Pat. 2,438,057. BENDING BRAKE HAVING UNITARY ACTUATING MEANS FOR CLAMPING AND BENDING SHEET METAL. Patented Mar. 16, 1948. A bending and forming brake including unitary means whereby with a single movement of a control member the article is gripped and then bent. In the various modifications shown, the main drive shaft performs the two-fold function of camming up one end of the brake or clamp to depress the opposite end and thereafter actuating the bending structure. If desired, the effective driving connection between the power shaft and the roller-actuating levers may be interrupted while continuing the effective drive of the clamping bar. Any sized piece may be worked on by bending a piece a little at a time and moving the piece between bending operations to complete the bend. (Owner) American Reenforced Paper Company, Attleboro, Mass. Group 35—42. Reg. No. 10,075.

Pat. 2,438,319. BENDING BRAKE. Patented Mar. 23, 1948. A small, light, but powerful hand-operated brake for bending sheet metals and the like may be operated by a single operator. A stationary bed has a clamping means mounted above it. A pair of top plates has a guide strip between them. A clamping block is bolted to one of the plates and extends across the guide strip. A stop bar, flush against the top of the plates, slides forwardly and backwardly. An adjusting bar is mounted on top of stop bar, to which additional stop members may be secured, having varied forward extensions. A piece of work having a number of bends may be gauged and bent at a number of stations without stopping for adjustments. (Owner) American Reenforced Paper Company, Attleboro, Mass. Group 35—42. Reg. No. 10,076.

Pat. 2,408,002. BABY JUMPER. Patented Sept. 24, 1946. This device comprises a harness for an infant. The harness consists of a broad and adjustable body band that includes a crotch piece arrangement and a pair of long loop-like hangers at each side. The hangers engage the knobbed ends of a suspension bar connected to a jumper spring-set-up by an adjustable suspension cable. The jumper spring-set-up is made up of several vertically arranged springs attached to upper and lower horizontal connecting bars. The jumper may be hung from the center of a door frame and provide amusement to an infant strapped within. (Owner) A. J. Shurtliff, 225 South 10th Ave., Pocatello, Idaho. Groups 22—11; 25—11—19. Reg. No. 10,077.

Pat. 2,446,549. FLOAT VALVE. Patented Aug. 10, 1948. A float valve, adjustable to differences in water pressure, is designed to open and close with the flow of water. The flow-responsive device adjustably mounted on the valve stem functions as a screen and traps scale and foreign matter to prevent the valve and valve seat from clogging. (Owner) A. Norman, 2142 Rose St., Pittsburgh 19, Pa. Group 33—61. Reg. No. 10,078.

Pat. 2,295,417. LOCK. Patented Sept. 8, 1942. Lock requires a secondary key and a primary key to unlock it. Secondary key is inserted in and permanently attached to lock, while primary key is carried by a person. When primary key is inserted in lock, a hinged section on its inner end is deflected by a cam through an opening in inner end of secondary key. Secondary key is then pulled outwardly to pivot hinged section of primary key downwardly into tumblers until free end of hinged section snaps with a click behind a spring-pressed tooth. The tooth is mounted on a slide which carries a latching bolt. Secondary key is then pushed inwardly to pivot hinged section upwardly out of tumblers to move slide inwardly and withdraw latching bolt. (Owner) Clarence J. McCormick, 1428 West Congress St., Chicago, Ill. Group 83—59. Reg. No. 10,079.

Pat. 2,353,481. FUEL PRODUCING MACHINE. Patented July 11, 1944. Machine generates gas from carbides for engine fuel. A tank having a carbide compartment and a water compartment is mounted on a generating tank in which an endless conveyor for conveying carbide in a horizontal plane is mounted. An exteriorly controlled valve regulates the discharge of water onto an inclined perforated drip pan beneath water compartment. A grooved roller mounted in generating tank registers with a feed passage in bottom of carbide compartment. The roller periodically loads measured quantities of carbide onto one end of conveyor, and water drops from pan onto carbide as it is conveyed to discharge end of conveyor. Generated gas in conveyed through a pipe to a storage

tank, and gases accumulating in carbide compartment pass into same pipe through a screened opening. (Owner) Clarence J. McCormick, 1428 West Congress St., Chicago, Ill. Groups 28—86; 35—59. Reg. No. 10,080.

Pat. 2,336,633. LIGHT CONTROLLED APPARATUS. Patented Dec. 14, 1943. A portable photoelectric cell pick-up apparatus for cameras carries a photo-flash bulb which may be fired in synchronization with firing of flash bulb of camera. Apparatus includes an amplifier having its input connected to the output of a photoelectric cell and a photo-flash bulb associated with the output of the amplifier. One (or more) of the pick-up devices may be in a room at remote point from camera without any wires between it and camera. When photoelectric cell picks up suitable light radiation from the flash of the fired bulb of camera, bulb of pick-up device is fired in synchronization with light impulse picked up by cell. Inventor claims that satisfactory synchronization has been achieved at distances of as much as 150 feet from camera. (Owner) Donald Parson, Jr., Millwood St., R. D. 1, Framingham Centre, Mass. Group 39—12. Reg. No. 10,081.

Pat. 2,447,088. KEYING SYSTEM. Patented Aug. 17, 1948. This keying system, useful in transmitting telegraph signals, involves only two relays and three condensers in addition to the source of current and the usual key for automatically transmitting dash-and-dot signals. A transmitting relay is energized when the key is moved to either position. The relay circuit is completed through normally closed contacts of a spacing relay which has a condenser shunted around its winding to prevent immediate closing of its contacts after its energizing circuit has been opened. The spacing relay also has a condenser shunted around its normally closed contacts, which prolongs the energization of the transmitting relay after the contacts of the spacing relay have opened. In the dash position of the key a third condenser is connected with the second condenser to further prolong the time of energization of the transmitting relay after the contacts of the spacing relay have opened. (Owner) Donald Parson, Jr., Millwood St., R. D. 1, Framingham Centre, Mass. Group 36—62. Reg. No. 10,082.

United States Government Owned Patent

The following patent has been assigned by the inventors, Leon R. Chase and Royal H. Dimick, to the United States of America as represented by the Secretary of the Interior. Licenses to practice the invention will be issued on a non-exclusive and royalty-free basis. Inquiries concerning licenses should be addressed to the Solicitor, U. S. Department of the Interior, Washington 25, D. C.

Pat. 2,441,562. CONTINUOUS READING THERMOCOUPLE TEMPERATURE MEASURING DEVICE FOR ROTARY VESSELS. Patented May 18, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Two series of contacting devices are alternately spaced on opposite sides of a flange around the rim of a rotary vessel, each series being connected to a terminal element of a thermoelectric device within the vessel. Electromotive force generated is carried to the two series of contacting devices and transmitted by a combination of rotating and sliding contacts to a pair of conductors engaging each series. It then passes to an insulated indicating device on the outside of the vessel so that the temperature changes within the vessel are continuously shown. Group 36—13. Reg. No. 10,083.

United States Government Owned Applications

The following applications for Letters Patent have been made available for license only. Licenses will be granted on a non-exclusive, royalty-free, revocable basis.

The applications relate to Internal Combustion Engines. They include Case 19 through Case 23. Cases 1 through 17, relating to antimalarials, were published in the May 13, 1947, Register (Reg. Nos. 5,591–5,607); Case 18, relating to Antibiotics, was published in the May 20, 1947, Register (Reg. No. 5,608).

Applicants for licenses should apply to the Secretary of the Army, Office of the Judge Advocate General, Patents Division, Department of the Army, Washington 25, D. C., identifying the application by CASE NUMBER.

Case No. 19. CYLINDER HEAD ASSEMBLY FOR INTERNAL COMBUSTION ENGINES. This application relates to a cylinder head assembly for Diesel engines which includes a main combustion chamber in the cylinder head, a precombustion chamber removably mounted in the cylinder head and cooling ducts around the precombustion chamber for circulating cooling water around the chamber in thermal contact therewith. Group 35—19. Reg. No. 10,084.

Case No. 20. LUBRICATING SYSTEM FOR INTERNAL COMBUSTION ENGINES. This application is directed to a lubricating system in which all passages for lubricant are inclosed in the engine head and disposed to distribute lubricant under pressure to the various moving parts of the engine. The alleged features of novelty include the disposition and arrangement of the lubricant passages and distribution ports. Groups 35—19; 38—31. Reg. No. 10,085.

Case No. 21. HYDRAULIC CONTROL MEANS FOR INTERNAL COMBUSTION ENGINES. This application relates to internal combustion engines and more particularly to an hydraulically controlled fuel injection mechanism embodying a governor assembly operatively associated with a sleeve valve for automatically controlling the time of fuel injection in accordance with engine speed. Groups 35—19; 38—31. Reg. No. 10,086.

Case No. 22. ENGINE BLOCK FOR INTERNAL COMBUSTION ENGINES. This application is directed to an engine block for internal combustion engines having a base, the lower surface of which, together with the surface beneath the mounting bosses for the engine block, the lower edge of the upper half of the main bearings, and the surface to which an oil pan may be fitted, are all in the same plane, whereby these parts may be machined in one operation. Groups 35—19; 38—31. Reg. No. 10,087.

Case No. 23. COUNTERWEIGHTED CRANKSHAFT AND METHOD OF MAKING SAME. This application is directed to a counterweighted crankshaft for internal combustion engines, the crankshaft being featured by having an elliptically shaped cheek formed with an arcuately shaped recess thereon, and a counterweight including an arcuately shaped portion conforming to the shape of the recess on the crankshaft jack, the arcuately shaped portion of the counterweight being attached to the crankshaft jack in such manner as to enable replacement of the counterweight with another counterweight of the same configuration. Groups 33—92; 35—69. Reg. No. 10,088.

American Bosch Corporation, of Springfield, Mass., offers for license at reasonable royalty the following 158 patents and 17 patent applications (Register Nos. 10,089 through 10,263). Correspondence concerning the patents and applications should be addressed to Raymond A. Paquin, 3664 Main St., Springfield, Mass.

Pat. 1,837,231. MAGNETO. Patented Dec. 22, 1931. Group 36—41. Reg. No. 10,089.

Pat. 1,856,774. LOUD SPEAKER CONSTRUCTION. Patented May 3, 1932. Group 36—61. Reg. No. 10,090.

Pat. 1,858,675. INTERRUPTER GEAR HOUSING. Patented May 17, 1932. Group 36—41. Reg. No. 10,091.

Pat. 1,877,228. RADIO TUNING APPARATUS. Patented Sept. 13, 1932. Group 36—61. Reg. No. 10,092.

Pat. 1,887,320. MAGNETO. Patented Nov. 8, 1932. Group 36—41. Reg. No. 10,093.

Pat. 1,887,522. MAGNETO INTERRUPTER. Patented Nov. 15, 1932. Group 36—41. Reg. No. 10,094.

Pat. 1,889,755. IGNITION GOVERNOR. Patented Dec. 6, 1932. Group 36—19—41. Reg. No. 10,095.

Pat. 1,890,305. MAGNETO. Patented Dec. 6, 1932. Group 36—41. Reg. No. 10,096.

Pat. 1,890,306. MAGNETO. Patented Dec. 6, 1932. Group 36—41. Reg. No. 10,097.

Pat. 1,890,518. MAGNETO. Patented Dec. 13, 1932. Group 36—41. Reg. No. 10,098.

Pat. 1,890,898. FLYWHEEL MAGNETO. Patented Dec. 13, 1932. Group 36—41. Reg. No. 10,099.

Pat. 1,891,369. CARRIER FOR ELECTROMAGNETIC PICK-UP. Patented Dec. 20, 1932. Group 36—61. Reg. No. 10,100.

Pat. 1,892,802. MAGNETO DISTRIBUTOR CONSTRUCTION. Patented Jan. 3, 1933. Group 36—41. Reg. No. 10,101.

Pat. 1,893,840. MAGNETO. Patented Jan. 10, 1933. Group 36—41. Reg. No. 10,102.

Pat. 1,898,835. SUPPORTING DEVICE FOR RADIO APPARATUS. Patented Feb. 21, 1933. Groups 36—61; 38—31. Reg. No. 10,103.

Pat. 1,902,331. DISPLAY DEVICE. Patented Mar. 21, 1933. Groups 36—19; 38—31; 39—93. Reg. No. 10,104.

Pat. 1,902,655. MAGNETO TIMING INDICATOR. Patented Mar. 21, 1933. Group 36—41. Reg. No. 10,105.

Pat. 1,902,874. DUST PROTECTOR DEVICE. Patented Mar. 28, 1933. Group 36—41. Reg. No. 10,106.

Pat. 1,904,692. LIGHTING GENERATOR. Patented Apr. 18, 1933. Group 36—41. Reg. No. 10,107.

Pat. 1,907,428. IGNITION TIMER. Patented May 9, 1933. Group 36—41. Reg. No. 10,108.

Pat. 1,908,119. RADIORECEIVER. Patented May 9, 1933. Group 36—61. Reg. No. 10,109.

Pat. 1,913,575. SPARK PLUG. Patented June 13, 1933. Group 36—41. Reg. No. 10,110.

Pat. 1,913,586. SWITCHING MECHANISM. Patented June 13, 1933. Group 36—61. Reg. No. 10,111.

Pat. 1,914,808. TESTING DEVICE. Patented June 20, 1933. Groups 36—13; 38—31. Reg. No. 10,112.

Pat. 1,914,809. SPARK PLUG TESTER. Patented June 20, 1933. Groups 36—13; 38—31. Reg. No. 10,113.

Pat. 1,914,812. HUMIDIFIER. Patented June 20, 1933. Group 35—84. Reg. No. 10,114.

Pat. 1,916,694. IGNITION COIL AND CONTROLLING DEVICE THEREFOR. Patented July 4, 1933. Group 36—41. Reg. No. 10,115.

Pat. 1,917,046. IGNITION TIMER. Patented July 4, 1933. Group 36—41. Reg. No. 10,116.

Pat. 1,917,690. FUEL SUPPLY PUMP. Patented July 11, 1933. Groups 35—19; 38—31. Reg. No. 10,117.

Pat. 1,917,907. TIMER FOR AIRPLANE ENGINES. Patented July 11, 1933. Groups 36—41; 37—22. Reg. No. 10,118.

Pat. 1,920,743. COUPLING DEVICE. Patented Aug. 1, 1933. Group 36—11—61. Reg. No. 10,119.

Pat. 1,922,655. IGNITION DEVICE. Patented Aug. 15, 1933. Groups 36—41; 37—22. Reg. No. 10,120.

Pat. 1,934,199. COMBINED IGNITION TIMER AND COIL. Patented Nov. 7, 1933. Group 36—41. Reg. No. 10,121.

Pat. 1,935,610. TIMER FOR INTERNAL COMBUSTION ENGINES. Patented Nov. 21, 1933. Group 36—41. Reg. No. 10,122.

Pat. 1,938,655. GOVERNOR. Patented Dec. 12, 1933. Group 36—19—41. Reg. No. 10,123.

Pat. 1,944,590. IGNITION MAGNETO. Patented Jan. 23, 1934. Group 36—41. Reg. No. 10,124.

Pat. 1,944,687. COMBINED CASING AND SUPPORT. Patented Jan. 23, 1934. Groups 36—61; 38—31. Reg. No. 10,125.

Pat. 1,950,986. OIL-IMPREGNATED ARMATURE. Patented Mar. 13, 1934. Group 36—41. Reg. No. 10,126.

Pat. 1,950,987. DISPLAY DEVICE. Patented Mar. 13, 1934. Groups 36—19; 38—31; 39—93. Reg. No. 10,127.

Pat. 1,951,744. CONTAINER. Patented Mar. 20, 1934. Groups 26—64; 36—11; 39—81. Reg. No. 10,128.

Pat. 1,952,321. INTERRUPTER LEVER. Patented Mar. 27, 1934. Groups 36—41; 38—31. Reg. No. 10,129.

Pat. 1,954,087. MAGNETO. Patented Apr. 10, 1934. Group 36—41. Reg. No. 10,130.

Pat. 1,954,088. LOCK-COIL. Patented Apr. 10, 1934. Group 36—41. Reg. No. 10,131.

Pat. 1,960,479. DUAL WAVE BAND RADIORECEIVER. Patented May 29, 1934. Group 36—61. Reg. No. 10,132.

Pat. 1,968,224. IGNITION TIMER. Patented July 31, 1934. Group 36—41. Reg. No. 10,133.

Pat. 1,968,433. TIMER FOR INTERNAL COMBUSTION ENGINES. Patented July 31, 1934. Group 36—41. Reg. No. 10,134.

Pat. 1,968,930. IGNITION SYSTEM. Patented Aug. 7, 1934. Group 36—41. Reg. No. 10,135.

Pat. 1,968,948. WIND DEFLECTOR. Patented Aug. 7, 1934. Group 38—31. Reg. No. 10,136.

Pat. 1,969,866. RADIO SHIELDED CABLE FASTENER. Patented Aug. 14, 1934. Group 36—11—41. Reg. No. 10,137.

Pat. 1,973,378. RADIORECEIVER. Patented Sept. 11, 1934. Group 36—61. Reg. No. 10,138.

Pat. 1,978,159. TIMER MOUNTING. Patented Oct. 23, 1934. Group 36—41. Reg. No. 10,139.

Pat. 1,978,161. IGNITION TIMER. Patented Oct. 23, 1934. Group 36—41. Reg. No. 10,140.

Pat. 1,978,162. TIMER FOR INTERNAL COMBUSTION ENGINES. Patented Oct. 23, 1934. Group 36—41. Reg. No. 10,141.

Pat. 1,979,313. PROGRAM DISTRIBUTION SYSTEM. Patented Nov. 6, 1934. Group 36—61. Reg. No. 10,142.

Pat. 1,979,314. POWER LINE REACTOR. Patented Nov. 6, 1934. Group 36—61. Reg. No. 10,143.

Pat. 1,979,315. RADIO APPARATUS. Patented Nov. 6, 1934. Group 36—61. Reg. No. 10,144.

Pat. 1,979,317. ELECTRIC RELAY. Patented Nov. 6, 1934. Group 36—11—61. Reg. No. 10,145.

Pat. 1,979,453. LOUD SPEAKER. Patented Nov. 6, 1934. Group 36—11—61. Reg. No. 10,146.

Pat. 1,980,038. ELECTRIC RELAY. Patented Nov. 6, 1934. Group 36—11—61. Reg. No. 10,147.

Pat. 1,980,178. MACHINE TOOL ATTACHMENT. Patented Nov. 13, 1934. Group 35—43. Reg. No. 10,148.

Pat. 1,988,132. RADIO CABINET. Patented Jan. 15, 1935. Groups 25—11; 36—61. Reg. No. 10,149.

Pat. 1,989,057. ELECTRIC RELAY. Patented Jan. 22, 1935. Group 36—11—41. Reg. No. 10,150.

Pat. 1,990,563. FUEL FEEDING APPARATUS. Patented Feb. 12, 1935. Groups 35—19; 38—31. Reg. No. 10,151.

Pat. 1,993,560. ELECTRICAL CONDENSER. Patented Mar. 5, 1935. Group 36—41. Reg. No. 10,152.

Pat. 1,993,765. COMBINED LAMP AND HORN. Patented Mar. 12, 1935. Groups 36—11; 38—31. Reg. No. 10,153.

Pat. 1,996,946. MAGNETIC ROTOR. Patented Apr. 9, 1935. Group 36—41. Reg. No. 10,154.

Pat. 1,996,947. ELECTRIC GENERATOR. Patented Apr. 9, 1935. Group 36—41. Reg. No. 10,155.

Pat. 1,996,948. MAGNETOS WITH ROTATING MAGNETS. Patented Apr. 9, 1935. Group 36—41. Reg. No. 10,156.

Pat. 2,005,063. METHOD OF OPERATING INTERNAL COMBUSTION ENGINES. Patented June 18, 1935. Groups 35—19; 38—31. Reg. No. 10,157.

Pat. 2,005,098. VARIABLE CONDENSER. Patented June 18, 1935. Group 36—41. Reg. No. 10,158.

Pat. 2,005,806. CIRCUIT BREAKER. Patented June 25, 1935. Group 36—19—41. Reg. No. 10,159.

Pat. 2,007,373. MAGNETO. Patented July 9, 1935. Group 36—41. Reg. No. 10,160.

Pat. 2,013,335. MAGNETO. Patented Sept. 3, 1935. Group 36—41. Reg. No. 10,161.

Pat. 2,013,878. ELECTRIC CONVERTER. Patented Sept. 10, 1935. Group 36—19—61. Reg. No. 10,162.

Pat. 2,020,302. FUEL PUMP. Patented Nov. 12, 1935. Groups 35—19; 38—31. Reg. No. 10,163.

Pat. 2,021,380. POWER SUPPLY SYSTEM FOR RADIO APPARATUS. Patented Nov. 19, 1935. Group 36—19—61. Reg. No. 10,164.

Pat. 2,023,005. RADIO DIAL MECHANISM. Patented Dec. 3, 1935. Group 36—61. Reg. No. 10,165.

Pat. 2,025,093. INDUCTANCE DEVICE. Patented Dec. 24, 1935. Group 36—61. Reg. No. 10,166.

Pat. 2,026,495. TONE CONTROL FOR RADIOS. Patented Dec. 31, 1935. Group 36—61. Reg. No. 10,167.

Pat. 2,029,523. TONE COMPENSATED VOLUME CONTROL. Patented Feb. 4, 1936. Group 36—61. Reg. No. 10,168.

Pat. 2,030,453. HUMIDIFIER. Patented Feb. 11, 1936. Group 35—84. Reg. No. 10,169.

Pat. 2,030,454. HUMIDIFIER APPARATUS. Patented Feb. 11, 1936. Group 35—84. Reg. No. 10,170.

Pat. 2,031,625. REGULATING DEVICE FOR INTERNAL COMBUSTION ENGINES. Patented Feb. 25, 1936. Groups 35—19; 38—31. Reg. No. 10,171.

Pat. 2,033,477. IGNITION TIMING MECHANISM. Patented Mar. 10, 1936. Group 36—41. Reg. No. 10,172.

Pat. 2,034,970. NOISE SUPPRESSOR FOR RADIO. Patented Mar. 24, 1936. Group 36—61. Reg. No. 10,173.

Pat. 2,034,974. OSCILLATOR CIRCUIT. Patented Mar. 24, 1936. Group 36—61. Reg. No. 10,174.

Pat. 2,043,676. PROTECTIVE DIAL LIGHT. Patented June 9, 1936. Group 36—61. Reg. No. 10,175.

Pat. 2,049,487. FLUID DISTRIBUTING AND DELIVERY CONTROL MEANS. Patented Aug. 4, 1936. Groups 35—19; 38—31. Reg. No. 10,176.

Pat. 2,055,431. RADIO RECEIVING APPARATUS. Patented Sept. 22, 1936. Group 36—61. Reg. No. 10,177.

Pat. 2,057,241. DYNAMO-ELECTRIC MACHINE. Patented Oct. 13, 1936. Group 36—41. Reg. No. 10,178.

Pat. 2,061,839. STATOR STRUCTURE FOR DYNAMO ELECTRIC MACHINES. Patented Nov. 24, 1936. Group 36—41. Reg. No. 10,179.

Pat. 2,062,253. RADIO COIL AND SWITCH ASSEMBLY. Patented Nov. 24, 1936. Group 36—61. Reg. No. 10,180.

Pat. 2,064,520. RADIO DIAL. Patented Dec. 15, 1936. Group 36—61. Reg. No. 10,181.

Pat. 2,073,604. FUEL DISTRIBUTING VALVE. Patented Mar. 16, 1937. Groups 35—19; 38—31. Reg. No. 10,182.

Pat. 2,075,904. IGNITION TIMER. Patented Apr. 6, 1937. Group 36—41. Reg. No. 10,183.

Pat. 2,076,771. RADIO RECEIVER CONSTRUCTION. Patented Apr. 13, 1937. Group 36—61. Reg. No. 10,184.

Pat. 2,087,296. FUEL FEEDING DEVICE. Patented July 20, 1937. Groups 35—19; 38—31. Reg. No. 10,185.

Pat. 2,090,688. FUEL SUPPLY PUMP. Patented Aug. 24, 1937. Groups 35—19; 38—31. Reg. No. 10,186.

Pat. 2,093,477. FUEL PUMP. Patented Sept. 21, 1937. Groups 35—19; 38—31. Reg. No. 10,187.

Pat. 2,108,398. MOUNTING FOR TUBULAR ARTICLES. Patented Feb. 15, 1938. Groups 36—11; 36—61. Reg. No. 10,188.

Pat. 2,108,399. MOUNTING DEVICE FOR TUBULAR ARTICLES. Patented Feb. 15, 1938. Groups 36—11; 36—61. Reg. No. 10,189.

Pat. 2,118,313. ELECTRIC IGNITION GENERATOR. Patented May 24, 1938. Group 36—41. Reg. No. 10,190.

Pat. 2,124,528. ELECTRIC IGNITION SYSTEM. Patented July 26, 1938. Group 36—41. Reg. No. 10,191.

Pat. 2,134,175. WAVE FILTER. Patented Oct. 25, 1938. Group 36—61. Reg. No. 10,192.

Pat. 2,141,141. IGNITION COIL. Patented Dec. 20, 1938. Group 36—41. Reg. No. 10,193.

Pat. 2,148,424. ELECTRIC IGNITION INTERRUPTER. Patented Feb. 28, 1939. Group 36—41. Reg. No. 10,194.

Pat. 2,149,397. ELECTRIC IGNITION SYSTEM. Patented Mar. 7, 1939. Group 36—41. Reg. No. 10,195.

Pat. 2,150,206. ELECTRIC CIRCUIT INTERRUPTER. Patented Mar. 14, 1939. Group 36—41. Reg. No. 10,196.

Pat. 2,150,859. VENTILATOR ATTACHMENT FOR ELECTRIC IGNITION APPARATUS. Patented Mar. 14, 1939. Group 36—41. Reg. No. 10,197.

Pat. 2,151,955. STATOR STRUCTURE FOR DYNAMO-ELECTRIC MACHINES. Patented Mar. 28, 1939. Group 36—41. Reg. No. 10,198.

Pat. 2,156,677. RADIO TUNING DEVICE. Patented May 2, 1939. Group 36—61. Reg. No. 10,199.

Pat. 2,156,679. TUNING MECHANISM FOR RADIO APPARATUS. Patented May 2, 1939. Group 36—61. Reg. No. 10,200.

Pat. 2,161,251. IGNITION DISTRIBUTOR. Patented June 6, 1939. Group 36—41. Reg. No. 10,201.

Pat. 2,218,109. GENERATOR REGULATOR. Patented Oct. 15, 1940. Group 36—41. Reg. No. 10,202.

Pat. 2,239,650. ENGINE DRIVING MECHANISM FOR MAGNETOS. Patented Apr. 22, 1941. Group 36—41. Reg. No. 10,203.

Pat. 2,240,804. INDICATING MECHANISM FOR IGNITION INTERRUPTERS. Patented May 6, 1941. Group 36—41. Reg. No. 10,204.

Pat. 2,243,416. MAGNETO. Patented May 27, 1941. Group 36—41. Reg. No. 10,205.

Pat. 2,243,418. MAGNETO APPARATUS. Patented May 27, 1941. Group 36—41. Reg. No. 10,206.

Pat. 2,246,901. DISTRIBUTOR CABLE CONNECTOR. Patented June 24, 1941. Groups 36—11; 36—41. Reg. No. 10,207.

Pat. 2,250,682. GAP CONNECTOR IN IGNITION GENERATORS. Patented July 29, 1941. Group 36—41. Reg. No. 10,208.

Pat. 2,250,809. ENGINE DRIVING MECHANISM FOR MAGNETOS. Patented July 29, 1941. Group 36—41. Reg. No. 10,209.

Pat. 2,253,201. MAGNETO WITH PROTECTIVE MECHANISMS. Patented Aug. 19, 1941. Group 36—41. Reg. No. 10,210.

Pat. 2,259,229. IGNITION COIL. Patented Oct. 14, 1941. Group 36—41. Reg. No. 10,211.

Pat. 2,259,693. FUEL GOVERNOR FOR INTERNAL COMBUSTION ENGINES. Patented Oct. 21, 1941. Group 36—41. Reg. No. 10,212.

Pat. 2,267,396. MULTICYLINDER IGNITION GENERATOR. Patented Dec. 23, 1941. Group 36—41. Reg. No. 10,213.

Pat. 2,269,651. ROTOR FOR ELECTRIC GENERATORS. Patented Jan. 13, 1942. Group 36—41. Reg. No. 10,214.

Pat. 2,281,222. SPEED REGULATOR FOR INTERNAL COMBUSTION ENGINES. Patented Apr. 28, 1942. Group 36—41. Reg. No. 10,215.

Pat. 2,281,862. IGNITION COIL AND TERMINAL CONNECTOR THEREFOR. Patented May 5, 1942. Group 36—41. Reg. No. 10,216.

Pat. 2,286,301. LIQUID PUMP. Patented June 16, 1942. Groups 35—19; 38—31. Reg. No. 10,217.

Pat. 2,286,302. LIQUID PUMP. Patented June 16, 1942. Groups 35—19; 38—31. Reg. No. 10,218.

Pat. 2,298,652. MAGNET STATOR STRUCTURE FOR MAGNETOS. Patented Oct. 13, 1942. Group 36—41. Reg. No. 10,219.

Pat. 2,302,896. GROUNDING MECHANISMS FOR MAGNETOS. Patented Nov. 24, 1942. Group 36—41. Reg. No. 10,220.

Pat. 2,305,448. DOUBLE MAGNETO GENERATOR UNIT. Patented Dec. 15, 1942. Group 36—41. Reg. No. 10,221.

Pat. 2,308,973. MAGNETO. Patented Jan. 19, 1943. Group 36—41. Reg. No. 10,222.

Pat. 2,312,447. MULTICYLINDER MAGNETO. Patented Mar. 2, 1943. Group 36—41. Reg. No. 10,223.

Pat. 2,320,947. FASTENING MEANS. Patented June 1, 1943. Group 36—41. Reg. No. 10,224.

Pat. 2,330,028. MANUAL LUBRICATOR FOR IGNITION INTERRUPTERS. Patented Sept. 21, 1943. Group 36—41. Reg. No. 10,225.

Pat. 2,332,665. MULTICYLINDER LIQUID PUMP ASSEMBLY. Patented Oct. 26, 1943. Groups 35—19; 38—31. Reg. No. 10,226.

Pat. 2,336,032. FUEL INJECTION NOZZLE. Patented Dec. 7, 1943. Groups 35—19; 38—31. Reg. No. 10,227.

Pat. 2,348,896. CIRCUIT BREAKER. Patented May 16, 1944. Group 36—41. Reg. No. 10,228.

Pat. 2,355,211. CONTACT OPENING INDICATOR FOR IGNITION GENERATORS. Patented Aug. 8, 1944. Group 36—41. Reg. No. 10,229.

Pat. 2,360,835. METHOD OF MAKING INDUCTION COILS. Patented Oct. 24, 1944. Group 36—41. Reg. No. 10,230.

Pat. 2,380,607. FLUID PUMP. Patented July 31, 1945. Groups 35—19; 38—31. Reg. No. 10,231.

Pat. 2,388,681. MIXTURE CONTROL APPARATUS. Patented Nov. 13, 1945. Groups 35—19; 38—31. Reg. No. 10,232.

Pat. 2,393,900. BEARING FOR DYNAMOS. Patented Jan. 29, 1946. Groups 35—66; 36—19. Reg. No. 10,233.

Pat. 2,394,234. MAGNETO. Patented Feb. 5, 1946. Group 36—41. Reg. No. 10,234.

Pat. 2,395,611. IGNITION DISTRIBUTOR. Patented Feb. 26, 1946. Group 36—41. Reg. No. 10,235.

Pat. 2,395,629. MAGNETO IGNITION SYSTEM. Patented Feb. 26, 1946. Group 36—41. Reg. No. 10,236.

Pat. 2,395,648. AUTOMATIC FUEL MIXTURE CONTROL SYSTEM. Patented Feb. 26, 1946. Groups 35—19; 38—31. Reg. No. 10,237.

Pat. 2,419,683. SEALING HIGH TENSION WIRES IN SOCKETS. Patented Apr. 29, 1947. Group 36—11—41. Reg. No. 10,238.

Pat. 2,420,407. HIGH TENSION MAGNETO. Patented May 13, 1947. Group 36—41. Reg. No. 10,239.

Pat. 2,429,806. FUEL INJECTION PUMP. Patented Oct. 28, 1947. Groups 35—19; 38—31. Reg. No. 10,240.

Pat. 2,431,686. VARIABLE CAPACITY PUMP. Patented Dec. 2, 1947. Groups 35—19; 38—31. Reg. No. 10,241.

Pat. 2,434,492. ELECTRIC COIL. Patented Jan. 13, 1948. Group 36—41. Reg. No. 10,242.

Pat. 2,434,511. METHODS OF MAKING ELECTRIC COILS. Patented Jan. 13, 1948. Group 36—41. Reg. No. 10,243.

Pat. 2,436,797. FUEL INJECTION PUMP. Patented Mar. 2, 1948. Groups 35—19; 38—31. Reg. No. 10,244.

Pat. 2,441,277. COMBINED INJECTOR NOZZLE AND SPARK PLUG. Patented May 11, 1948. Group 36—41. Reg. No. 10,245.

Pat. 2,441,922. IGNITION DISTRIBUTOR. Patented May 18, 1948. Group 36—41. Reg. No. 10,246.

Serial No. 575,418. ELECTRIC SPARK GAPS. An electric spark gap for use in oscillatory electric circuits or electrical devices in which the operation of the spark gap is stabilized throughout its operative period by providing means exteriorly of the spark gap envelope for maintaining a substantially uniform voltage gradient between the two electrodes of the gap irrespective of the proximity of outside grounded devices, thereby reducing or eliminating the deflection of the spark discharges and the distribution of point electrical discharges in the space outside the spark gap envelope which is stabilized or the variation of their effect is rendered negligible. Group 36—41. Reg. No. 10,247.

Serial No. 503,470. FUEL INJECTION PUMP. A high speed, high pressure fuel injection pump for injecting liquid fuel into the engine cylinders and which is capable of satisfactory operation at the highest engine operating speeds without undue wear, without mechanical failure and which requires a small amount of power for its operation. The pump can be applied to either Diesel engines or spark ignition gasoline engines and when used in connection with the latter is capable of adjusting the quantity of fuel injected with unusual accuracy. Groups 35—19; 38—31. Reg. No. 10,248.

Serial No. 575,872. IGNITION HARNESS ASSEMBLY. A separate converter unit capable of being easily and quickly interposed in or removed from a harness lead of an ignition system as a unit without removing the harness lead from the engine or dismantling the converter and including a housing containing the electrical elements for converting the current and detachable connections on the housing for making electrical connection at opposite ends of the housing with the lead without the necessity of soldered connections. Group 36—11—41. Reg. No. 10,249.

Serial No. 575,873. IGNITION HARNESS ASSEMBLY. An electrical lead for detachably connecting a conductor to an electrical component. The lead having a terminal having a contact portion and a connecting portion, the connecting portion being adapted to receive the end of the electrical conductor and be connected thereto and the contact portion having a hollow contact adapted to receive a contact of an electrical component and be retained in resilient contact therewith. Group 36—11—41. Reg. No. 10,250.

Serial No. 575,874. ELECTRICAL CONDENSERS. An electrical condenser of the roll type formed by winding alternate layers of a conducting material and an insulating material on a hollow mandrel with a terminal within and adjacent one end of said hollow mandrel and a ground terminal member secured to the opposite end face of the condenser and having ground contact portions extending from said ground terminal member. Group 36—41. Reg. No. 10,251.

Serial No. 587,160. RADIO-SHIELDED UNITS. A radio-shielded unit consisting of a casing containing a coil, a relay and a terminal. A lead extending into the casing and connected to the terminal and a radio-shielded housing in the casing and enclosing the terminal, the relay being adjacent the shielded housing which has contacts extending through its wall and contacts external of the housing and operated by the relay for electrically connecting the contacts on the housing with the relay. Group 36—41. Reg. No. 10,252.

Serial No. 590,941. GROUND TERMINAL FILTER. A ground terminal filter for aviation magnetos and consisting of a radio-shielded, low impedance filter which is relatively small and short allowing its use in the available space and which is interchangeable with the ground terminal of existing devices and, therefore, capable of being interposed in the line from the ground terminal of the magneto to the pilot's cockpit control. Group 36—11—41. Reg. No. 10,253.

Serial No. 591,914. FUEL INJECTION PUMP. A fuel injection pump for injecting liquid fuel into the engine cylinders of large engines such as aviation engines, which doubles the number of cylinders of the fuel injection pump without substantially increasing the weight and space requirements of the pump, thereby simplifying the engine arrangement including the mounting and driving of the pumps and the linkages for controlling their outputs and whereby the output of each cylinder can be adjusted independently of the output of every other cylinder. Groups 35—19; 38—31. Reg. No. 10,254.

Serial No. 598,754. FUEL INJECTION PUMPS. A fuel injection pump for use with internal combustion engines wherein liquid fuel is injected periodically in accurately metered amounts into the engine cylinders or into the air intake pipe or pipes near the engine cylinders, and wherein the pumping chamber is in open connection with the source of fuel supply during the entire return stroke of the plunger thus preventing the formation of vapor in the pumping chamber during the plunger return stroke and which pump is suited to handling highly volatile fuels and to cooperating with engines operating at relatively high speeds. Groups 35—19; 38—31.. Reg. No. 10,255.

Serial No. 603,170. IGNITION SYSTEMS AND SPARK GAPS. A spark plug and transformer unit for use in an ignition system for an internal combustion engine and which is relatively compact in size and simple in construction and which may be used at high altitudes without electrical flashover. The transformer unit embodies a solderless primary coil and a secondary coil both formed on bases of insulating material and enclosed within a radio-shielded spark plug. Group 36—41. Reg. No. 10,256.

Serial No. 615,578. SPEED CONTROL DEVICE. A speed control for DC shunt motors which allows the obtaining of speeds below the basic speed of the motor without encountering the drooping speed torque curve that results from the introduction of armature resistance and which may be positioned remotely from the motor which is to be controlled thereby and which comprises a resistor in series with the armature of the motor and contacts bridging the resistor and a coil connected across the current source of the motor for causing alternate opening and closing of the contacts. Group 36—41. Reg. No. 10,257.

Serial No. 618,635. ELECTRICAL DEVICES. An electrical element such as a roll type condenser consisting of wound layers of superimposed layers of conducting and insulating material with the layers of insulating material being impregnated with a liquid organo-silicon oxide polymer. Group 36—41. Reg. No. 10,258.

Serial No. 618,745. IGNITION SYSTEMS. An ignition system including an electronic supply and control for such ignition system with the electronic supply and control consisting of a rectifier used as an energy source with the rectifier grounded and also connected to a high vacuum tube which is normally biased to cut off but has provision within its grid circuit for shifting the bias in a positive direction for a brief instance each time a spark is required. Group 36—41. Reg. No. 10,259.

Serial No. 618,746. ELECTRONIC DISTRIBUTOR. A high vacuum electronic distributor for ignition systems with relatively low tension distribution, which distributor contains no moving parts and which at the same time accomplishes the timing operation normally accomplished by breaker points. The distributor comprises an electronic tube interposed between the source of power and the ignition system and the tube functions as a timer as well as distributor. Group 36—41. Reg. No. 10,260.

Serial No. 621,463. FUEL INJECTION SYSTEM. A fuel injection system for internal combustion engines, which system is completely pressure operated and has no mechanical connection with the engine pistons but wherein both the fuel injection and timing is operated by cylinder pressure and wherein adjusting means is provided for adjustably controlling the timing of the injections. The injection pump and nozzle are each connected by pipe lines to the interior of the cylinder and pressure from the cylinder operates the fuel injection pump and also operates to time the injection of fuel by the nozzle. Groups 35—19; 38—31. Reg. No. 10,261.

Serial No. 635,371. ELECTROMAGNETIC DEVICES. An electromagnetic device such as a magneto which is of the gearless type and operates at camshaft speed and which is coaxial in that it has the coil surrounding the shaft and which employs the rotor or stator poles more than once each revolution thereby utilizing a smaller rotor with fewer poles and thus providing a more compact magneto construction. Group 36—41. Reg. No. 10,262.

Serial No. 652,137. GOVERNOR. A hydraulic governor for controlling the supply of fuel to an engine and which governor is adapted to be operated by oil from the engine oil supply and which governor consists of a spinner on a shaft and rotatable therewith and movable in a direction parallel to the axis of the shaft and a servomotor actuated by fluid from a pressure inlet line to control the supply of fuel to the engine. Groups 35—19; 38—31. Reg. No. 10,263.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING SEPTEMBER, 1948

EX PARTE E. DALTROFF & CIE. (DOING BUSINESS AS PARFUMERIE CARON), Registration No. 181,205.

In a decision rendered September 3, 1948 (169 Ms. Dec. 977, 78 USPQ 373), *Assistant Commissioner Daniels* denied a petition from the action of the Examiner refusing the application of E. Daltroff & Cie. (doing business as Parfumerie Caron), of Paris, France, pursuant to section 7(d) of the Trade-Mark Act of 1946 to amend a registration under the Trade-Mark Act of 1905, which it owns, consisting of the words "Bain de Champagne" for various toilet preparations, by changing the style of type in which the words are set out in the registration, and also to add the word "ROYAL," changing the mark to "ROYAL BAIN DE CHAMPAGNE," no question being raised as to the change in style of type.

It was held that the Examiner was right in ruling that the proposed addition of the word "ROYAL" would alter materially the character of the mark.

After noting that after refusal to enter the amendment, petitioner amended the petition for amendment by disclaiming the word "ROYAL," it was held that how such a disclaimer can render the amendment acceptable is not clear, nor in any event would it be proper to add a word merely for the purpose of disclaiming it.

SCHERING CORPORATION *v.* PENILIN, INC., Opposition No. 24,104.

In a decision rendered September 10, 1948 (169 Ms. Dec. 980, 78 USPQ 375), *Assistant Commissioner Murphy* granted reconsideration of his decision (611 O. G. 1024, 77 USPQ 474) of May 20, 1948, but was not persuaded that there is any error in the decision as rendered.

In response to applicant's contention that since opposer took no testimony it is not entitled to assumptions that might be drawn from facts not in the record, it was held that reference to standard works is merely taking judicial knowledge of established facts.

NANCY ANN STORYBOOK DOLLS, INC., *v.* DOMENICK IPPOLITO (DOING BUSINESS AS HOLLYWOOD DOLL MANUFACTURING COMPANY), Opposition No. 25,341.

In a decision rendered September 17, 1948 (169 Ms. Dec. 987, 79 USPQ 20), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of Nancy Ann Storybook Dolls, Inc., of San Francisco, Calif., to the application of Domenick Ippolito (doing business as Hollywood Doll Manufacturing Company), of Glendale, Calif., to register the words "Garden Lady" under the Trade-Mark Act of 1905 as a trade-mark for dolls and dolls' clothes. The opposition was based upon opposer's ownership and prior use of the trade-mark "ANNIE AT THE GARDEN GATE," registration No. 404,578, and "LADY IN WAITING," registration No. 404,889, for dolls.

It was held that the only issue for determination on the appeal is the similarity of the marks.

It was held that the Examiner was right in finding that it was necessary to consider only the registration of "ANNIE AT THE GARDEN GATE" and that the Examiner was correct in holding that, considering the marks as a whole, the impression given by the two marks in their entireties was sufficient to give rise to likelihood of confusion within the meaning of the act.

NANCY ANN STORYBOOK DOLLS, INC., *v.* DOMENICK IPPOLITO (DOING BUSINESS AS HOLLYWOOD DOLL MANUFACTURING COMPANY), Oppositions Nos. 25,342, 25,343, 25,344, and 25,345.

In a decision rendered September 17, 1948 (169 Ms. Dec. 983, 79 USPQ 21), *Assistant Commissioner Daniels* reversed, in each of four cases, the decisions of the Examiner of Interferences, who had sustained the notices of opposition of Nancy Ann Storybook Dolls, Inc., of San Francisco, Calif., based upon ownership and prior use by the opposer of the trade-mark "LADY IN WAITING," registration No. 404,889, for dressed dolls, to four applications of Domenick Ippolito (doing business as Hollywood Doll Manufacturing Company), of Glendale, Calif., for registration, respectively, of the words: "Lady Elaine," "Lady Guinevere," "Lady Isolde," and "Lady Lynette"; registration of each being sought as a trade-mark under the act of 1905 as a trade-mark for dolls and dolls' clothes.

It was held that the only question for consideration is whether or not the marks sought to be registered by applicant are confusingly similar to opposer's mark.

In response to applicant's contention that the opposition cannot be sustained because of opposer's nonuse of the mark, it was held that the Examiner was right in ruling that opposer being the registered owner of the mark "LADY IN WAITING," its temporary nonuse of the mark becomes immaterial here.

It was held that it is well established that the grounds of opposition must be stated in the notice thereof, and opposer has failed to show any right to the individual name or to base this opposition on the practice of use of individual names with "LADY IN WAITING."

It was held that, in view of the suggestive nature of "Lady" as applied to dolls there appears to be no basis for the claim that opposer's use of "LADY IN WAITING" should entitle it to prevent registration of "Lady" in combination with other words or names which sufficiently differentiate from opposer's said mark, so that the marks of applicant, when considered in their entireties, do not bear such a resemblance to opposer's trade-mark "LADY IN WAITING," or to that mark as used with the individual names referred to above as to give rise to any reasonable likelihood of confusion in trade within the meaning of section 5 of the Trade-Mark Act of 1905.

NANCY ANN STORYBOOK DOLLS, INC., *v.* DOMENICK IPPOLITO, Opposition No. 25,348.

In a decision rendered September 17, 1948 (169 Ms. Dec. 990, 79 USPQ 23), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition of Nancy Ann Storybook Dolls, Inc., of San Francisco, Calif., to an application of Domenick Ippolito, of Glendale, Calif., to register a trade-mark under the Trade-Mark Act of 1905 and holding ex parte and without regard to the issues of the opposition that applicant's mark was merely descriptive of the goods and was not entitled to registration.

After noting that applicant filed no brief in this case and presented no argument in connection with this appeal, it was held that the record discloses no manifest error in the Examiner's decision, which is accordingly affirmed.

NANCY ANN STORYBOOK DOLLS, INC., *v.* DOMENICK IPPOLITO, Opposition No. 25,349.

In a decision rendered September 17, 1948 (169 Ms. Dec. 989, 79 USPQ 23), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the notice of opposition of Nancy Ann Storybook Dolls, Inc., of San Francisco, Calif., to the application of Domenick Ippolito, of Glendale, Calif., to register a trade-mark under the Trade-Mark Act of 1905 and holding ex parte and without regard to the issues of the opposition that applicant's mark was merely descriptive of the goods and was not entitled to registration.

After noting that applicant has filed no brief in this case and presented no argument in connection with this appeal, it was held that the record discloses no manifest error in the Examiner's decision, which is accordingly affirmed.

EX PARTE STRATHMORE PAPER COMPANY, Serial No. 482,226.

In a decision rendered September 28, 1948 (169 Ms. Dec. 993, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Strathmore Paper Company, of West Springfield, Mass., the word "Porcelain" as a trade-mark for writing and printing paper under the Trade-Mark Act of 1920, on the ground that the word "Porcelain" as applied to applicant's goods is devoid of trade-mark significance.

After noting that the Examiner in support of his ruling cited definitions of "Porcelain" which indicate that it is a type of paper and show that it is commonly used and recognized as such in the paper industry, it was held that applicant having failed to show that the definitions cited are incorrect or that the meaning referred to is not known and established, the mark falls in the same category, as stated by the Examiner, as "parchment" paper or "paraffin" paper and as such is devoid of trade-mark significance.

EX PARTE LYMAN ELECTRONIC CORPORATION, Serial No. 505,113.

In a decision rendered September 28, 1948 (169 Ms. Dec. 995, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register, under the Trade-Mark Act of 1905, to Lyman Electronic Corporation, of Springfield, Mass., the notation "Callmaster," written in script, as a trade-mark for electronic intercommunication sets and systems, in view of a prior registration, No. 363,989, disclosing the word "DoormasteR" for interior telephone systems.

After noting that no question is raised by the applicant as to the similarity of the goods of the parties, that the Examiner stated that "call" indicates a use of applicant's product and that applicant agrees that as applied to these goods the prefix possesses a descriptive significance, it was held that the Examiner of Trade-Marks was right in ruling that applicant's mark considered as a whole, approaches that of the registration so closely in sound and appearance that there is reasonable likelihood of confusion in the minds of purchasers.

CRANBERRY CANNERS, INC. (BY CHANGE OF NAME NATIONAL CRANBERRY ASSOCIATION) *v.* NESTLE'S MILK PRODUCTS, INC. (BY CHANGE OF NAME THE NESTLE COMPANY, INC.), Opposition No. 25,134.

In a decision rendered September 28, 1948 (169 Ms. Dec. 991, 79 USPQ —) *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing the notice of opposition of Cranberry Canners, Inc. (by change of name National Cranberry Association), of Hanson, Mass., to the application of Nestle's Milk Products, Inc. (by change of name The Nestle Company, Inc.), of New York, N. Y., to register a mark comprising the word "NESPRAY" as a trade-mark for powdered milk, under the Trade-Mark Act of 1905. Opposer relied upon ownership and prior use of the trade-mark "Ocean Spray" for fresh cranberries and various cranberry products.

It was held that the Examiner of Interferences was right in ruling that, when viewed in their entireties, the marks possess differences in appearance, sound and significance to the extent that the cumulative effect thereof taken together with the differences in the respective products to which they are applied is deemed sufficient to preclude any reasonable likelihood of confusion in trade or deception of purchasers as to the origin thereof.

WYETH, INCORPORATED, *v.* MONT-O-MIN SALES CORPORATION, Opposition No. 25,168.

In a decision rendered September 28, 1948 (169 Ms. Dec. 996, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Wyeth, Incorporated, of Philadelphia, Pa., to the application of Mont-O-Min Sales Corporation, of Oakland, Calif., to register the word "Mont-O-Min" (with certain disclaimed words), as a trade-mark for vitamin and mineral capsules, under the Trade-Mark Act of 1905. The notice of opposition alleged opposer's ownership and prior use of the trade-mark "MORRAMIN" for goods alleged to be similar, and also set up ownership of registration of the mark, No. 215,885, for medicinal alterative and reconstructive tonic for nervous debility, anaemia, lack of appetite, malnutrition, and disorders due to exhausted condition of the system.

After noting that there is no question as to opposer's prior use and ownership of the trade-mark "MORRAMIN" for the goods stated in its registration, it was held that while the product of each of the parties may differ as to precise composition and usage, they are certainly goods of the same descriptive properties.

It was held that the Examiner of Interferences was right in ruling that "Mont-O-Min" and "MORRAMIN" bear such near resemblance as to be likely to give rise to confusion in trade and deception of purchasers when applied concurrently to the products here involved and that, in view of the close similarity of the marks and the similarity of the goods here involved, the so-called doctrine of cumulative differences cannot apply as suggested by applicant.

In response to applicant's contention that opposer's apparent failure to take any action against the users of certain other marks including "Min" constitutes laches or estoppel in accordance with section 19 of the Trade-Mark Act of 1946, it was held that there is no suggestion of delay in proceeding as against applicant and delay in asserting rights as against third parties can give no rights which applicant can assert and that the Examiner's finding of similarity between the marks is based upon the marks in their entireties, and not merely on the common use of the syllable "Min."

EX PARTE DUFFY-MOTT COMPANY, INC., Serial No. 498,987.

In a decision rendered September 29, 1948 (171 Ms. Dec. 1, 79 USPQ —), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Marks, who had refused to register to Duffy-Mott Company, Inc., of New York, N. Y., a trade-mark for prune juice, under the Trade-Mark Act of 1905, applicant being the owner of two previous registrations of the same mark for vinegar, and cider, respectively, both registered under the ten-year proviso of the act of 1905, applicant claiming use of the mark on prune juice since May 1, 1938, but use on other products involved since 1883, over two similar, although not identical, marks disclosed in two prior registrations of another registrant, also registered under the ten-year proviso, for dried and canned fruits.

It was held, in view of the fact that refusal to register applicant's mark will deprive applicant of the benefit of registration for a product upon which it actually uses the mark, while its registration will not, upon the facts disclosed in this record, affect the present situation as to registration to any material extent, that in the absence of any indication of conflict or interference for so many years, any doubt should be resolved in applicant's favor and that the mark should be passed for publication, and in the absence of opposition should be registered, this action being taken only because applicant apparently comes squarely within the provisions of the 1920 amendment to the act of 1905, and in view of the unusual circumstances here involved.

EX PARTE AMERICAN DISINFECTING CO., INC., Registration No. 362,154.

In a decision rendered September 29, 1948 (171 Ms. Dec. 4, 79 USPQ —), *Assistant Commissioner Daniels* denied a petition from the action of the Examiner of Trade-Marks refusing to enter an amendment presented pursuant to section 7(d) of the Trade-Mark Act of 1946, amending a registration of American Disinfecting Co., Inc., of Sedalia, Mo., of a trade-mark under the Trade-Mark Act of 1905. The mark as registered comprises a rectangular panel, in the upper righthand corner of which appears the word "ADCO," and in the lower righthand corner the words "American Disinfecting Co., Inc." The amendment submitted proposes to delete the border and substitute the words "Adco Inc." for "American Disinfecting Co., Inc." In the amended drawing as presented, the word "ADCO" appears near the top of the drawing, and the words "Adco Inc." in substantially larger lettering at the bottom.

It was held that the Examiner rightly refused entry of the amendment on the ground that "Adco Inc." is merely the corporate name of the registrant and is lacking in trade-mark significance.

It was held that the action of the Examiner in refusing to enter the amendment is regarded as proper both on the ground that as sought to be amended the mark would be dominated by nonregistrable subject matter and that the change sought would constitute a material alteration.

After noting that the specimens now presented do not show the two features of the mark, as sought to be amended, "ADCO" and "Adco Inc." as so related and connected as to serve as part of the same composite mark, since they have been arbitrarily selected from widely separated portions of a large label on which they appear to have no more relation to each other than each has to the other material appearing thereon, it was held that in addition to the grounds stated by the Examiner of Trade-Marks, the amendment should be refused on the ground that the specimens do not show the mark as presented.

It was noted that the denial is without prejudice to such other amendment as may be considered proper including the elimination of the border and of the corporate name should petitioner elect to take such action.

JUNIOR GUILD FROCKS, INC., *v.* PAGE & DIXON DRUG CO., INC. (WILLIAM SEMCO, ASSIGNEE, SUBSTITUTED), Cancellation No. 4616.

In a decision rendered September 29, 1948 (171 Ms. Dec. 7, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the petition of Junior Guild Frocks, Inc., of Chicago, Ill., to cancel the registration of Page & Dixon Drug Co., Inc. (William Semco, assignee, substituted), of Chicago, Ill., disclosing the words "Junior Guild," for cold cream, lipstick, cologne, rouge, face powder, skin lotion. Petitioner relied upon its ownership and prior use of "Junior Guild" as a trade-mark for women's clothing, and further alleged that respondent was not entitled to use of the mark because of the relationship existing between petitioner and respondent with respect to petitioner's preparations for the merchandising of cosmetics under that name.

As to two additional grounds set up by amendment of the petition, to the effect that the application for registration of the mark sought to be canceled was a fraudulent nullity because the applicant named therein had never sold any merchandise identifying it as the owner of the mark, and because respondent had never used the mark, it was held that the Examiner's action in holding that neither of these grounds was sufficient to justify cancellation is considered to be correct.

It was held that it seems apparent that a customer seeing "Junior Guild" dresses featured in a retail establishment and also seeing a bottle of "Junior Guild" cologne in the same establishment might associate it with the dresses and be confused into believing it came from the same source.

While under ordinary circumstances it would be held that clothing and cosmetics were goods having different descriptive properties, in this case respondent adopted the mark with full knowledge of the existence of good-will associated with Junior Guild's mark as applied to women's clothing, and of the fact that cosmetics were frequently merchandised by dress manufacturers through the same outlets and in connection with their sales of clothing, so that it can only be concluded that in adopting this mark with knowledge of this situation respondent as well as petitioner regarded the products as essentially falling within the same class and accordingly as goods of the same descriptive properties.

After noting that the Examiner of Trade-Mark Interferences regarded the goods of the parties as dissimilar but held that respondent is estopped to assert a right to the exclusive use of the mark as against petitioner, agreement was expressed with the conclusion reached by the Examiner of Interferences that respondent was not entitled to the use of the mark at the date of the application for registration therefore, and that his registration thereof should be canceled, although it was noted that while the conclusion above reached that the goods possess the same descriptive properties, and that there is reasonable likelihood of confusion between these parties may be, in effect, a finding that respondent was estopped to deny that the goods were the same under section 19 of the Trade-Mark Act of 1946, nevertheless, it is not necessary to base such conclusion on such a theory, and it has not been so considered.

The Assistant Commissioner, after noting that both parties refer to the lapse of time between the discussions between the parties to this proceeding and the time when Junior Guild actually started to manufacture cosmetics, respondent contending that such delay should constitute an estoppel against petitioner and petitioner contending that it was caused by wartime conditions, stated that he failed to see how it can have any bearing on this matter.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 26, 1948

[VOL. 615. NO. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 497,572. SHARPLES CHEMICALS INC., Philadelphia, Pa. Filed Mar. 2, 1946.

HYDRAMINE

FOR SYNTHETIC RESINS, FOR GENERAL USE IN THE INDUSTRIAL ARTS.
Claims use since July 17, 1945.

Ser. No. 515,200. FRANKLIN E. SMITH, South Dartmouth, Mass. Filed Jan. 2, 1947.

FESLIN

FOR FLAX FIBER.
Claims use since May 1945.

CLASS 2

RECEPTACLES

Ser. No. 514,250. CENTURY BURIAL VAULT CO., San Francisco, Calif. Filed Dec. 14, 1946.

CENTURY

FOR BURIAL VAULTS.
Claims use since Aug. 10, 1946.

Ser. No. 524,884. NORTON LABORATORIES INC., Lockport, N. Y. Filed June 26, 1947.

NOCLOR

FOR BOXES MADE OF MOLDED PLASTIC MATERIALS — NAMELY, JEWELRY BOXES, COMPACT BOXES, ROUGE BOXES, TALCUM POWDER BOXES, CREAM JARS, SALT SHAKERS, AND THE LIKE SOLD EMPTY TO THE TRADE.
Claims use since 1928.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 501,780. STAR CHEMICAL COMPANY, San Antonio, Tex. Filed May 9, 1946.

Starco

FOR WINDOW CLEANING COMPOUNDS AND TOILET BOWL CLEANING COMPOUNDS.
Claims use since 1931.

Ser. No. 515,517. SANA-SCENT COMPANY, Newburgh, N. Y. Filed Jan. 9, 1947.

SANA SCENT

No claim is made to the word "Scent" apart from the mark.
FOR CLEANSER AND DETERGENT HAVING INCIDENTAL PROPERTIES AS A WATER SOFTENING COMPOUND.
Claims use since Aug. 24, 1930.

Ser. No. 523,630. ERNEST E. VAN ALLSBURG, doing business as Van Chemical Company, Detroit, Mich. Filed June 5, 1947.

BRITEX

FOR SOAP, CLEANING COMPOUNDS FOR FABRICS, AND COMPOUNDS FOR REMOVING STAINS FROM FABRICS.
Claims use since Mar. 22, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,703. TAD CHEMICAL CO., Rochester, N. Y. Filed Aug. 1, 1946.

San-Can

Applicant disclaims any right to the exclusive use of letters "Can."
FOR CHEMICAL PREPARATIONS PARTICULARLY CHEMICALS FOR THE DESTRUCTION OF GARBAGE ODORS AND INSECTS.
Claims use since July 17, 1946.

Ser. No. 506,739. KAY DAUMIT, INC., Chicago, Ill., assignor to Kathryn, Inc., Chicago, Ill., a corporation of Illinois. Filed Aug. 2, 1946.

WILD AZALEA

The word "Azalea" is disclaimed apart from the mark.
FOR COLOGNE.
Claims use since July 24, 1945.

Ser. No. 510,077. CHARLES E. FREEMAN, doing business as F. B. Mfg. Co., Jacksonville, Fla. Filed Oct. 2, 1946.

FUNG-I-SOL

The term "Fung-I" is disclaimed apart from the mark as shown.
FOR MEDICINAL PREPARATION USED IN THE TREATMENT OF ATHLETE'S FOOT, RINGWORM, ITCHING DISCOMFORTS OF TETTER, IMPETIGO, HAND ITCH, SKIN IRRITATIONS AND FUNGUS INFECTIONS, AND INSECT BITES.
Claims use since Feb. 1, 1934.

Ser. No. 511,337. LINCOLN LABORATORIES, INCORPORATED, Decatur, Ill. Filed Oct. 23, 1946.

Aqueous Suspension of Androlin

No claim being made to the words "Aqueous Suspension of" apart from the mark shown.
FOR PREPARATION SOLD ONLY ON A PHYSICIAN'S PRESCRIPTION AND ADMINISTERED BY INTRA-MUSCULAR INJECTION, FOR THE TREATMENT OF PRIMARY EUNUCHOIDISM, BILATERAL INTRA-ABDOMINAL CRYPTORCHIDISM NOT RESPONDING TO CHORIONIC GONADOTROPIN, FROECHLICH'S SYNDROME ASSOCIATED WITH CRYPTORCHIDISM, PITUITARY DWARFISM, MALE CLIMACTERIC, IMPOTENCE FROM GLANDULAR CAUSES. CUSHING'S SYNDROME, ADDISON'S DISEASE, HYPO-PITUITARISM WITH SECONDARY HYPO-GONADISM IN OLD MEN.
Claims use since Mar. 17, 1944.

Ser. No. 511,339. LINCOLN LABORATORIES, INCORPORATED, Decatur, Ill. Filed Oct. 23, 1946.

Androlin

FOR MEDICINAL PREPARATION SOLD ONLY ON A PHYSICIAN'S PRESCRIPTION AND ADMINISTERED BY INTRA-MUSCULAR INJECTION FOR THE TREATMENT OF PRIMARY EUNUCHOIDISM, BILATERAL INTRA-ABDOMINAL CRYPTORCHIDISM NOT RESPONDING TO CHORIONIC GONADOTROPIN, FROECHLICH'S SYNDROME ASSOCIATED WITH CRYPTORCHIDISM, PITUITARY DWARFISM, MALE CLIMACTERIC, IMPOTENCE FROM GLANDULAR CAUSES, CUSHING'S SYNDROME, ADDISON'S DISEASE, AND HYPO-PITUITARISM WITH SECONDARY HYPO-GONADISM IN OLD MEN.
Claims use since Mar. 17, 1944.

Ser. No. 512,011. MCKINLEY LITHO SUPPLY COMPANY INC., Cincinnati, Ohio. Filed Nov. 4, 1946.

Kinlith

FOR LITHOGRAPHIC SUPPLY PRODUCTS—NAMELY, AN ALBUMEN PLATE COATING OR ALBUMEN IN SOLUTION, USED FOR COATING LITHOGRAPHIC SURFACE PLATES AND DEEP ETCHED PLATES; A PREPARATION FOR SENSITIZING THE ALBUMEN IN COATING SOLUTIONS OR SIMILAR PREPARATIONS, FOR RENDERING SAME LIGHT SENSITIVE IN A PHOTOGRAPHIC SENSE; A SOLUTION USED TO DESENSITIZE PLATES, HAVING THE PROPERTY OF REDUCING AFFINITY FOR GREASE; DEEP ETCH PRODUCTS; COMPRISING SENSITIZERS, DEVELOPERS AND ETCHING SOLUTIONS USED IN CARRYING OUT THE ACCEPTED STEPS IN THE PROCESS OF MAKING A DEEP ETCHED PLATE USED FOR PRINTING AND/OR LITHOGRAPHY; A MIXTURE COMPRISING SULPHUR AND SOAPSTONE USED FOR DUSTING AND DRYING BLANKETS USED IN PRINTING AND LITHOGRAPHY.
Claims use since June 10, 1936.

Ser. No. 512,287. PRO-PHY-LAC-TIC BRUSH COMPANY, Northampton, Mass. Filed Nov. 8, 1946.

Jewelite

FOR SHAMPOO.
Claims use since Apr. 5, 1940.

Ser. No. 515,008. WITCO CHEMICAL COMPANY, Chicago, Ill. Filed Dec. 28, 1946.

ZINSPER

FOR ZINC SOAP CONSISTING OF ZINC OXIDE AND RESIN AND FATTY ACIDS, USED AS A DISPERSING AND ACTIVATING AGENT FOR NATURAL AND SYNTHETIC RUBBER FORMULATIONS.
Claims use since March 1945.

Ser. No. 517,351. HIJOS DE N. LOPEZ CARO, Barcelona, Spain. Filed Feb. 12, 1947.

The words "Lopez Caro" and the outline of the label are disclaimed. The expression "La Carmela" is fanciful.
FOR PERFUMES AND HAIR DYE.
Claims use since 1924.

Ser. No. 524,944. HAROLD C. BLANKENBILLER, doing business as American Distilling & Manufacturing Co., East Hampton, Conn. Filed June 27, 1947.

Rayid

FOR WITCH HAZEL N. F.
Claims use since May 2, 1947.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 519,353. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Mar. 20, 1947.

P. D. Q.

FOR PRINTING INK.
Claims use since Oct. 18, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 513,064. WESTERN FIRE PROTECTION, INC., Los Angeles, Calif. Filed Nov. 22, 1946.

FIREMASTER

FOR FIRE FIGHTING EQUIPMENT—NAMELY, NOZZLES, COUPLINGS, FOG-APPLICATORS, FOG-NOZZLES, AND FOG-HEADS.
Claims use since Jan. 10, 1936.

Ser. No. 513,825. H. L. JUDD COMPANY, Wallingford, Conn. Filed Dec. 6, 1946.

KADMILITE

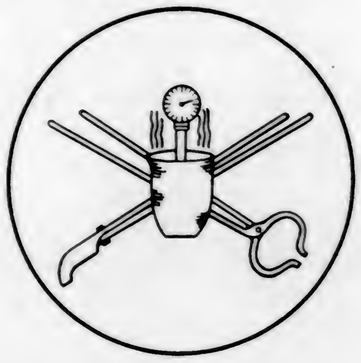
FOR HARDWARE—NAMELY, SCREW HOOKS AND SCREW EYES OF CADMIUM-PLATE FINISH, AS FOR HOUSEHOLD USE.
Claims use since Aug. 18, 1946.

Ser. No. 514,337. RICHARD J. FUITE, San Francisco, Calif. Filed Dec. 15, 1946.

PANELDUCT

FOR STEEL AND COPPER TUBING.
Claims use since Nov. 15, 1946.

CLASS 14



METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 500,484. NATIONAL CAST PRODUCTS COMPANY, Providence, R. I., assignor to National Cast Products Company, Inc., Providence, R. I., a corporation of Rhode Island. Filed Apr. 18, 1946.

NATIONAL CAST PRODUCTS

The words "Cast Products" are disclaimed apart from the mark.
FOR UNFINISHED OR PARTLY FINISHED PRECISION CASTINGS FOR JEWELERS, SILVERSMITHS, AND MODEL MAKERS.
Claims use since Mar. 15, 1946.

Ser. No. 500,555. NATIONAL CAST PRODUCTS COMPANY, Providence, R. I., assignor to National Cast Products Company, Inc., Providence, R. I., a corporation of Rhode Island. Filed Apr. 19, 1946.

FOR UNFINISHED CASTINGS OF PRECIOUS AND NON-PRECIOUS METALS.
Claims use since Mar. 15, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 521,295. SUN OIL COMPANY, Philadelphia, Pa. Filed Apr. 24, 1947.

CIRCO

FOR LUBRICATING OIL.
Claims use since October 1924.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 516,393. JAMES H. H. BRADFORD, doing business as The Howe Company, Branford, Conn. Filed Jan. 27, 1947.

KEEPKAN

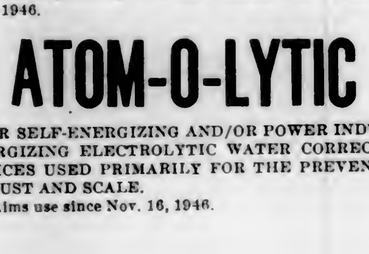
FOR LIQUID CLEANER FOR PAINT BRUSHES.
Claims use since Feb. 10, 1941.

Ser. No. 517,958. CALRESIN CORPORATION, Culver City, Calif. Filed Feb. 24, 1947.

PLASTIGLAZE

FOR TRANSPARENT, AIR DRYING, IMPREGNATING PLASTIC COATING COMPOSITION FOR USE AS A SURFACE FINISH FOR SUCH SURFACES AS PLASTIC, WOOD, CARDBOARD, AND VARIOUS COMPOSITION BOARDS.
Claims use since Dec. 27, 1945.

CLASS 17



TOBACCO PRODUCTS

Ser. No. 511,438. AMB-A-TIP CIGAR COMPANY, Baltimore, Md. Filed Oct. 25, 1946.

EARL MARSHAL

FOR CIGARS.
Claims use since 1917.

Ser. No. 525,624. P. LORILLARD COMPANY, New York, N. Y. Filed July 2, 1947.

The trade-mark consists of the portrait of the late James G. Blaine.
FOR CIGARS.
Claims use since 1897.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 497,900. UNITED-CARR FASTENER CORPORATION, Cambridge, Mass. Filed Mar. 8, 1946.

THE DOT LINE

The word "Line" is disclaimed apart from the mark.
FOR VARIOUS COMPONENT PARTS OF ELECTRICAL AND RADIO APPARATUS—NAMELY, LAMP SOCKETS, TUBE SOCKETS, SPACER SLEEVES, GROUNDING BUSHINGS, VIBRATOR CLIPS, GROUNDING CUPS, SHOCKPROOF MOUNTING CUPS, TERMINALS, CONNECTORS, TERMINAL STRIPS AND CONNECTORS, SWITCHES, WIRING CLIPS, CONDUCTOR HARNESS AND HARNESS CLIPS, FUSE MOUNTINGS, TERMINAL PLUGS, CONNECTOR PLUGS, PLUG BUTTONS, MOUNTING CLIPS AND LUGS FOR SHIELD CANS, CONDENSERS, RESISTORS, COILS AND OTHER CIRCUIT COMPONENTS, AND PANEL FASTENERS.
Claims use since May 13, 1913.

Ser. No. 514,518. EDGAR M. BUTLER, doing business as Butler Engineering Co., New Orleans, La. Filed Dec. 19, 1946.

ATOM-O-LYTIC

FOR SELF-ENERGIZING AND/OR POWER INDUCED ENERGIZING ELECTROLYTIC WATER CORRECTION DEVICES USED PRIMARILY FOR THE PREVENTION OF RUST AND SCALE.
Claims use since Nov. 16, 1946.

Ser. No. 525,850. ILLINOIS CONDENSER CO., Chicago, Ill. Filed July 3, 1947.

"ILLINI-HYCAP"

FOR ELECTRICAL CONDENSERS.
Claims use since April 1937.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 508,404. AMERICAN METALCRAFT CORPORATION, Detroit, Mich. Filed Sept. 3, 1946.

No claim is made to the words "Detroit" and "American Metalcraft Corp." apart from the mark as shown.
FOR WHEELED TOY VEHICLES—NAMELY, WAGONS AND SCOOTERS.
Claims use since Mar. 10, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 507,314. EDWARD J. HERBERT, doing business as Edroy Products Company, New York, N. Y. Filed Aug. 13, 1946.

REFLECTOGRAPH

FOR CAMERA ATTACHMENTS WHICH PRODUCE AN ARTIFICIAL REFLECTION IN THE IMAGE.
Claims use since Feb. 19, 1946.

Ser. No. 519,107. UNIVERSAL CAMERA CORPORATION, New York, N. Y. Filed Mar. 15, 1947.

Tonemaster

FOR 8 MM. AND 16 MM. SOUND MOTION PICTURE PROJECTORS FOR BUSINESS, SCHOOL, AND HOME USE.
Claims use since Oct. 15, 1946.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 513,199. PAKULA AND COMPANY, Chicago, Ill. Filed Nov. 25, 1946.

FOR JEWELRY FOR PERSONAL WEAR—NAMELY, EXPANSION, CHARM, IDENTIFICATION AND WATCH BRACELETS, ANKLETS, CHARMS, FINGER RINGS, ORNAMENTAL PINS, EARRINGS, LOCKETS, NECK CHAINS, PEARLS, AND ROSARIES AND COMPACTS MADE WHOLLY OR IN PART OF PRECIOUS METAL.
Claims use since January 1941.

Ser. No. 514,202. JACQUES KREISLER MANUFACTURING CORPORATION, North Bergen, N. J. Filed Dec. 13, 1946.

Sir-name

Applicant hereby disclaims the exclusive right to the use of the word "Name" except as used in association with the other features of the mark.
FOR KEY CHAINS MADE OF PRECIOUS OR COMBINATION OF PRECIOUS AND BASE METAL.
Claims use since Nov. 22, 1946.

Ser. No. 516,538. JOHN M. CROWNOVER, Tulsa, Okla. Filed Jan. 29, 1947.

Colornapin

FOR CLASPS OR PINS OF PRECIOUS METAL SUCH AS SILVER, GOLD, OR PLATINUM, AND ADAPTED FOR SECURING SHIRT COLLARS.
Claims use since Nov. 1, 1946.

Ser. No. 518,576. E. S. WINSTAN CO., New York, N. Y. Filed Mar. 5, 1947.

WINSTAN
Birthstone-Cross

No claim is made to the words "Birthstone-Cross" apart from the mark shown on the drawing.
FOR NECKLACES AND RELIGIOUS ORNAMENTS FOR THE SAME, ALL MADE OF PRECIOUS METALS.
Claims use since Dec. 16, 1946.

Ser. No. 519,232. STAR JEWELRY CO., INC., New York, N. Y. Filed Mar. 18, 1947.

Starjule

FOR COSTUME JEWELRY—NAMELY, NECKLACES, BRACELETS, BROOCHES, EARRINGS, CHATELAINES, CLIPS, LOCKETS, AND PEARL BEADS.
Claims use since June 15, 1946.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 487,244. COLUMBIA PRODUCTS CORPORATION, Brooklyn, N. Y. Filed Aug. 18, 1945.

Piccadilly

FOR POWDER PUFFS.
Claims use since Aug. 7, 1945.

CLASS 32

FURNITURE AND UPHOLSTERY

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 503,460. NORTHERN SIGNAL COMPANY, INC., Milwaukee, Wis. Filed Apr. 12, 1948. Under section 2f of the act of 1946.

ELECTRO-LINE

FOR ELECTRIC FENCE CHARGERS, ELECTRIC FENCE INSULATORS, ELECTRIC FENCE FASTENERS, ELECTRIC FENCE CONNECTION LEADS, ELECTRIC FENCE TERMINALS AND ELECTRIC FENCE GATES.
Claims use since Mar. 1, 1939.

Ser. No. 530,089. MARKEL ELECTRIC PRODUCTS, INC., Buffalo, N. Y. Filed July 31, 1947. Under section 2f of the act of 1946.

HEETAIRE

Applicant claims ownership of registration No. 242,028.
FOR ELECTRIC AIR HEATERS FOR DOMESTIC USE.
Claims use since Feb. 5, 1927.

Ser. No. 530,815. THE GLOBE TOOL & ENGINEERING COMPANY, Dayton, Ohio. Filed Aug. 8, 1947.

GLOBE

FOR ELECTRIC MOTORS.
Claims use since Apr. 9, 1931.

Ser. No. 530,997. WESTINGHOUSE ELECTRIC CORPORATION, East Pittsburgh, Pa. Filed Aug. 9, 1947.

ELECTRONIC FEATHER

No claim is made to the word "Electronic" apart from the mark.
FOR ELECTRIC PHONOGRAPHS, RADIO-PHONOGRAPH COMBINATIONS AND PARTS OF ELECTRIC PHONOGRAPHS AND RADIO-PHONOGRAPHS.
Claims use since Mar. 20, 1947.

Ser. No. 532,942. LIGHTOLIER, INCORPORATED, New York, N. Y. Filed Aug. 30, 1947.

X

FOR ELECTRIC LAMPS—NAMELY, FLOOR LAMPS, BRIDGE LAMPS, BED LAMPS, TABLE LAMPS, AND ELECTRIC LIGHTING FIXTURES—NAMELY, CHANDELIERS, CEILING LIGHTS, PENDANT LIGHTS, DROP LIGHTS AND WALL BRACKET LIGHTS EQUIPPED WITH INCANDESCENT OR FLUORESCENT SOURCES OF ILLUMINATION.
Claims use since 1940.

Ser. No. 534,829. STANDARD ELECTRIC COMPANY, INC., San Antonio, Tex. Filed Sept. 17, 1947. Under section 2f of the act of 1946.

RELIABLE

FOR STORAGE BATTERIES.
Claims use since Nov. 1, 1918.

Ser. No. 536,458. STANDARD TRANSFORMER CORPORATION, Chicago, Ill. Filed Oct. 1, 1947.

STANCOR

Applicant claims ownership of registrations Nos. 355,367, 355,368, and 355,369.
FOR FIXED AND VARIABLE TRANSFORMERS—NAMELY, MINIATURE TRANSFORMERS; REACTORS—NAMELY, AUDIO AND POWER REACTORS FOR RADIO, POWER PACKS OF THE DRY METALLIC VACUUM OR GASEOUS TUBE TYPE; TRANSMITTERS—NAMELY, RADIO FREQUENCY LOW POWER TRANSMITTERS FOR AMATEUR AND INDUSTRIAL USES, AMPLIFIERS, AMPLIFIER KITS; VOLTAGE ADJUSTING AND REGULATING EQUIPMENT—NAMELY, MANUALLY OPERATED AUTO TRANSFORMERS AND VOLTAGE ADJUSTERS AND ELECTRONIC CONTROL EQUIPMENT—NAMELY, AUTO TRANSFORMERS FOR USE WITH MANUALLY OPERATED SWITCHES FOR ADJUSTMENT OF AMPERAGE COUPLED WITH VOLTAGE REGULATORS AND INDICATORS.
Claims use since Sept. 1, 1930.

Ser. No. 537,260. WEBSTER ELECTRIC COMPANY, Racine, Wis. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

Webster

Applicant claims ownership of registrations Nos. 269,791 and 283,297.
FOR AUDIO FREQUENCY AMPLIFIERS COMPRISING ASSEMBLED UNITS FOR AMPLIFYING ELECTRIC SIGNALS, AUDIO FREQUENCY TRANSFORMERS, CHOKE COILS, ELECTRIC PICK-UP TONE ARMS, ELECTRIC PICK-UP VOLTAGE CONTROLS, ELECTRICAL SOCKETS AND PLUGS, ELECTRICAL PHONOGRAPH PICK-UPS, POWER TRANSFORMERS, HIGH VOLTAGE IGNITION TRANSFORMERS, AND ENERGIZING TRANSFORMERS FOR ELECTRIC SIGNS.
Claims use since July 22, 1909.

Ser. No. 540,017. AMERICAN ELECTRICAL CORPORATION OF MASSACHUSETTS, Boston, Mass. Filed Nov. 4, 1947.

AMLEC

FOR ELECTRIC ALARM BELL AND CONTROL INSTRUMENTS AND PARTS THEREOF FOR BURGLAR AND FIRE ALARM SYSTEMS.
Claims use since Aug. 19, 1947.

Ser. No. 540,055. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Nov. 4, 1947.

GALVOPAK

FOR PACKAGE CONTAINING A GALVANICALLY ACTIVE METAL ANODE ENCASED IN AN ELECROLYTICALLY CONDUCTIVE BACKFILL COMPOSITION USEFUL IN THE CATHODIC PROTECTION OF UNDERGROUND FERROUS METAL STRUCTURES.

DRW

FOR WIRE BARS, BARS, INGOT BARS, INGOTS, AND CAKES OF GOLD, SILVER, COPPER.
Claims use since about the year 1904.

Reg. No. 327,777. Registered Sept. 3, 1935. OHIO FERRO-ALLOYS CORPORATION, Canton, Ohio, a corporation of Ohio. Republished by registrant.

DEPENDABILITY PHILO BRAND QUALITY SERVICE

The words "Brand," "Quality," "Service," and "Dependability" are disclaimed apart from the mark as shown.

FOR FERRO-ALLOYS—NAMELY, FERRO-SILICON, ALL GRADES; FERRO-CHROME; FERRO-MANGANESE; AND SILICO-MANGANESE.
Claims use since Apr. 23, 1935.

Reg. No. 374,942. Registered Jan. 30, 1940. MARTIN KURZER, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

BRONZOCHROM

FOR METAL ALLOYS IN ROD AND WIRE FORM USED IN WELDING AND FOR CORE SOLDER.
Claims use since 1937.

Reg. No. 403,413. Registered Sept. 21, 1943. OHIO FERRO-ALLOYS CORPORATION, Canton, Ohio, a corporation of Ohio. Republished by registrant.

BOROSIL

FOR FERRO-ALLOYS—NAMELY, AN ALLOY OF BORON, SILICON, AND IRON.
Claims use since July 28, 1942.

Reg. No. 413,659. Registered May 8, 1945. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

CASTOLIN EUTECTIC

The word "Eutectic" is disclaimed apart from the mark as shown.

FOR METALLIC WELDING, BRAZING, AND SOLDERING ALLOYS IN THE FORM OF ELECTRODES AND RODS COATED WITH OR HAVING INCORPORATED THEREIN FLUX SUBSTANCE.
Claims use since June 1942.

CLASS 15

OILS AND GREASES

Reg. No. 164,498. Registered Feb. 20, 1923. WILSHIRE OIL COMPANY, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

RADIO

FOR GASOLINE, ENGINE DISTILLATE, FURNACE DISTILLATE, KEROSENE, BENEZINE, GAS OIL, FUEL OIL, LUBRICATING OILS, LUBRICATING GREASES, AND CRUDE OIL AND DIESEL ENGINE DISTILLATE.
Claims use since June 15, 1922.

Reg. No. 194,001. Registered Jan. 13, 1925. WILSHIRE OIL COMPANY, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

WILSHIRE WILSHIRE OIL CO. INC. WILSHIRE OIL CO. INC. LOS ANGELES, CAL. U.S.A.

The use of the geographical term "Los Angeles, Cal., U. S. A.," is disclaimed apart from the mark as shown.

FOR PETROLEUM PRODUCTS—VIZ., GASOLINE, ENGINE DISTILLATE, STOVE DISTILLATE, FURNACE DISTILLATE, DIESEL-ENGINE DISTILLATE, KEROSENE, BENZINE, GAS OIL, FUEL OIL, LUBRICATING OILS, LUBRICATING GREASES, AND CRUDE OIL.
Claims use since 1919.

Reg. No. 290,070. Registered Dec. 22, 1931. WILSHIRE OIL COMPANY, INC., Vernon, Calif., a corporation of California. Republished by registrant, present address Los Angeles, Calif.

LUCKY STRIKE GASOLINE

The word "Gasoline" is disclaimed apart from the mark as shown.

FOR GASOLINE, KEROSENE, DISTILLATE, FUEL OIL, BOTH THE DISTILLATE AND THE FUEL OIL BEING INTENDED FOR USE AS MOTOR FUEL AND FURNACE FUEL, AND LUBRICATING OILS AND GREASES.
Claims use since Feb. 24, 1931.

Reg. No. 384,487. Registered Jan. 21, 1941. WILSHIRE OIL COMPANY, INC., Los Angeles, Calif., a corporation of California. Republished by registrant.

ECONOMY

FOR GASOLINE.
Claims use since July 15, 1919.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 78,513. Registered June 21, 1910. THE HANNA PAINT MFG. CO., Columbus, Ohio, a corporation of Ohio. Republished by registrant.

GREEN SEAL

FOR LIQUID PAINT.
Claims use since about October 1887.

Reg. No. 106,217. Registered Oct. 19, 1915. CLINTON METALLIC PAINT COMPANY, Franklin Springs, N. Y., a corporation of New York. Republished by registrant, present address Clinton, N. Y.

CLINTON METALLIC PAINT CO. TRADE Clinton MARK CLINTON, N.Y.

The words "Clinton Metallic Paint Co.," "Clinton, N. Y.," and "Trade-Mark" are disclaimed apart from the mark as shown.
FOR MIXED PAINTS, DRY PAINTS, PAINT-COLORS AND PAINT-PIGMENTS.
Claims use since Mar. 1, 1914.

Reg. No. 196,874. Registered Mar. 31, 1925. WAUKEGAN CHEMICAL COMPANY, North Chicago, Ill. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

BREVOLITE

FOR LACQUERS AND LACQUER ENAMELS.
Claims use since May 21, 1919.

Reg. No. 197,335. Registered Apr. 14, 1925. CELLULOID ZAPON COMPANY, Wilmington, Del., now by change of name The Zapon Company. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

ZAPON

FOR READY-MIXED PAINTS AND ENAMELS, PAINT COLORS, VARNISHES, LACQUERS AND THINNERS FOR PAINTS AND ENAMELS, PAINT-LIKE COMPOUNDS FOR LACQUERING AND ENAMELING AND THINNERS THEREFOR.
Claims use since Aug. 11, 1891.

Reg. No. 221,230. Registered Nov. 23, 1926. THE HANNA PAINT MFG. CO., Columbus, Ohio., a corporation of Ohio. Republished by registrant.

CHINO-GLOSS

The word "Gloss" is disclaimed apart from the mark as shown.
FOR PAINT ENAMEL.
Claims use since March 1920.

Reg. No. 221,233. Registered Nov. 23, 1926. THE HANNA PAINT MFG. CO., Columbus, Ohio., a corporation of Ohio. Republished by registrant.

SATINOID

FOR READY-MIXED PAINTS.
Claims use since October 1909.

Reg. No. 224,702. Registered Mar. 1, 1927. THE HANNA PAINT MFG. CO., Columbus, Ohio., a corporation of Ohio. Republished by registrant.

Stippelen

FOR READY MIXED WALL FINISH PAINTS.
Claims use since February 1917.

Reg. No. 227,758. Registered May 17, 1927. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by Registrant.

LINOTEX

FOR READY-MIXED PAINTS.
Claims use since July 28, 1925.

Reg. No. 283,040. Registered May 12, 1931. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by Registrant.

DURATINT

FOR FLAT WALL PAINT.
Claims use since Mar. 15, 1928.

Reg. No. 298,060. Registered Oct. 11, 1932. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by Registrant.

AAA1

FOR VARNISH.
Claims use since Mar. 8, 1932.

Reg. No. 310,786. Registered Mar. 6, 1934. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by Registrant.

SEMI-SHINE

The words "Semi-Shine" are disclaimed apart from the mark as shown.
FOR PAINT ENAMEL.
Claims use since Sept. 29, 1933.

Reg. No. 331,820. Registered Jan. 21, 1936. LEE GOODMAN, doing business as Sta-Wax Products Company, Mangum, Okla. Republished by Tirey Hardin, Clinton, Okla.

Sta-Wax

The word "Wax" is disclaimed apart from the mark as shown.
FOR FURNITURE POLISH.
Claims use since July 1, 1933.

Reg. No. 390,010. Registered Sept. 2, 1941. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

BROADCAST GL

FOR PAINT ENAMEL.
Claims use since Feb. 4, 1941.

SLATITE

FOR LACQUERS AND PAINT ENAMELS.
Claims use since Aug. 10, 1937.

Reg. No. 421,704. Registered June 11, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

PIONEERS IN PROTECTION
M&WCo
1876

The word "Protection" is disclaimed apart from the mark as shown.
FOR PAINTS, IN PASTE AND READY MIXED FORM, LACQUERS AND PAINT ENAMELS.
Claims use since 1904.

Reg. No. 421,780. Registered June 18, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

PRISMLAC

FOR CRYSTALLIZING LACQUERS.
Claims use since Feb. 15, 1930.

Reg. No. 422,318. Registered July 16, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

DURVIN

FOR COATING COMPOSITIONS CONTAINING VINYL RESINS.
Claims use since July 1, 1934.

Reg. No. 422,319. Registered July 16, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

RAYDUR

FOR ENAMELS CONTAINING SYNTHETIC RESINS AND VARNISHES.
Claims use since Apr. 1, 1940.

Reg. No. 425,243. Registered Nov. 12, 1946. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

STIPPLETEX

FOR READY-MIXED PAINT.
Claims use since March 1926.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 332,165. Registered Feb. 4, 1936. METROPOLITAN CIGAR CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CHICAGO MOTOR CLUB

The representation of the star is disclaimed apart from the mark as shown.
FOR CIGARS.
Claims use since Dec. 20, 1922.

CLASS 19

VEHICLES

Reg. No. 218,521. Registered Sept. 28, 1926. MOTOR PRODUCTS CORPORATION, Detroit, Mich., a corporation of New York. Republished by registrant.

DIAMOND

FOR AUTOMOBILE ACCESSORIES, COMPRISING RADIATOR FRONTS, WINDOW LIFTS, HINGES, LOCKS, DOVETAILS, EXHAUST PIPES, FOOT ACCELERATORS, MUFFLERS, RADIATORS, WINDSHIELDS, WINDSHIELD VISORS, INSTRUMENT PANELS, MOLDING, AND TUBING FOR USE IN CONNECTION WITH MOTOR-PROPELLED VEHICLES.
Claims use since Feb. 9, 1925.

Reg. No. 317,269. Registered Sept. 18, 1934. MOTOR PRODUCTS CORPORATION, Detroit, Mich., a corporation of New York. Republished by registrant.

CONTROLOAIRE

FOR VEHICLE WINDOW VENTILATING APPARATUS.
Claims use since about Dec. 20, 1933.

Reg. No. 388,826. Registered July 15, 1941. DIFFERENTIAL WHEEL CORPORATION, Detroit, Mich., a corporation of Delaware. Republished by registrant.

DIFFERENTIAL
WHEELS

The words "Differential Wheels" are disclaimed apart from the mark as shown.
FOR VEHICLE WHEELS, PARTICULARLY INDEPENDENTLY ROTATABLE DUAL WHEELS.
Claims use since Feb. 6, 1939.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 234,113. Registered Oct. 18, 1927. JAMBOR TOOL & STAMPING CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Bull Dog

FOR AUTOMOBILE ACCESSORIES — NAMELY, SPARK TIMERS AND AUTOMOBILE ELECTRIC-WIRING SETS.
Claims use since Dec. 11, 1925.

Reg. No. 269,435. Registered Apr. 8, 1930. DELTA ELECTRIC COMPANY, Marion, Ind., a corporation of Indiana. Republished by registrant.

BUDDY

FOR ELECTRIC LANTERNS.
Claims use since about Oct. 21, 1929.

Reg. No. 281,286. Registered Mar. 17, 1931. NEW JERSEY WOOD FINISHING COMPANY, Woodbridge, N. J., a corporation of New Jersey. Republished by registrant.

VARTEX
THE PEAK OF QUALITY

The words "The Peak of Quality" are disclaimed apart from the mark as shown.
FOR VARNISHED CAMBRIC FABRICS AND TAPES AND VARNISHED PAPERS TO BE USED IN THE INSULATION OF CABLES, MOTORS, GENERATORS, AND SIMILAR ELECTRICAL APPARATUS.
Claims use since July 21, 1930.

Reg. No. 322,510. Registered Mar. 12, 1935. DELTA MANUFACTURING COMPANY, Milwaukee, Wis. Republished by Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania.

Delta

FOR ELECTRIC MOTORS AND ELECTRIC BENCH GRINDERS.
Claims use since Sept. 15, 1931.

Reg. No. 365,023. Registered Feb. 21, 1939. INTERNATIONAL APPLIANCE CORPORATION, Brooklyn, N. Y., a corporation of New York. Republished by registrant.

BROILKING

FOR ELECTRIC COOKING STOVES.
Claims use since Mar. 15, 1938.

Reg. No. 390,979. Registered Oct. 14, 1941. THE FAIRFIELD ENGINEERING COMPANY, Marion, Ohio, a corporation of Ohio. Republished by registrant.

COALIMIT

FOR ELECTRICAL CONTROL SWITCHES.
Claims use since Nov. 20, 1940.

Reg. No. 428,532. Registered Mar. 25, 1947. THE TANGLEFOOT COMPANY, Grand Rapids, Mich., a corporation of Michigan. Republished by registrant.

DIFUSOLIER

FOR ELECTRICALLY HEATED ATOMIZER FOR SPRAYING LIQUID.
Claims use since Feb. 20, 1946.

Reg. No. 433,014. Registered Sept. 23, 1947. WARD LEONARD ELECTRIC COMPANY, Mount Vernon, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for the color red.
FOR ELECTRIC RHEOSTATS, ELECTRIC ILLUMINATION CONTROL APPARATUS FOR AFFECTING THE CONNECTIONS OF ELECTRIC LIGHT CIRCUITS AND THE CURRENT AND VOLTAGE, AND OF ELECTRIC LIGHTING DEVICES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Apr. 10, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 281,138. Registered Mar. 10, 1931. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

FOR POCKET BILLIARD BALLS.
Claims use since Aug. 14, 1930.

Reg. No. 304,248. Registered June 27, 1933. HOWARD B. JONES, Chicago, Ill. Republished by Northern Signal Company, Inc., Milwaukee, Wis., a corporation of Wisconsin.

HOOT-NANNY

FOR TOY DRAWING OUTFITS.
Claims use since Dec. 8, 1932.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 46,548. Registered Sept. 26, 1905. COES WRENCH COMPANY, Worcester, Mass. Republished by The Billings & Spencer Company, Hartford, Conn., a corporation of Connecticut.

"KNIFE_HANDLE"

FOR ADJUSTABLE SCREW WRENCHES.
Claims use since February 1885.

Reg. No. 81,272. Registered Mar. 21, 1911. THE HEMPHILL MANUFACTURING COMPANY, Central Falls, R. I. Republished by Hemphill Company, Pawtucket, R. I., a corporation of Massachusetts.

BANNER

FOR AUTOMATIC STOCKING-KNITTING MACHINERY.
Claims use since Apr. 1, 1906.

Reg. No. 130,638. Registered May 4, 1920. THE BILLINGS & SPENCER COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

THE BILLINGS & SPENCER CO.

FOR TOOLS BLANKS AND FINISHED TOOLS—NAMELY, ALL KINDS AND TYPES OF THE FOLLOWING GOODS; WRENCHES, PLIERS, SCREWDRIVERS, AWLS AND REAMERS, CHISELS, COTTERPIN TOOLS, PUNCHES, HAMMERS, DRIFTS, WRENCH-SOCKETS, DOGS, CLAMPS, REAMER-HOLDERS, NURLING-TOOLS, VISES, ANVILS, TAPS, KNIVES, FILES, TACK-PULLERS, BELT SHIFTERS, HANDLES, AND ALL COMBINATIONS OF SUCH TOOLS.
Claims use since December 1912.

Reg. No. 130,843. Registered May 4, 1920. NATIONAL TRANSIT PUMP & MACHINE COMPANY, Oil City, Pa., a corporation of Pennsylvania. Republished by registrant.

TRANSIT

FOR STEAM-DRIVEN PUMPS FOR ALL CLASSES OF INDUSTRIAL SERVICE AND CONDENSERS FOR USE IN CONNECTION WITH SAME, BELT-DRIVEN AND GEAR-DRIVEN PUMPS FOR ALL CLASSES OF INDUSTRIAL SERVICE, OIL ENGINES, GAS ENGINES, AIR COMPRESSORS, GAS COMPRESSORS, METAL WORKING MILLING MACHINES, PIPE TONGS, PIPE WRENCHES, PIPE STOCKS, PIPE CUTTERS AND PIPE DIES.
Claims use since May 1, 1919.

Reg. No. 159,364. Registered Sept. 26, 1922. GUILD PRODUCTS CORPORATION, Philadelphia, Pa. Republished by Stationers' Guild of America, Philadelphia, Pa., a corporation of Pennsylvania.

Guild

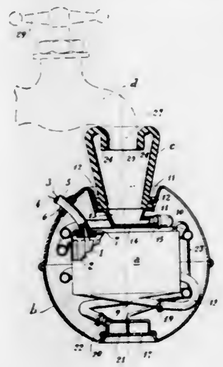
REISSUES

OCTOBER 26, 1948



23,046
CORE FOR YARN OR THREAD PACKAGES AND METHOD OF MAKING THE SAME
Joseph E. A. Blanchet, Mystic, Conn., assignor to Sonoco Products Company, Hartsville, S. C., a corporation of South Carolina
Original No. 2,288,966, dated July 7, 1942, Serial No. 368,742, December 5, 1940. Application for reissue April 26, 1947, Serial No. 744,260
9 Claims. (Cl. 93—94)

7. A core for a yarn or thread package comprising a tubular portion the outer surface of which is adapted to receive and support the inner windings of a thread or yarn package and said core being made of a sufficiently flexible material to be turned in to provide a spindle-engaging sleeve portion within and adjacent one end of said tubular portion, said tubular and sleeve portions being concentric and adjacent outer ends thereof being connected by a web portion which is integral with both, the said spindle-engaging sleeve having an inner spindle-engaging surface and being of sufficient length, measured axially of the tube, adequately to support the core, and any thread package mounted thereon, upon the spindle, and to maintain driving engagement with the spindle during rotation thereof.

9. The method of forming a core for a yarn or thread package which comprises forming a tubular member of a sufficiently flexible material to be turned in, the outer surface of which is adapted to receive and support the inner windings of a thread or yarn package, inturning one end thereof to form a spindle-engaging sleeve portion of reduced diameter within and integral with the outer or thread package supporting portion, and thereafter imparting a spindle gripping frusto-conical surface to said inturned end by thrusting a frusto-conical die axially into the same from the inner end while supporting the outer wall surface of the outer portion of the tube.

23,047
ELECTRIC HEATER
Geraldo Cyro Wicks, New York, N. Y.
Original No. 2,400,618, dated May 21, 1946, Serial No. 527,042, March 18, 1944. Application for reissue November 20, 1947, Serial No. 788,331. In Argentina February 5, 1944
12 Claims. (Cl. 219—39)

1. Improvements in electric heaters, of the type comprising a general outer casing, enclosing an electrically insulated heating compartment wherein the inflowing water is placed in contact with the electric circuit, characterized by that the inlet nozzle, the apparatus and the entrance of the heating compartment are in communication one with another by means of a coil of dielectric material, while the outlet of said compartment and the discharge opening or real outlet of the apparatus also communicate one with another by means of another coil of dielectric material, both coils being housed within the said outer casing of the apparatus and surrounding the heating compartment.

PLANT PATENTS

GRANTED OCTOBER 26, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

809

ROSE PLANT

Roy L. Byrum, Richmond, Ind., assignor to Joseph H. Hill Company, Richmond, Ind., a corporation of Indiana

Application April 28, 1947, Serial No. 744,455

1 Claim. (Cl. 47—61)

A new and distinct variety of hybrid tea rose plant characterized as to novelty by its good growth habit, its good disease-resistant foliage, and the large size and color of its very double blooms, substantially as shown and described.

PATENTS

GRANTED OCTOBER 26, 1948

2,452,029

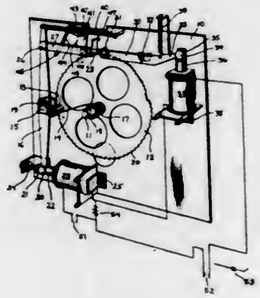
ADDITION PRODUCTS FROM ACRYLIC ESTERS

Herman A. Bruson, Rydal, and Warren D. Niederhauser, Philadelphia, Pa., assignors, by mesne assignments, to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application June 21, 1945, Serial No. 600,851

20 Claims. (Cl. 260—405)

1. Monomeric addition products of (*a*) one molecular equivalent of an ester of acrylic acid and a monohydric alcohol and (*b*) one molecular equivalent of a compound selected from the class consisting of drying oil fatty acids having conjugate olefinic bonds and esters thereof.



2,452,030

STEP-UP MECHANISM

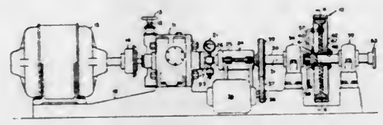
Edward H. Hughes, Chicago, Ill., assignor to Exhibit Supply Company, Chicago, Ill., a corporation of Illinois

Application October 4, 1946, Serial No. 701,362

4 Claims. (Cl. 74—142)

1. A step-up mechanism in which there is a spring rotated ratchet wheel, a step-up lever, a latch lever and electro-magnetic means for operating said levers, a device for releasably latching said step-up lever and latch in an inoperative position with respect to the wheel, comprising a pivoted lever having a portion thereof adapted to engage beneath a portion of the latching lever and another portion adapted to be engaged by a portion of the step-up lever, means for supporting said lever for said pivotal movement, and spring means for pivoting said lever in a direction to dispose the first named portion thereof in latched position with respect to the latch lever, said latch lever having a portion adapted to engage a portion of said step-up lever to latch said step-up lever from engagement with the wheel when said first named portion of said member is disposed in latched position beneath the portion of said latch lever.

2,452,031



TORSIONAL OSCILLATION GENERATOR

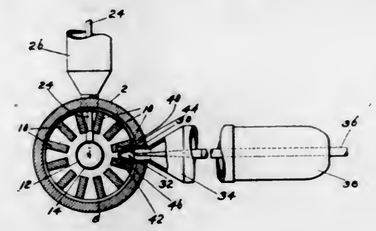
Ralph B. Allnutt, Glen Echo Heights, Md., and Raymond T. McGoldrick, Brooklyn, N. Y.

Application August 8, 1946, Serial No. 689,131

3 Claims. (Cl. 73—1)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

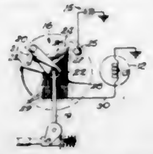
1. In a torsional oscillation generator a driven shaft, a flywheel element, a weight element, one of said elements being fastened to the shaft, the other of said elements being mounted for oscillation relative to the first-mentioned one, means rotating the shaft at any selected speed, a hydraulic motor for oscillating the weight relative to the flywheel, a variable displacement pump having its output connected to said motor, and means operating the pump at any selected speed.



2,452,032

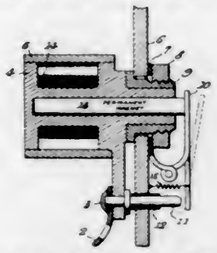
ELECTRON DISCHARGE DEVICE OF THE MAGNETRON TYPE

Homer G. Anderson, Waban, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware



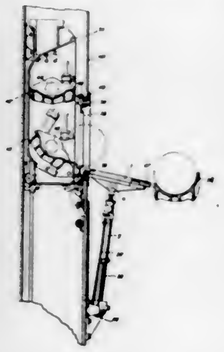
Application June 10, 1944, Serial No. 539,722

7 Claims. (Cl. 315—39)



1. An electron discharge device comprising an envelope containing a cathode and an anode, said anode comprising a pair of electron-receiving portions adjacent said cathode, and a cavity resonator interconnecting said pair of electron-receiving portions, the opposed inner surfaces of said cavity resonator being each provided with a recess the longitudinal axis of which lies in a plane perpendicular to the longitudinal axis of said cavity resonator, and an output coupling loop located within said cavity resonator and between said recesses.

2,452,033
TRACTOR TRAILER BRAKE CONTROL
Frank G. Born, Beloit, Wis., assignor to Warner Electric Brake Manufacturing Company, South Beloit, Ill., a corporation of Illinois
Application April 16, 1945, Serial No. 588,675
7 Claims. (Cl. 201—48)

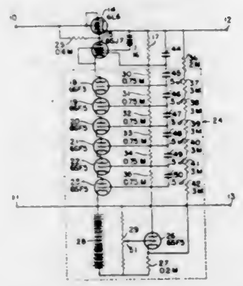


1. The combination of an elongated rod, a piston on one end of the rod, a cylinder slidably supporting said piston and adapted for connection with a fluid pressure supply line, a guide rigid with and spaced along said rod from said cylinder and guiding the other end of the rod for endwise reciprocation, a switch mechanism supported rigidly with respect to said rod guide and having a rotary actuating shaft extending transversely of and spaced from said rod, an arm fast on said shaft and pivotally connected at its free end to said rod intermediate said cylinder and said guide, a stop limiting the movement of said piston into said cylinder whereby to locate said arm end in a predetermined switch-open position while permitting endwise movement of the rod away from such position in response to an increase of fluid pressure in said cylinder, means yieldably urging the shaft and rod toward such position, said switch mechanism being adapted to close a circuit immediately on movement of said rod away from said position and decreasing the circuit resistance in the continued movement of the rod, and a coiled compression spring encircling said second rod end and having a lost motion connection at one end with said rod whereby to resist continued movement of the rod after the initial movement thereof away from said switch-open position.

2,452,034
ELECTRICAL DROP SIGNAL DEVICE
Walter H. Campbell, Arlington County, Va.
Application October 6, 1944, Serial No. 557,543
7 Claims. (Cl. 177—329)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A drop signal device comprising, a permanent magnet, a coil of wire encircling said magnet, an electrical circuit in which said coil is included, a pivoted armature attracted by and adapted to be held in a raised position by the magnet when said electrical circuit is open, said armature serving as a signal, a second electrical circuit, and a projection on said armature adapted to be included in said second electrical circuit when the armature is in a lowered position.

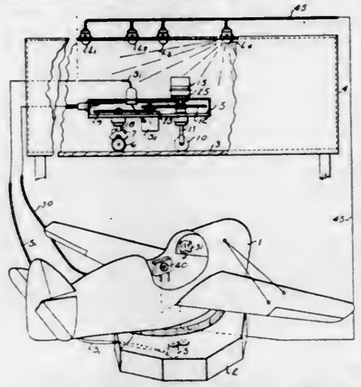
2,452,035
DOOR OPERATING MECHANISM FOR POWDER HOISTS
George A. Chadwick, Detroit, Mich., and Phillas H. Girouard, Washington, D. C.
Application March 10, 1944, Serial No. 525,964
4 Claims. (Cl. 89—46)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a gun emplacement, an ammunition hoist including a trunk and a car, a gun loading tray, a door hinged at its bottom edge to the trunk and so constructed and arranged as to substantially bridge the space between the trunk and the loading tray when the door is open, fluid pressure mechanism arranged to operate the door, sealing means arranged to secure the door to the trunk, fluid pressure mechanism arranged to operate the sealing means, and a fluid pressure system including said mechanisms for sequently actuating said mechanisms both to release the sealing means prior to opening the door and to close the door prior to fastening the sealing means.

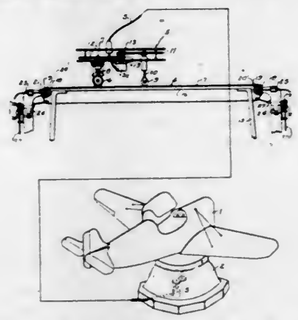
2,452,036
METHOD OF DETERMINING NICKEL CONTENT OF STEEL
Frederick B. Clardy, Portsmouth, Va.
No Drawing. Application September 16, 1946, Serial No. 697,167
5 Claims. (Cl. 23—230)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. In a process of the colorimetric determination of the nickel content of ferrous alloys, the steps consisting of applying a small quantity of a dilute solution of nitric acid, sodium phosphate, and sodium pyrophosphate to the cleaned surface of a piece of the alloy and absorbing the resultant solution with a dried absorbent material impregnated with an aqueous solution of an alkali metal acetate for buffering the solution of the alloy to a substantially neutral pH value, a salt selected from the class consisting of sodium acid phosphate and an alkali metal fluoride for forming colorless salts with the iron of the alloy, an alkali metal pyrophosphate for fixing and rendering permanent the color of the nickel precipitate and an alcoholic solution of dimethylglyoxime for precipitation of the nickel in the alloy, whereby a red colored precipitate of nickelic dimethylglyoxime is formed, the intensity of the color of which is proportional to to the amount of nickel present and is fixed and permanent in color.



2,452,037
ELECTRONIC HIGH-VOLTAGE REGULATOR
George W. Cook, Washington, D. C.
Application May 19, 1947, Serial No. 749,070
3 Claims. (Cl. 323—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An electronic regulator for stabilizing the voltage supplied by a direct-current source through positive and negative lines to a load, comprising an electron tube having at least a cathode, anode and control electrode, said tube being serially connected in the positive line to act as a regulator, an amplifier tube having at least a cathode, anode and control electrode, means connecting the amplifier anode to the positive line, means applying to the control electrode of the series tube a bias of a magnitude which is a function of the amplifier anode current, means applying to the amplifier control electrode a bias which varies with changes in load voltage, a series of grid-controlled electron tubes connected between the amplifier cathode and the negative line for accommodating a high potential difference therebetween, and means fixing the incremental resistance of said series of tubes at a value substantially no greater than zero comprising a series of resistors coupling the control grids of said series of tubes with the control electrode of said amplifier tube, and a device maintaining constant current in said resistor series whereby a signal potential impressed on the control electrode of the amplifier tube will be simultaneously applied without attenuation to the control grids of said series of tubes.

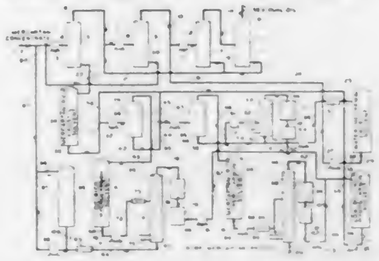


2,452,038
PHOTOELECTRIC RADIO COMPASS TRAINER CONTROL
Carl J. Crane, Dayton, Ohio
Application March 12, 1940, Serial No. 323,561
12 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination, an aviation ground trainer for simulating the flight of an aircraft, a reference surface, a course indicator movable relative to said reference surface at a velocity proportional to the simulated velocity in flight of said aircraft and directionally controlled by said trainer, a light source for radiating light over said reference surface symmetrically with respect to a point on said reference surface representing the location of a simulated radio station, a photoelectric device mounted on said course indicator and controlled by said indicator to receive light transmitted from said source in accordance with the heading of said course indicator relative to said simulated radio station point on said reference surface, an indicator in said trainer electrically connected to said photo-electric device for

indicating the heading of said course indicator relative to said simulated radio station point.

2,452,039
APPARATUS FOR SIMULATING WIND EFFECTS IN AVIATION GROUND TRAINERS
Carl J. Crane, Dayton, Ohio
Application March 12, 1940, Serial No. 323,562
7 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

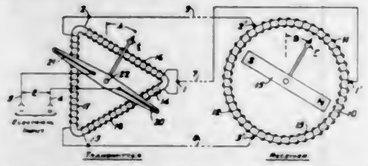


1. In combination, a record table, a course indicator for an aviation ground trainer movable relative to said record table to simulate the flight course of an aircraft, a movable surface for supporting said indicator on said record table, means for displacing said surface in either direction longitudinally with respect to said table and separate means for displacing said surface transversely in either direction with respect to said table, each of said means being severally or simultaneously operable.

2,452,040
SOLVENT EXTRACTION OF MERCAPTANS
Harry E. Drennan, Hot Springs, Ark., assignor to Phillips Petroleum Company, a corporation of of Delaware
Application October 22, 1945, Serial No. 623,798
9 Claims. (Cl. 260—609)

1. A process for the manufacture of high-boiling mercaptans which comprises effecting the catalytic addition of hydrogen sulfide to an olefin polymer fraction having not less than 10 and not

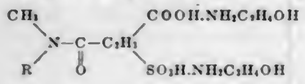
more than 14 carbon atoms per molecule under conditions producing a crude mercaptain oil containing at least 4 weight per cent mercaptan sulfur and comprising mercaptans having not less than 10 and not more than 14 carbon atoms per molecule and the corresponding unreacted olefin, subjecting said crude mercaptain oil to extraction with a sodium hydroxide-methanol-water solvent containing at least 20 weight per cent sodium hydroxide, at a temperature within the range of 40° F. to 120° F., in quantities such that the ratio of the weight of sodium hydroxide in the solvent charged to said extraction to the weight of sulfur in the crude mercaptain oil charged to said extraction is 2:1, said solvent having a water:methanol volume ratio between 0.8:1.0 and 1.5:1.0 and selected so that a single-stage equilibrium contacting of said solvent and said oil at the aforesaid conditions would effect the solution in said solvent of at least 65 per cent



but not more than 70 per cent of the mercaptans from said oil, effecting said extraction in three stages with the oil and the solvent flowing countercurrently through said stages, thereby extracting at least 90 per cent of the mercaptans from said oil, discharging residual olefinic oil from said extraction, contacting the mercaptan-rich solvent from said extraction with about five volumes of liquid pentane per volume of residual olefin dissolved in said rich solvent in a single stage at a temperature not greater than 65° F. thereby desorbing into said pentane substantially all of the olefin from said rich solvent, contacting the thus-treated mercaptan-containing solvent with about twice its volume of pentane in a single stage at a temperature of at least 100° F. to desorb mercaptans from said rich solvent into said pentane, and evaporating said pentane from the resulting mercaptan-pentane solution to recover said mercaptans substantially free from residual olefins.

2,452,041
MAKING CALCIUM ALUMINATE SINTER
Kelly L. Elmore, near Sheffield, Ala., assignor to Tennessee Valley Authority, a corporation of the United States
No Drawing. Application August 17, 1944, Serial No. 549,944
4 Claims. (Cl. 23—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

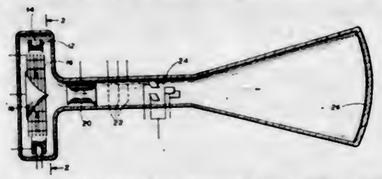
1. Process of making a calcium aluminate sinter from finely divided, highly siliceous aluminum ore and limestone whereby the alumina content of the ore is more readily rendered soluble in dilute sodium carbonate solution, which comprises (*a*) mixing intimately with the finely divided ore and limestone a material having a crystal structure and chemical composition of at least one of the principal end components of the sinter at equilibrium, said admixed material being incorporated in an amount sufficient to substantially increase the solubility of the alumina in the mixture after sintering, and (*b*) sintering the mixture so prepared.



2,452,042
TRANSMITTER FOR SELF-SYNCHRONOUS SYSTEMS
John L. Everett and Arnold Raines, Philadelphia, Pa.
Application September 10, 1945, Serial No. 615,482
6 Claims. (Cl. 177—380)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a telemetric electric transmitter, a coil support comprising a length of tubing in the cross-sectional form of an equilateral triangle in a plane normal to the central axis thereof, to form three legs, a winding on each respective leg, the common terminals of adjacent ends of successive windings being adapted for connection to respective terminals of a remote repeater, a rotor pivoted on said central axis and having arms extending oppositely from said axis, a contact on each arm each contact being adapted to make continuous electrical contact along the length of each coil in succession as said rotor is turned about said axis, each contact being adapted for connection to a respective terminal of a source of direct current potential.

2,452,043
DERIVATIVES OF SULFOSUCCINAMIC ACID
Lawrence H. Flett, Scarsdale, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application December 11, 1945, Serial No. 634,398. In Canada May 11, 1943
5 Claims. (Cl. 260—501)



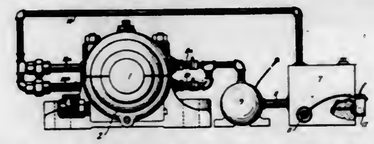
1. The di-monoethanolamine salts of N,N-disubstituted sulfosuccinamic acids having, as one N-substituent, an open-chain hydrocarbon radical of 10 to 18 carbon atoms, and, as the other N-substituent, the methyl radical, said salts corresponding with the formula

wherein R represents an open-chain hydrocarbon radical of 10 to 18 carbon atoms and being characterized by having high solubility in water and foaming and lathering power to a high degree.

2,452,044
HIGH EMISSION CATHODE
Benjamin Fox, New York, N. Y., assignor to the United States of America as represented by the Secretary of War
Application August 14, 1943, Serial No. 498,646
5 Claims. (Cl. 250—150)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

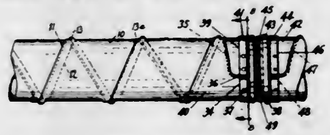
1. A high emission cathode assembly, said assembly comprising a generally cylindrical cathode of large diameter, a target having an approximately conical surface disposed at the center of said cathode and concentric therewith, and means to polarize the target more positive than the cath-

ode, whereby electrons emitted from the cathode strike said surface and release electrons by secondary emission, the region of said target constituting a virtual cathode region capable of supplying a relatively large electron current.



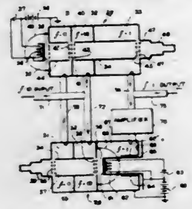
2,452,045
X-RAY APPARATUS AND METHOD FOR CRYSTAL ANALYSIS
Herbert Friedman, Arlington, Va.
Application August 8, 1945, Serial No. 609,694
6 Claims. (Cl. 250—53)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. The method of developing an X-ray diffraction pattern of a substance comprising, irradiating the concave surface of a specimen thereof which is a section of a cylinder to produce a beam of radiation, rotating said specimen through substantially 90° about an axis forming an element of said cylindrical irradiated surface to develop a diffraction pattern thereof, synchronously moving with said specimen a detector to detect the focused diffracted beam corresponding to the angle of incidence of the radiation on an arc having as its center the axis of rotation of the specimen, and repeating the above steps with an arcuate mount having a different curvature to maintain the locus of the focal point of the diffracted beam on an arc substantially concentric with the arc traversed by the detector.



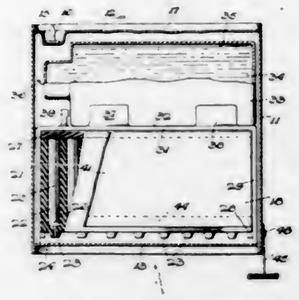
2,452,046
BEARING TEMPERATURE CONTROL SYSTEM
Ralph P. Garrison and John R. Garrison, Dayton, Ohio, assignors to Garrison Machine Works, Inc., Dayton, Ohio, a corporation of Ohio
Application December 15, 1941, Serial No. 423,066
6 Claims. (Cl. 308—77)

1. A split shaft bearing comprising two separable bearing sections, a shaft revoluble therein, and means for compensating for fluctuations of operation generated heat and minimizing resulting expansion and contraction, including separate chambers formed in the respective bearing sections in susbtantially concentric relation with the shaft to receive heating medium, a supply reservoir for heating medium common to the chambers of the respective bearing sections, a supply conduit connecting the supply reservoir with the said bearing section chambers, a return conduit connecting the respective bearing section chambers with the supply reservoir, a pump for circulating heating medium through a circuitous



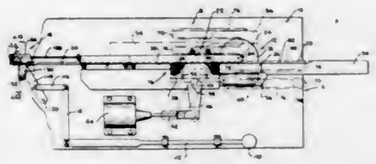
path including the conduits, chambers and reservoir, a heater to the influence of which the circulating heating medium is subjected, and a thermostatic regulator for the heater subjected to the influence of the circulating heating medium.

2,452,047
CONSTRUCTION OF FLEXIBLE HOSE
Clyde M. Hamblin, Washington, D. C.
Application May 1, 1943, Serial No. 485,324
22 Claims. (Cl. 138—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



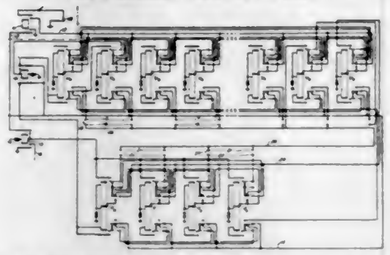
5. In a hose of the kind described, a hose formed of a strip of fabric wound helically to form a tube, a helically preformed wire of preformed contracted pitch, mounted in the body of the hose, and adapted to cause the fabric of the hose to assume folds of the iris diaphragm type when the hose is longitudinally collapsed.

2,452,048
FREQUENCY CONVERSION APPARATUS
William W. Hansen and Russell H. Varian, Garden City, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application July 12, 1943, Serial No. 494,284
25 Claims. (Cl. 250—36)



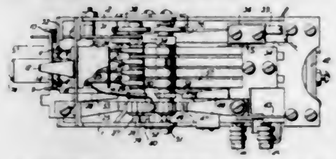
20. Electronic apparatus comprising means for producing an electron stream, electrode means positioned along the path of said stream and defining three gaps traversed successively by said stream, means defining a field-free drift space between the second and third of said gaps, means producing a first oscillating electric field of a first frequency at the first of said gaps, means producing a second oscillating electric field of a different frequency at said second gap, and output circuit means coupled to said third-gap-defining means and adapted to extract high frequency energy from said beam of a frequency different from both said first and second frequencies.

2,452,049
COMBINED PACKAGE AND FILLING DEVICE FOR BATTERIES OR HOLLOW BODIES
Vernon D. Hauck, Towson, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 16, 1945, Serial No. 578,159
10 Claims. (Cl. 226—19)



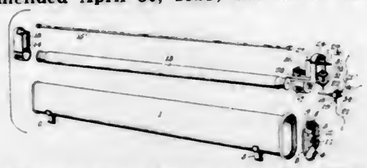
1. In a combined package and filling device for hollow bodies; a substantially evacuated hollow chamber; a closed, breakable liquid-containing vessel in the upper portion of said chamber; a hollow body in the lower portion of said chamber adapted to be filled with said liquid, said body having a plurality of downwardly directed filling openings; said chamber having a wall adjacent said vessel which is sufficiently flexible to enable said vessel to be broken by an external blow against said wall, whereby said liquid will discharge and find a level in the lower portion of said chamber; and normally sealed means for subsequently admitting atmospheric air to said chamber above the liquid level therein, whereby atmospheric pressure will force said liquid upwardly into said hollow body through said filling openings.

2,452,050
COMBINED MACHINE FOR FEEDING, BENDING, AND FLATTENING TUBING
James R. Hayward, Washington, and John A. Schild and William O. Hartup, Columbus, Ind., assignors, by mesne assignments, to McCord Corporation, Detroit, Mich., a corporation of Maine
Application June 28, 1946, Serial No. 680,124
13 Claims. (Cl. 153—2)



1. In a machine for bending and flattening tubing to form a serpentine coil, tube bending means constructed and arranged to bend a length of tubing to form spaced runs therein, tube flattening means constructed and arranged to flatten such runs of said tubing, said means being constructed and arranged relative to each other so that said tube bending means will position a run of said tubing in position to be flattened by said tube flattening means.

2,452,051
RELAY SYSTEM
Ralph E. Hersey, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 15, 1945, Serial No. 582,893
12 Claims. (Cl. 177—353)



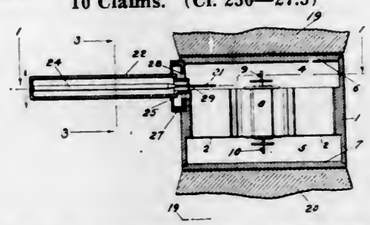
1. In combination, a chain of counting relays, control contacts common to said relays, operating circuits, one for each of said relays, each of said operating circuits being closed in succession by successive closures of said control contacts, each of said operating circuits comprising said control contacts, a front contact of the next preceding one of said relays and a back contact of the second preceding one of said relays, each operating circuit being initially opened by the next opening of said control contacts following closure of the operating circuit means independent of said control contacts for holding each of said relays operated after the opening of its operating circuit by said control contacts until the next succeeding relay is operated, and means including said control contacts for holding each of said relays operated after the operation of the next succeeding relay until the operating circuit of the next succeeding relay is opened.

2,452,052
SELECTIVELY RESPONSIVE DEVICE
Frank H. Hibbard, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 30, 1946, Serial No. 719,274
13 Claims. (Cl. 177—353)

1. A selectively responsive device adapted to respond to all codes of a plural-digit code system and adapted to enable operation of a signal circuit in responding to only one of said codes, said device comprising two shafts, each shaft having cams thereon, mechanism for rotating each shaft, one shaft rotatably responsive to each pulse of each digit of said code, the other shaft rotatably responsive to only the first pulse of each digit of said code, means for testing simultaneously the positions of at least one cam of each shaft after rotational response thereby to each digit, the positions of said cams on said shafts being predetermined and preset in accordance with the code desired to effect enabling of said signal circuit, said means operative, when said tested cams are successively in the proper preset positions upon each such test for each digit of said code, to enable operation of said signal circuit.

2,452,053
FLOATING MINE
Max L. Ilfeld, United States Army
Application July 14, 1944, Serial No. 544,967
5 Claims. (Cl. 102—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. In an explosive device, means to actuate the firing pin, comprising a clip for each end of the explosive charge, upwardly extending projections on said clips, a movable element on one of said projections, said movable element connected to the firing pin, a spring to actuate said movable element, a frangible element positioned to hold said movable element in operative position so that when the frangible element is broken the movable element will be forced to move the spring thereby causing the firing pin to move and the explosive charge to detonate.



2,452,054
FIRE-RETARDANT COMPOSITION AND PROCESS
Grinnell Jones, Cambridge, Walter Juda, Belmont, and Samuel Soll, Boston, Mass., assignors, by mesne assignments, to Albi Manufacturing Co., Incorporated, a corporation of Connecticut
No Drawing. Application June 20, 1944, Serial No. 541,297
20 Claims. (Cl. 260—17.3)

1. A potentially reactive fire-retardant composition comprising urea, a source of formaldehyde, a carbohydrate and a foam-forming ingredient selected from the group consisting of monoammonium phosphate, diammonium phosphate, phosphoric acid, ammonium sulfate, sulfamic acid, ammonium sulfamate, ammonium bromide, sodium tungstate, sodium borate and boric acid, the formaldehyde available from said source being present in a ratio between 1 and 2.5 moles per mole of urea, the urea and formaldehyde available from said source being present in amount between 20% and 70% of the weight of the foam-forming ingredient, the carbohydrate being present in amount not less than 5% of the foam-forming ingredient and the combined weight of the carbohydrate, the urea and the formaldehyde available from said source not exceeding the weight of the foam-forming ingredient.

2,452,055
AMYLACEOUS FIRE-RETARDANT COMPOSITION
Grinnell Jones and Walter Juda, Cambridge, and Samuel Soll, Boston, Mass., assignors, by mesne assignments, to Albi Manufacturing Co., Incorporated, a corporation of Connecticut
No Drawing. Application August 19, 1942, Serial No. 455,346
3 Claims. (Cl. 106—15)

1. A fire-retardant composition adapted for surface application to combustible materials, which composition is non-reactive with said material at ordinary temperatures and comprises an aqueous suspending medium having dispersed therein, as the principal ingredients, an activator selected from the group consisting of ammonium phosphate, ammonium borate, ammonium sulfate, and ammonium sulfamate, and also an amylaceous substance in amount at least 20% but not more than 70% of the weight of said activator, said amylaceous substance being intimately mixed with but not reacted with said activator, the sum of the weights of said activator and said amylaceous substance exceeding 25% of the total weight of the liquid composition.

2,452,056
ELECTRICAL DISCHARGE DEVICE
Erich Nevin Kather, South Lincoln, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application July 20, 1944, Serial No. 545,768
10 Claims. (Cl. 250—27.5)

1. A magnetron comprising: an evacuated envelope, electrode elements within said envelope providing a resonant circuit, a coaxial line having one end thereof opening into said envelope and the other end thereof hermetically sealed, a coupling loop coupling said coaxial line to said resonant circuit, and means carried by said envelope and adjustably supporting said coaxial line to enable the movement of said coupling loop relative to said resonant circuit to vary the inductive coupling therebetween.

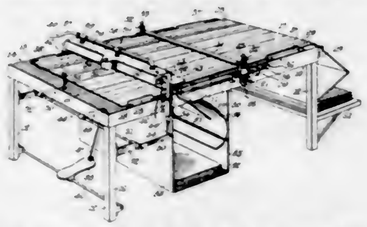
2,452,057
FLEXIBLE LEAKPROOF COUPLING
James W. Kehoe, Wauwatosa, Wis.
Application May 21, 1946, Serial No. 671,336
7 Claims. (Cl. 285—90)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An integral coupling member having cylindrical end portions, a cylindrical center portion having an outside diameter greater than the diameter of said end portions, a longitudinal bore centrally disposed in said coupling member and passing through said end and center portions, a chamber annularly disposed within and co-extensive in length with the length of said center portion, and an annular passage in said center portion connecting said chamber and said longitudinal bore, said coupling member being fabricated of a flexible material.

2,452,058
TENSION PATCH
Paul H. Kemmer, Fairfield, and Edgar R. Weaver, Dayton, Ohio
Application January 17, 1946, Serial No. 641,857
5 Claims. (Cl. 73—88)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A tension patch for load testing of aircraft comprising, a relatively soft sheet member

adapted to be cemented throughout one side to a portion of the outer surface of an aircraft structure under test, a relatively hard base plate having the same size and outline as said sheet member and firmly secured thereto in contiguous face-to-face relation, load attaching means including a load distributing member extending across said base plate and having opposite end portions secured thereto, a tension cable attaching means connected to said load distributing



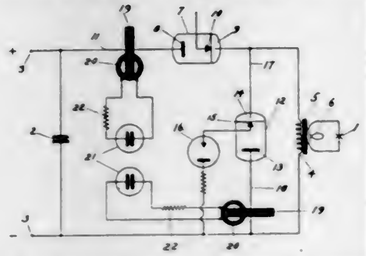
member at a point between its opposite end portions, means along the length of said load distributing member, between said end portions, providing for adjustment of said cable attaching means with respect to said opposite end portions of said load distributing member in order to connect said tension cable attaching means at a selected point along said load distributing member such that the line of the tension force exerted by the tension cable will intersect the centroid of the cemented area of said sheet member.

2,452,059

RECORD POSTING APPARATUS

Charles W. Kinzer, Greenbelt, Md.

Application September 6, 1944, Serial No. 552,853
6 Claims. (Cl. 216—28)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



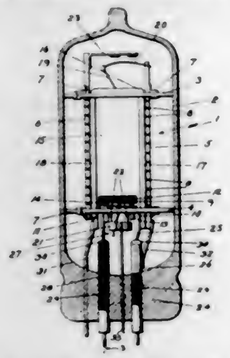
6. A posting apparatus of the class described comprising a supporting table provided with forward and rear vertically spaced top members having longitudinal guides mounted thereon adjacent to their lateral edges and adapted to support respectively a register sheet provided with a thermo-adhesive coating and a record card, said forward top member being provided with a transverse slot, an adjustable pressure roller and an advance roller rotatably mounted on said table respectively above and below said forward top member and adjacent and parallel to said slot, means in connection with said advance roller adapted to rotate the same so as to advance said coated sheet a variable, selected distance beyond the forward edge of the rear top member, a posting mechanism comprising a presser element including a spring elevated housing having a perforated bottom surface, means connecting the interior of said housing with a vacuum creating apparatus provided with an automatically operated release valve, a heating coil located within said housing adapted to render said thermo-adhesive coating effective, a shearing blade connected with said housing adapted to sever the projecting portion of said register sheet, and means adapted to lower said housing against the action of said spring to thereby sever said projecting portion of the register sheet and to lower and release same in contact with said record card and adhesively connect it.

2,452,060

IGNITION INDICATING DEVICE FOR WELDING SYSTEMS

Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application January 24, 1944, Serial No. 519,584
6 Claims. (Cl. 177—311)



1. In an electric welding system, a resistance welding load device, comprising an inductance, a circuit for supplying welding current impulses to said load device, a controlled ignition discharge tube in said circuit, means for igniting said tube to supply said impulses to said load device, a circuit in shunt with said inductance and including a rectified discharge tube polarized to conduct current upon reversal of the voltage across said inductance upon each of said impulses passing its peak value, means responsive to the passage of a current impulse through said controlled ignition tube and separate therefrom for producing a signal, and means responsive to the passage of a current impulse through said rectifier tube and separate therefrom for producing a signal.

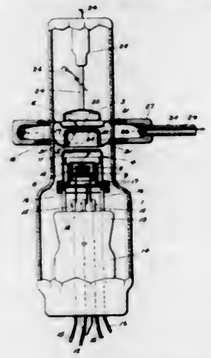
2,452,061

THERMIONIC TUBE STRUCTURE

Norman B. Krim, Newton Highlands, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application January 19, 1946, Serial No. 642,404
6 Claims. (Cl. 250—27.5)

1. Means for reducing the total grid-element-to-plate-element capacitance of a thermionic



tube in a sealed envelope comprising two metallic shields, one of said shields surrounding a portion of the lead-in wire of one of said elements, the other of said shields surrounding a portion of the lead-in wire of the other of said elements, each of said portions being the part of the respective lead-in wire which passes through the seal into said envelope.

2,452,062

ELECTRICAL DISCHARGE TUBE

James D. Le Van, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application July 29, 1943, Serial No. 496,563
7 Claims. (Cl. 250—27.5)

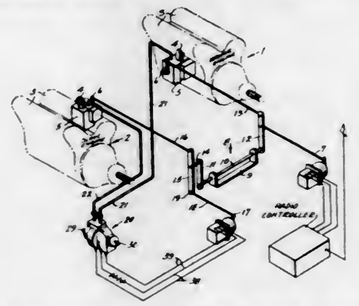
1. An electrical space discharge tube comprising a plurality of electrodes, a first of said electrodes being supported with respect to an adjacent electrode to provide a linear electron path between said electrodes, said first electrode being supported between rigid supporting elements by supporting means of substantial length, said first electrode having a portion extending from said supporting means along the direction of said electron path, the length of said portion being substantially greater than the shortest distance between said portion and said supporting elements, said portion having a substantial thermal coefficient of expansion whereby variations in the temperature of said electrode will tend to produce substantial variations in the length of said electron path, said supporting means likewise having a substantial thermal coefficient of expansion and forming an angle with the direction of said electron path, said angle being of a substantial value substantially different from ninety degrees.

2,452,063

DETONATOR DISK

Harry Liber, Morristown, and Donald R. Beeman, Wharton, N. J.

Application February 19, 1947, Serial No. 729,641
1 Claim. (Cl. 102—86.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A detonator comprising a cylindrical member containing an explosive charge and a cup-shaped disc retaining member, said charge being retained in said cylindrical member by said cup-shaped disc positioned in one end of said cylindrical member, said disc having tapered walls the major and minor diameters of which are respectively larger and slightly smaller than the inside diameter of said cylindrical member, said walls directed inwardly of said end and towards the longitudinal axis of said charge when fitted to said cylindrical member and creating a force fit with the inner wall of said cylindrical member which in combination with the pressure exerted by said charge increases the structural strength of said cylindrical member radially at said end.

2,452,064

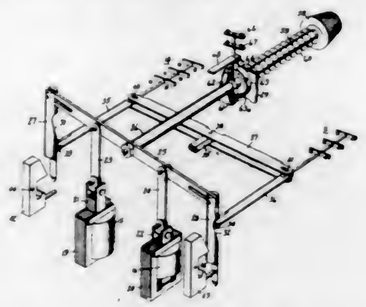
MULTIPLE MOTOR SPEED SYNCHRONIZING BALANCING DEVICE

Robert L. Mayrath, Dodge City, Kans.

Application July 26, 1944, Serial No. 546,727
7 Claims. (Cl. 60—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An engine synchronizing device for adjusting and synchronizing the speeds of a pair of internal combustion engines, said synchronizing device comprising a pair of engine speed adjusting levers disposed for swinging movement about a common center, means for mounting one of said levers for swinging movements independently of the other lever, interconnecting means between the levers for shifting said levers together about said common center, operating connections from the ends of said levers remote from the common center and adapted to be connected to the throttle valves of the internal combustion engines to simultaneously shift the same when said levers are simultaneously shifted by said interconnecting means, and means for shifting one of said levers independently of the other lever comprising a differential pressure actuating device connected to said independently shiftable lever, having differential pressure supply means therefor adapted to be connected to the intake manifolds of the two combustion engines for supplying the differential pressures from the engine intake manifolds in accordance with the relative difference in speeds of the engine.

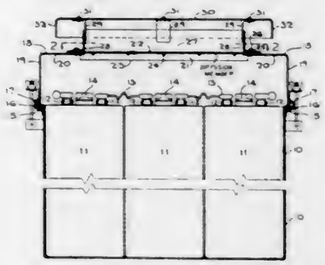
2,452,065



ELECTRIC SWITCH

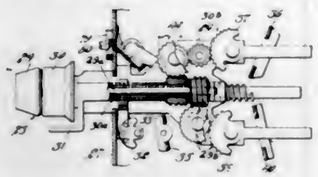
Don E. Moran and Samuel F. Jarvis, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application December 30, 1943, Serial No. 516,260
4 Claims. (Cl. 200—87)



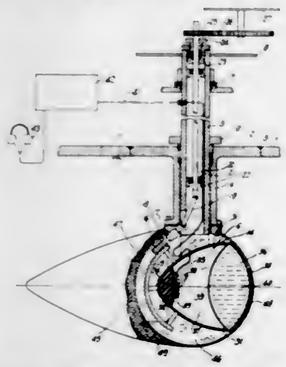
1. An electric switch comprising a movable switch member, an operating member movable to

operate said switch member, said operating member being provided with an abutment, electromagnetic actuating means for said operating member including an armature connected to said operating member and a stationary magnet frame for said armature, an operating coil on said magnet frame, a pivoted member extending in the direction of movement of said operating member, a laterally extending projection on said pivoted member positioned to be engaged by said abutment when said operating member approaches



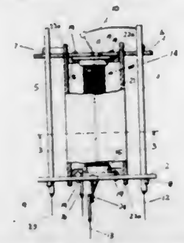
the limit of its movement when said coil is energized to move said armature to its attracted position whereby said pivoted member is moved on its pivot, braking means operated by said pivotal movement of said pivoted member for engaging said operating member thereby to apply a frictional braking force to said operating member whereby said operating member is brought to rest by said projection in a predetermined position with said armature in spaced relation with said magnet frame.

2,452,066
GAS DIFFUSION DEVICE FOR STORAGE BATTERIES
Harold Purves Murphy, Ridley Park, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application March 24, 1945, Serial No. 584,637
6 Claims. (Cl. 136—179)



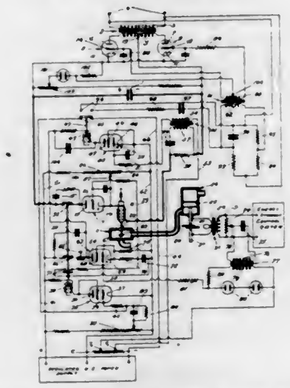
5. A device for preventing the accumulation of explosive mixtures of hydrogen and oxygen over a storage battery having a plurality of cells comprising a porous diffusion member of extended area, said member offering appreciably less resistance to flow of hydrogen than to flow of oxygen, and means to support said member over the battery cells and to prevent the escape of gases from the cells into the surrounding atmosphere except through said member.

2,452,067
APPARATUS FOR RADIO TUNING, VOLUME CONTROL, WAVE BAND SELECTION, AND OTHER PURPOSES
Freeman H. Owens, New York, N. Y.
Application July 11, 1945, Serial No. 604,364
24 Claims. (Cl. 74—10)



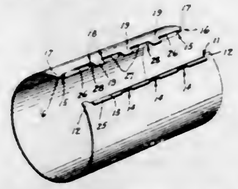
1. Apparatus for effecting tuning and volume control adjustments of a radio receiver comprising a plurality of movable station selecting members, a rocker in the path of movement of one portion of said members for effecting tuning adjustments, a rocker in the path of movement of another portion of said members for effecting volume control adjustments, cams adjustably mounted on the respective portions mentioned of said members for effecting variable adjustments of said tuning and volume controlling rockers, separate, hand operable elements on one of said members for independently setting the tuning adjusting and the volume control adjusting cams on said member, and means on another of said members for securing the cams thereon in positions to which they may be set by engagement with the rockers, said means being releasable to free said cams for setting by said rockers and adjustable to secure the cams in the positions to which they have been set.

2,452,068
SOUND PICKUP DEVICE
Robert E. Peterson, Danvers, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application January 23, 1943, Serial No. 473,415
7 Claims. (Cl. 177—386)



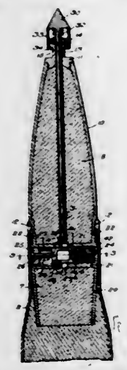
1. A sound pickup device comprising a casing having a sound lens at one side thereof, a substantially rigid member positioned in another part of the casing extending over the focal surface of the lens and a plurality of pickup elements mounted on said rigid surface adapted to receive sound waves arriving substantially in the same phase at said focal surface, said pickup elements comprising a plurality of Rochelle salt crystals mounted with one compressional surface on said rigid element and a sound propagating medium within said casing to which the other compressional surfaces of said crystals are exposed.

2,452,069
GRID STRUCTURE
William Bradford Reed, Westwood, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 29, 1945, Serial No. 637,888
5 Claims. (Cl. 250—27.5)



1. A grid element for a thermionic tube comprising a first group of individual wires progressing helically in one direction about the periphery of a cylinder, a second group of individual wires progressing helically in the oposite direction about said periphery, the two groups of wires being in interwoven relationship with each other at the points where they cross each other, and a solid metallic band rigidly fastened to each end of said element to prevent unraveling of the wires thereof.

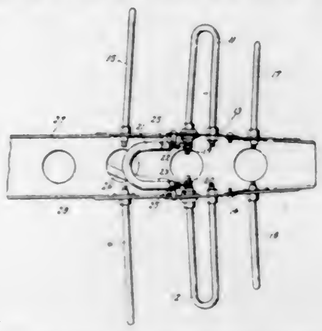
2,452,070
RESISTANCE WELDING FORGING PRESSURE CONTROL
Lloyd Daniel Runkle, Gloucester, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 25, 1945, Serial No. 574,542
11 Claims. (Cl. 219—4)



5. A system for controlling the application of forging pressure to the work in resistance spot welding, comprising a pressure control device, a solenoid for actuating said device, means responsive to the flow of a welding impulse to the work and effective after a predetermined time delay for controlling the supply of a high voltage current impulse to said solenoid, means for supplying a low voltage holding current to said solenoid immediately following said high voltage current impulse, and means effective after a controlled period of time for disconnecting said solenoid from said means for supplying a low voltage holding current and thereby return said pressure control device to its normal position.

2,452,071
CAN BODY
Basil F. Saubestre, Elmhurst, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 19, 1945, Serial No. 629,643
4 Claims. (Cl. 220—76)

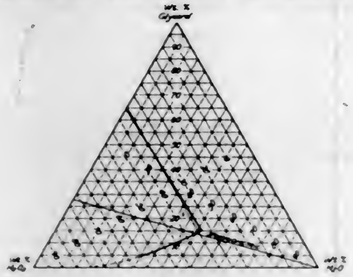
1. A reenforced can body capable of resisting high internal pressures and having inner and outer marginal hook edges bent in opposite directions along predetermined lines of fold interlocked in a side seam and secured together in a solder bond in the side seam, a plurality of open vent notches extending inwardly from the outer edge of the inner hook at spaced intervals therealong, and a straight non-folded portion of the can body on the outside of said body adjacent each of said notches extending into and substantially filling said notches to provide vented passageways through said seam for the capillary action of solder applied to the outside of the seam to insure a fully bonded seam free of islands and other unsoldered portions.



2,452,072
EXPLOSIVE BULLET
Sherman A. Schatz, Charleston, W. Va.
Application March 17, 1944, Serial No. 526,957
7 Claims. (Cl. 102—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

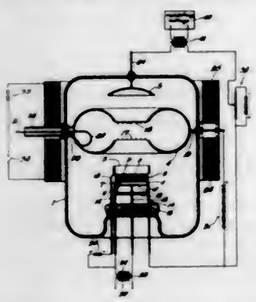
4. An explosive projectile adapted for insertion in a cartridge case comprising, in combination, a jacket provided with a central passage at its nose end and open at its tail end, an explosive charge in the forward end of the jacket and a tracer charge in the tail end, a partition separating said charges, a detonator slide in the par-

tition and having a detonator therein, a firing pin extending through said nose passage to a point close to the detonator slide, an impact head carried by the forward end of the firing pin, spring means normally holding the firing pin away from the detonator, spring means in the partition normally urging the slide to a position to bring the said detonator into line with the firing pin, an arming pin arranged to be interposed between the detonator slide and a cartridge case to hold the detonator in the slide out of alignment with the firing pin before firing and thereafter engaging the barrel of the gun to hold the slide in such position until the projectile clears the gun barrel, means carried partly by the slide and partly by the partition whereby communication is established between the explosive charge in the projectile and the tracer charge, so that the explosive charge is ignited by the tracer charge should the target be missed, to destroy the projectile.



2,452,073
FOLDED DIPOLE
George William Schivley, Buchtel, and Paul W. Springer, Dayton, Ohio
Application November 17, 1944, Serial No. 563,980
1 Claim. (Cl. 250—33.65)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

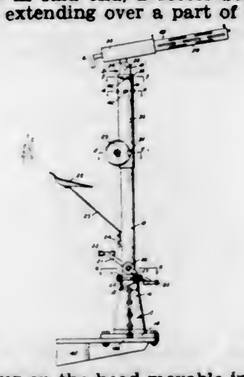
The combination in a two-section folded dipole directional radio antenna provided with wave reflector and director elements for transmission and reception of pulsed radio waves, of adjustable means for adapting said antenna for use on variable width mountings, said means comprising a pair of demountable assembly plates having mounted thereon mating sections of said antenna, reflector and director elements, and a length of coaxial multiple conductor cable looped and electrically connecting said plates and antenna sections so as to allow variable interspaced juxtaposed mounting of said plates while maintaining constant phase characteristics of said antenna.



2,452,074
PEROXIDE-GLYCEROL EXPLOSIVE
Edward S. Shanley, Grand Island, and Hans O. Kauffmann, Eggertsville, N. Y., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.
Application January 29, 1947, Serial No. 725,042
2 Claims. (Cl. 52—1)

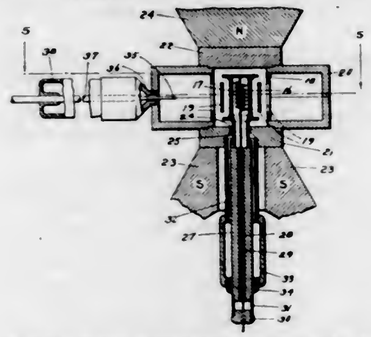
1. An explosive, insensitive to mechanical impact but explodable with a blasting cap, which comprises glycerin, water and hydrogen peroxide, the water constituting not more than 52% of the mixture, the glycerine and hydrogen peroxide being present in approximately the stoichiometric

amounts required for complete combustion of the glycerine to carbon dioxide and water.



2,452,075
VELOCITY MODULATION ELECTRON DISCHARGE TUBE
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 18, 1941, Serial No. 423,493
15 Claims. (Cl. 250—27.5)

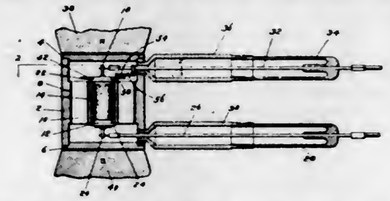
2. An electron velocity modulation discharge device comprising a plurality of electrodes including a cathode having an active surface which liberates secondary electrons readily, an electron velocity modulating electrode structure comprising a pair of electrode elements through which an electron path from said cathode passes, the electrons emitted from said cathode forming an electron stream along said path, said electrode elements being connected to each other by a cavity resonator having a sufficiently high resonant frequency to impart bunching to the electron stream in said path, and electrode means for directing electrons onto said cathode with sufficient energy and in sufficient numbers to liberate secondary electrons which form part of said electron stream.



2,452,076
GUN MOUNT
Myron C. Spencer, Ocean Grove, N. J.
Application February 7, 1944, Serial No. 521,376
2 Claims. (Cl. 89—37)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

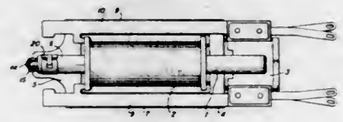
1. In a mount of the character described, a base, a primary person carrying mount element mounted for rotation on a vertical axis, and a final mount portion consisting of a cylindrical upwardly presented open end member rotatable with the primary mount element, and a head part rested on said end and having a shank portion set revolubly in said end, a recess being formed in said end extending over a part of its circumfer-

ence, a lug on the head movable in said recess to limit relative rotation of said head on the mount, and a rocking support for an instrument on the head.



2,452,077
ELECTRIC DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 19, 1944, Serial No. 519,077
4 Claims. (Cl. 250—27.5)

1. A magnetron comprising: a cathode; an anode surrounding said cathode; and means adjacent said cathode and said anode for establishing a magnetic field in a direction transverse to the path therebetween; said anode having a plurality of perimetrically closed slots formed therein and spaced from each other around said anode by a distance substantially equal to the length of a half-wave at the frequency desired of the output of said magnetron; each of said slots being of a length substantially equal to a half-wave length in a direction parallel to that of said magnetic field.

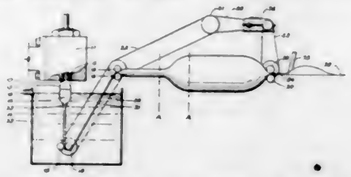


2,452,078
THERMALLY TUNABLE ELECTRON DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 24, 1944, Serial No. 537,119
3 Claims. (Cl. 315—39)

1. An electron discharge device comprising: an envelope containing a cathode; an anode structure including a plurality of electron-receiving portions adjacent said cathode, and a plurality of cavities between said portions; said anode structure providing inductance and capacitance; and frequency stabilizing means including a tuning member, and a thermostatic, bimetallic strip fixed at one end to said device; said bimetallic strip including two laminae having different coefficients of expansion; said strip at its

other end supporting said tuning member, with the lamina of said strip having the greater coefficient of expansion adjacent said electron-receiving portions; said strip being operatively connected to said tuning member for adjusting the position of said tuning member relatively to said electron-receiving portions, and being responsive to variations in temperature to vary said capacitance, and, thereby the frequency of the oscillations generated by said device.

2,452,079
RELAY
Leland J. Stacy, Caldwell, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 22, 1944, Serial No. 541,636
1 Claim. (Cl. 175—336)

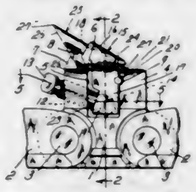


In combination in an electromagnetic relay, a fixed core and an armature movable toward said core, a coil around said core for producing magnetic flux to attract said armature toward said core when said coil is energized, and a separable spacer inserted between said core and armature to limit the residual magnetism in said core and armature to control the release characteristics of said armature when said coil is deenergized, said spacer comprising a band of thin magnetic material wrapped around the pole-piece end of said core and having a tongue portion on one end thereof extended through a slot in the other end thereof and then bent back on itself to firmly clamp said spacer around the core.

2,452,080
METHOD OF CONTINUOUSLY EXTRUDING VINYLIDENE CHLORIDE POLYMER TUBES AND STRETCHING THE SAME
Wilbur T. Stephenson, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application January 13, 1947, Serial No. 721,738
3 Claims. (Cl. 18—47.5)

1. The method which includes continuously extruding a tube of fused normally crystalline vinylidene chloride polymer at a temperature between 120° and 190° C.; withdrawing the tube downwardly from the die orifice through a cool-

ing bath, the surface of which is less than about 6 inches below the orifice and the temperature of which is maintained at a constant value between 0° and about 40° C. to supercool the tube, at a speed greater than the speed of the polymer through the die orifice, while maintaining a predetermined head of a lubricating liquid within the tube to regulate the diameter and wall thickness of the super-cooled tube and to lubricate its inner surface; flattening the tube and advancing it through the nips of a first and a second pair of pinch rolls, which pairs are stationed a distance from one another at least 5 times the diameter of the supercooled tube; introducing and maintaining a gas in the section of tube between said pairs of rolls in amount more than sufficient to fill the tube to its supercooled diameter and



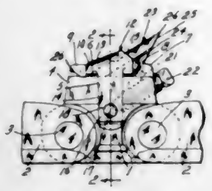
sufficient to establish a positive internal pressure and to distend the tube a portion of the distance from the second said rolls back toward the first said rolls, to from 3 to 5 times the diameter of the supercooled tube, but insufficient to distend the tube to such enlarged diameter the entire distance between said pairs of rolls, thereby cold-stretching the tube in a zone intermediate between and removed from the two sets of rolls, the amount of gas employed being so limited that introduction of an additional quantity thereof results in lengthening of the enlarged bubble and displacement of the cold-stretching zone toward the first pair of rolls, without material increase in the diameter of the enlarged bubble; and driving the second pair of pinch rolls at a peripheral speed of from 2 to 4 times that of the first pair of pinch rolls.

2,452,081

CUTTER CHAIN

Francis E. Sullinger, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application July 10, 1944, Serial No. 544,208
4 Claims. (Cl. 262—33)



1. In a cutter chain, a chain block having a lateral lug provided with vertical grooves at its opposite sides, a bit holder having an outer head and an inner shank, said head being recessed for the reception of a cutter bit, and said shank having parallel side portions receivable in said grooves, a pivot connection between said shank and said block lug for permitting pivotal movement of said holder relative to said block, and means on said block for engaging the side portions of said holder shank for swinging said holder in said grooves into bit clamping position relative to said block.

2,452,082

CUTTER CHAIN

Charles F. Osgood, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application July 13, 1944, Serial No. 544,725
9 Claims. (Cl. 262—33)

1. In a cutter chain, a chain block having a lateral lug, said lug having vertical grooves at its opposite sides and a plane upper surface disposed at right angles to said grooves, a holder straddling said lug and having a socket adapted to receive a cutter bit and parallel side portions received in said grooves, said plane upper lug surface providing a seat for the inner end of the bit, said lug being transversely slotted between said side grooves near the lower ends of the latter, a cross pin secured to said side portions and passing through the slot, and means on said block and engaging said cross pin for sliding said side portions inwardly in said grooves to clamp the bit against said plane upper surface.

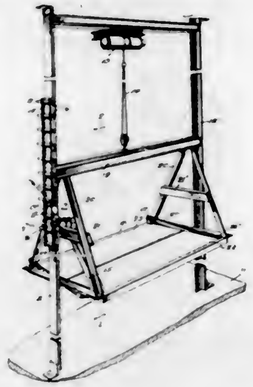
2,452,083

METHOD OF REINFORCING ORGANIC-POLYSULFIDE RUBBERY MATERIAL WITH CARBON BLACK

Theodore A. Te Grotenhuis, Olmsted Falls, Ohio

No Drawing. Application January 8, 1943, Serial No. 471,745
6 Claims. (Cl. 260—37)

1. A method of preparing a substantially unmasticated reinforced rubbery material of the organic-polysulfide type, which comprises combining carbon black with a reactive liquid organic compound having connected to each of two carbon atoms connected by intervening structure a substituent group capable of being split off by a reaction with an aqueous solution of a water-soluble polysulfide to produce a rubbery reaction product, subjecting the carbon black to a deflocculation treatment in the presence of said reactive organic liquid to form an intimate mixture, and reacting the reactive organic material of the carbon black-containing mixture thus formed with an aqueous solution of a soluble polysulfide to obtain a rubbery reaction product having carbon black dispersed therein.



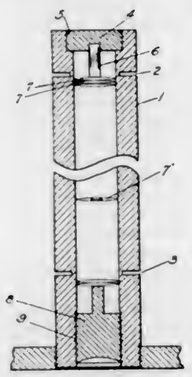
2,452,084

DROP-TESTING DEVICE

John R. Tomlin, Arlington, Va.; Ralph E. Remington administrator of said John R. Tomlin, deceased

Application June 1, 1945, Serial No. 597,054
14 Claims. (Cl. 73—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

6. In a drop testing machine of the type comprising an elevator platform, uprights, and means for raising and lowering said platform between said uprights: a retractable obstruction associated with one of said uprights, a pair of swinging decks forming the floor of said platform, an arm rigidly secured to and extending upwardly from one of said decks, a vertically slidable latch



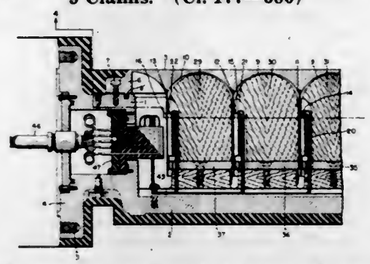
engaging said arm, and a pivoted lever engaging said latch and extending outwardly to a point permitting contact with said obstruction.

2,452,085

MEANS FOR THE INTERCHANGE OF ELECTRICAL AND ACOUSTICAL ENERGY

Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application August 6, 1942, Serial No. 453,909
6 Claims. (Cl. 177—386)



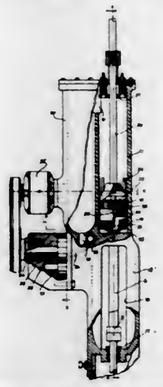
1. Means for the interchange of electrical and acoustical energy comprising a hollow cylindrical element the outer surface of which serves to radiate and receive compressional wave energy, a stack of laminations positioned in said cylindrical element with the plane of each said lamination being substantially at right angles to the axis of the cylinder, said laminations being of a magnetostrictive material and initially having a dished form and means provided at one end of said cylinder for compressing said laminations therein to make a good acoustic coupling between the edges of the laminations and the inner walls of the cylinder.

2,452,086

SOUND PRODUCER AND RECEIVER

Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application March 10, 1945, Serial No. 582,110
5 Claims. (Cl. 177—386)



1. Means for producing a beam of compressional waves comprising a radiating member having a substantially plane surface on one side and the other side formed with concentric annular areas having radial sections in the form of cycloidal arches, and vibratory means comprising concentric cylindrical members firmly attached at the vertices formed by the cycloidal arches, an energizing coil positioned between the ends of the cylindrical members, said cylindrical members comprising magnetostrictive elements forming with the radiating member tuned vibratory systems with vibrational nodes in said cylindrical member away from the base of the cycloidal arches in the vicinity of said energizing coils.

2,452,087

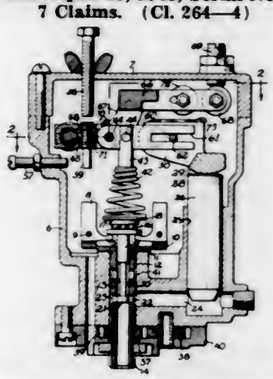
PUMP JACK

Roy W. Wagner, Fairbury, Nebr.

Application June 5, 1945, Serial No. 597,636
2 Claims. (Cl. 60—52)

2. In a pump jack, the combination, which comprises, a motor cylinder fixedly mounted on a well casing, a double-end yoke associated with said motor cylinder, a pump rod extending into the well casing from the lower end of the yoke, and a piston rod extending into the motor cylinder from the upper end of the yoke; a piston on the said piston rod positioned in said motor cylinder, a valve having a stem longitudinally positioned and slidable in said piston, contact fingers extending from the end of said valve stem positioned at opposite sides of said piston rod, said piston having a valve seat associated with said

valve, said valve extending beyond the end of the piston and positioned for contact with the end of the motor cylinder wherein contact of the valve with the inner surface of the end of the cylinder closes the valve, said piston having a passage extending therethrough associated with the valve and adapted to be closed thereby, said fingers of the valve stem positioned to actuate the said valve to open position upon engagement thereof with an obstruction at the opposite end of the cylinder, means resiliently holding said valve in the open position, a complementary bypass cylinder positioned parallel to said motor cylinder, and means connecting said bypass cylinder to said motor cylinder for freedom of travel of said piston.



2,452,088

GOVERNOR CONTROL FOR PRIME MOVERS

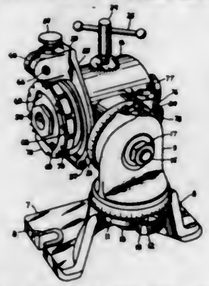
Willard J. Whitehead, Rockford, Ill., assignor to Woodward Governor Company, Rockford, Ill., a corporation of Illinois

Application April 19, 1943, Serial No. 483,591

7 Claims. (Cl. 264—4)

1. A governor having in combination, rotary flyballs, means resiliently opposing said flyballs, an element manually movable to adjust the stress on said flyballs by said means whereby to vary the speed setting of the governor, a speed-regulating member variably positioned in accordance with speed changes detected by said governor, a lever pivotally supported by said element and actuated by said member to adjust said stress with changes in the position of the member, and a second lever pivotally supported by said element and normally disconnected from said member but movable with the latter within a portion of the range of movement of the member, said second lever operating with a greater motion-transmitting ratio than said first lever to adjust said stress.

2,452,089



UNIVERSAL WORK HEAD

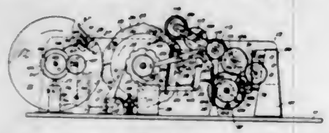
Christy A. Wiken and Eric A. Reibig, Milwaukee, Wis., assignors, by mesne assignments, to Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application June 15, 1944, Serial No. 540,509

8 Claims. (Cl. 90—57)

1. Indexing means for a work locating device wherein a work holder is journalled for rotation in a headstock, comprising an index disc attached to the work holder; an index pin attached to the headstock and movable radially with respect to the axis of rotation of said work holder towards said index disc, a series of spaced peripheral notches in said disc and engageable by said index pin to hold said disc and work holder against rotation; a selector plate adjustably attached to said index disc for rotation therewith but operable to be shifted with respect to said index disc about the axis of said work holder, said selector plate being of substantially the same diameter as said index disc and also having spaced

peripheral notches arranged so they uncover different combinations of notches in the index disc when the plate is shifted from one to another position with respect to the disc whereby said selector plate blocks the engagement of said index pin with the notches in said index disc except those uncovered by said selector plate.



2,452,090

CODING APPARATUS

Louvan E. Wood, Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application December 29, 1944, Serial No. 570,402

12 Claims. (Cl. 177—351)

1. In a signaling apparatus, a rotatable code wheel; power means, including ratchet means, for advancing said code wheel step-by-step; ratchet means for preventing retrograde rotation of said code wheel, the latter having a plurality of sets of code-defining projections around its periphery; a structure mounted for rotation adjacent said code wheel and carrying switch means having a finger adapted to ride over the set of projections of said code wheel located nearest said device; and time-controlled means for advancing said code wheel for a predetermined period; means for rotating said device after advance of said code wheel has ceased; and resetting means for returning said code wheel to a predetermined starting position subsequent to completion of rotation of said device.

2,452,091

INCENDIARY MATERIAL

David L. Woodberry, United States Army, William W. Howerton, Bel Air, Md., and Alver Dunbar, Teaneck, N. J., assignors to the Secretary of War of the United States of America and his successors in office, as trustee

No Drawing. Application November 23, 1942, Serial No. 466,658

5 Claims. (Cl. 44—3)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An incendiary composition composed essentially of a uniform mixture of from about 54.7 to about 61.2 parts by weight of iron oxide scale having a particle size substantially equivalent to the following U. S. Standard sieve requirements:

	Per cent
Retained on No. 12 sieve	None
Passing No. 12, retained on No. 20 sieve	Max. 5
Passing No. 20, retained on No. 50 sieve	Min. 30
Passing No. 140 sieve	Max. 10

from about 14.6 to about 20.0 parts by weight of barium nitrate, having a particle size substantially equivalent to the following U. S. Standard sieve requirements:

	Per cent
Passing No. 50 sieve	Min. 100
Passing No. 200 sieve	Max. 75

and from about 23.0 to about 26.0 parts by weight of aluminum, from about 3.8 to about 5.5 parts by weight of said aluminum being sufficiently subdivided that it reacts with and prevents the decomposition of said barium nitrate with explosive violence, and the remainder of said aluminum having a particle size substantially equivalent to the following U. S. Standard sieve requirements:

	Per cent
Retained on No. 12 sieve	None
Passing No. 12 sieve, retained on No. 30 sieve	13 to 26
Passing No. 30 sieve, retained on No. 50 sieve	35 to 45
Passing No. 50 sieve, retained on No. 140 sieve	30 to 46
Passing No. 140 sieve	0.0 to 3

2,452,092

RUBBERLIKE PRODUCT AND PROCESS OF PREPARATION

Waldo C. Ault, Philadelphia, and Benjamin B. Schaeffer, Upper Darby, Pa., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application October 10, 1944, Serial No. 558,068

7 Claims. (Cl. 260—399)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process of preparing polymers which comprises auto-esterifying a mixture of substantially pure monohydroxystearic acid and a substantial amount of substantially pure ricinoleic acid.

5. The process of preparing rubber-like products which comprises vulcanizing the polymers produced by the process of claim 1.

2,452,093

PURIFICATION OF HARD WAXES BY REMOVAL OF SOFT FATTY COMPONENTS

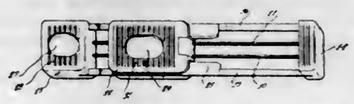
Royal T. Balch, Houma, La., assignor to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application March 29, 1946, Serial No. 658,199

11 Claims. (Cl. 260—428.5)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A method of obtaining granular crystals of sugarcane wax, comprising inducing crystallization by slowly cooling over a period of several hours, to about room temperature, with stirring, a molten crude sugarcane wax and wax-solvent mixture, in which the weight ratio of wax to solvent is between one and two parts of wax to one of the solvent, to obtain a solid phase of granular wax crystals and a liquid phase consisting essentially of a solution of the fatty fraction of crude wax in the wax solvent.



2,452,094

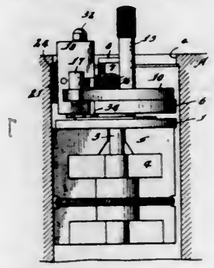
RAZOR BLADE SHARPENER

Gote E. Bergman, New York, N. Y.

Application October 22, 1947, Serial No. 781,463

2 Claims. (Cl. 51—158)

1. A razor blade sharpener comprising guide rods transversely spaced from one another, end pieces connected to the opposte ends of the guide parts, a slide adapted to be extended over the guide rods and having separable parts, means projected from the parts for retaining the razor blade so that its edges extend laterally therefrom and are accessible from both bottom and top sides, thin spring strips extending from one end piece to the other and located respectively upon opposite sides of the guide rods, and sharpener pieces carried upon the spring strips and adapted to be engaged by the opposte side edges of the razor blade as the same is moved back and forth along the guide rods.



2,452,095

CYLINDER RIDGE REAMER

Herbert A. Berkman, Chicago, Ill., assignor to Zim Manufacturing Company, a corporation of Illinois

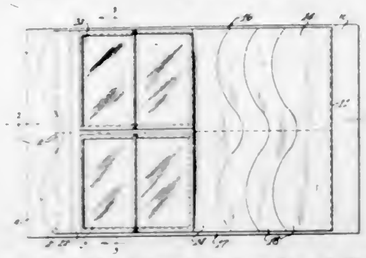
Application June 5, 1946, Serial No. 674,475

8 Claims. (Cl. 77—2)

1. In a cylinder reamer, a device having thereon a rotatable member, means to secure said device in an engine cylinder at a substantial distance from a ridge to be reamed, an element on said rotatable member having a longitudinal guideway in position to face the cylinder wall and be near and parallel thereto, a block narrower than the guideway slidable in and lengthwise of the latter, a cutter blade lying flat beside the block in the guideway, the blade being pivoted to the block for rocking movements in an approximately radial plane and projecting outwardly from said block, and means to cause the block to move lengthwise of the guide-way when the rotatable member is turned.

2,452,096

COMBINED BILLFOLD AND CARD RETAINER



Marion F. Bertalotto, Monett, Mo.

Application November 15, 1946, Serial No. 709,910

1 Claim. (Cl. 150—35)

In a combined billfold and card retainer including an outer wall and an inner wall arranged in spaced superposed relation with respect to said outer wall and secured at its opposite ends to the adjacent face of the latter wall, both walls being of a width slightly in excess of twice the

width of a piece of paper money, and of a length in excess of the length of such piece of paper money, the improvement consisting in securing said walls along a line intermediate the longitudinal edges of the outer wall to thereby form separate, lengthwise compartments for the reception of currency therein, attaching a plurality of overlapping pieces of pocket-forming material to the inner face of the inner wall adjacent one end of the latter and parallel to the line of se-

curement at the longitudinal center of the billfold to provide a series of compartments for the reception of cards therein and attaching a pair of overlapping pieces of pocket-forming material, of a size larger than the first named pieces to the inner face of the inner wall adjacent the opposite end of the latter and parallel to the transverse edges of the billfold to provide a pair of pockets for the reception therein of articles of a size larger than those receivable in said compartments.

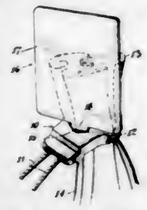
2,452,097

HOUSEHOLD INCINERATOR

Harry B. Bornside, Providence, R. I.

Application February 2, 1944, Serial No. 520,999
1 Claim. (Cl. 110—18)

A burner construction having vertical wall sections, a bottom section, and a top section, said sections forming a combustion chamber, the wall sections comprising rectangular metal angle frames having upper and lower edges, and longitudinally disposed concave strips with their concave sides directed inwardly of the combustion chamber, the inner surfaces of the ends of the strips being flattened and secured to the upper and lower edges of the frames, said strips being spaced to provide narrow air passages therebetween.



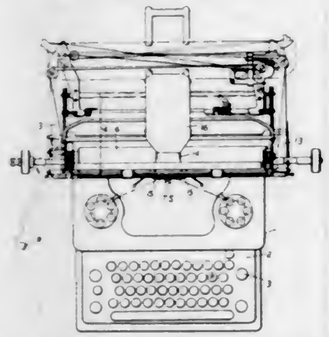
2,452,098

METHOD OF SECURING IDENTIFICATION TAGS TO SEALS

Elinor Brooks, Califon, N. J.

Application May 15, 1945, Serial No. 593,864
1 Claim. (Cl. 40—21)

The method of securing a rupturable identification tag to bag sealing means, which bag sealing means consist of a sealing and gripping member, composed of a flat sleeve of deformable sheet material, and of a double-end flexible strand threaded and rethreaded through said sleeve to form loops to be passed and tightened around the material of the mouth of a bag, comprising: passing loops of said strand around the material of the mouth of the bag and preliminarily tightening said loops to thereby bring one end of said sleeve adjacent to the material of said bag, bending said sleeve downwardly to thereby temporarily expose that end thereof which is adjacent the



material of the bag, introducing a portion of said tag through the end thus exposed into said sleeve, restoring said sleeve to its original position and tightening said loops around the material of the bag, and then deforming said sleeve to thereby grip the strand and that portion of the tag that extends into the sleeve.

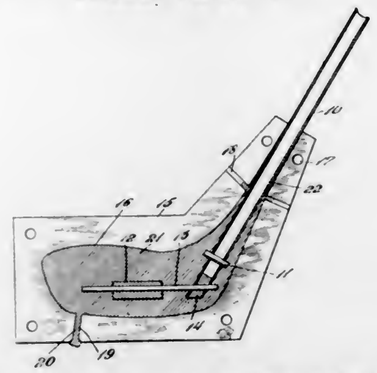
2,452,099

MEANS FOR PRODUCING REDUPLICATIVE MASTER SHEETS IN TYPEWRITING AND LIKE MACHINES

Claude Wellington Brumhill, Leicester, England, assignor to The Imperial Typewriter Company Limited, Leicester, England

Application October 24, 1945, Serial No. 624,160
In Great Britain June 7, 1945
3 Claims. (Cl. 197—153)

1. In a typewriting machine of the kind in which type impressions are produced in reverse on the back of a master sheet, by feeding a ribbon between the sheet and the front of a rotary platen with an impression-producing face of the ribbon presented to the back of said sheet at a typing station at the front of the platen, the combination with the rotary platen, means for feeding the master sheet down under the platen from the back and up the front thereof past the typing station, and ribbon-feeding means for feeding the ribbon between said sheet and platen at the typing station, of a thin anvil of sheet material for taking the type impacts at the typing station, and means for supporting said anvil at said station between the ribbon and the front of the platen which means comprises a stationary anvil-support arm extending forwards from the rear of the machine and at its front end leading downwards over the platen there to be located behind the sheet ascending from the typing station and affording room beneath it at the rear of the



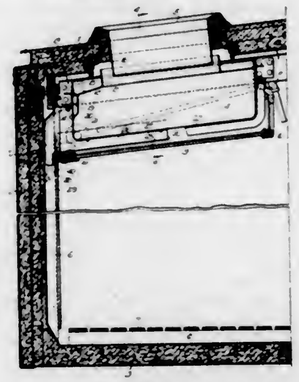
platen for accommodating the sheet to be fed under the platen, and means on the front end of said arm for the removable attachment of the anvil.

2,452,100

HEAD FOR GOLF CLUBS

Nelson S. Campbell, Greenwich, Conn.

Application September 1, 1945, Serial No. 614,070
5 Claims. (Cl. 273—77)



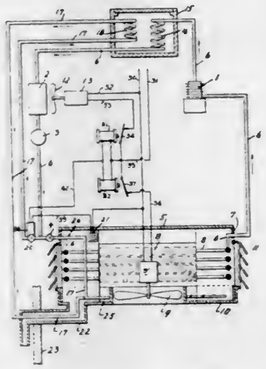
1. A golf club having a head with a shank extending therefrom, said shank having a bore therein continuing into said head and straight for its entire depth, a shaft straight for its entire length extending into said bore, a pin of a less diameter than said shaft having an end portion thereof secured in said shaft and extending in a straight line from said shaft and at an angle thereto, a balancing member carried by said pin, said head being one homogeneous mass of molded material completely enveloping said member, pin and the portion of the shaft extending into said head.

2,452,101

DRIP PAN HINGE FOR REFRIGERATOR CARS

Edward S. Cisco, Highland, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application August 1, 1946, Serial No. 687,723
9 Claims. (Cl. 62—17)



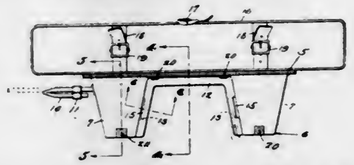
1. In a refrigerator car having a roof, hinge means for hinging a partition to a car wall under a refrigerant container positioned and in close proximity to adjacent said roof and wall; said hinge means comprising a hinge bracket secured to said wall and hinge links pivotally supported at one end by said bracket and pivotally attached at their other ends to said partition, the location of the pivotal attachments of said links being such that as said partition pivots downwardly it swings inwardly so that the outer edge of the partition is always maintained within the limited space between said partition and container.

2,452,102

REFRIGERATING SYSTEM DEFROSTED BY HOT LIQUID REFRIGERANTS

John B. Cocanour, San Jose, Calif., assignor to Colvin-Templeton, Inc., Oakland, Calif., a corporation of California

Application November 6, 1944, Serial No. 562,189
29 Claims. (Cl. 62—2)

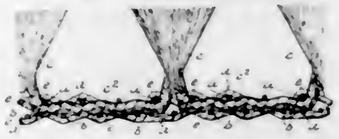


1. A cooling system comprising a conduit, a compressor, a condenser, a receiver, an expansion valve and an evaporator connected into the conduit in series for passing a refrigerant therethrough, a by-pass for the expansion valve having means for heating the refrigerant therein, and control means for the by-pass whereby the latter is opened in response to a predetermined drop in temperature in the evaporator for defrosting the latter.

2,452,103

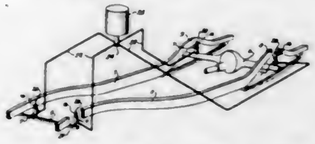
HEADREST

Julius A. Conradt and Richard J. Conradt, Rochester, N. Y.



Application April 15, 1946, Serial No. 662,350
1 Claim. (Cl. 155—173)

An inflatable headrest constructed of flexible material, comprising a substantially rigid rear section, and a front section secured to the rear section comprising preshaped air chambers, a wall connecting the air chambers and cooperating with the rear wall providing an air passageway therebetween communicating with the air cham-



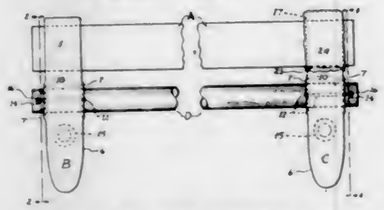
bers, the adjacent inner walls of the air chambers being inclined throughout their lengths, and providing a space for the reception of the head of the person using the headrest, a soft rubber lining in the space between the inner walls of the air chambers and wall connecting the air chambers for contact by the head of the person using the headrest, and straps for securing the headrest to the back of a chair.

2,452,104
PILE FABRIC
David M. Cooper, Huddersfield, England
Application November 28, 1945, Serial No. 631,431
In Great Britain December 2, 1944
9 Claims. (Cl. 139—392)

1. A woven pile fabric consisting of two warps and three wefts, one of the latter being interwoven at least mainly with one of the warps to form substantially one face of the fabric, a second being interwoven at least mainly with the other warp to form substantially the other face of the fabric, and the third being employed at least mainly as a tie thread to bind the two warps together.

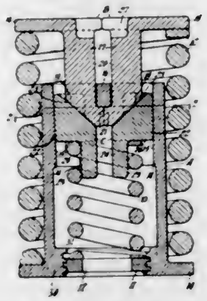
2,452,105
SHOCK ABSORBING SYSTEM FOR VEHICLES
Joseph Mario Cosentino, Baltimore, Md.
Application September 11, 1946, Serial No. 696,306
1 Claim. (Cl. 280—104)

In combination with a master cylinder, a plurality of interconnected hydraulic shock absorbing cylinders, pistons in said shock absorbing cylinders, coil springs below said pistons, a free floating piston in said master cylinder, a coil spring compressed between said free floating piston and the head in said master cylinder, an interiorly disposed annular seat for said piston when in its lowermost position, an apertured partition disposed transversely of said master cylinder in horizontal alignment with said seat, an apertured plate valve in the lower end of said master cylinder below said piston, means for limiting the upward movement of said plate valve, and a coil spring disposed between said partition and said plate valve for firmly holding the plate valve in its lowermost position.



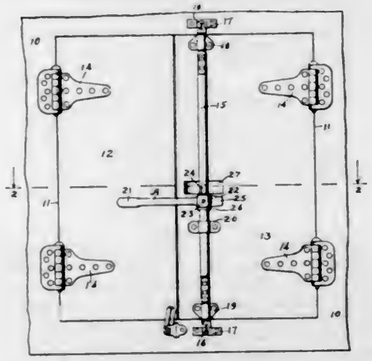
2,452,106
RADIO ANTENNA
Gordon H. Cotchefer, Long Beach, Calif.
Application March 16, 1946, Serial No. 654,840
12 Claims. (Cl. 250—33.57)

1. An antenna array which comprises a straight vertical driven element capable of radiation over a height one-half nL where L is the wave-length and n is an integer greater than 1, a parasitic element of height one-half L adjacent the top one-half L section of the said driven element and



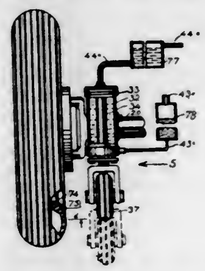
a transmission line connected to the bottom one-half L section of said driven element.

2,452,107
VENETIAN BLIND CLEANER
Beatrice Cranney, Seattle, Wash.
Application June 30, 1947, Serial No. 757,980
1 Claim. (Cl. 15—102)



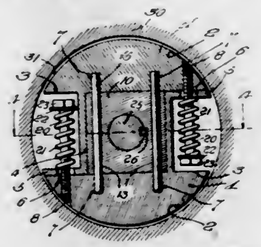
A device for cleaning Venetian blinds, comprising, a pair of clamping upper and lower jaws for binding over Venetian slats to be cleaned, handles extended rearwardly from the jaws for operating the same, a spring mounted between the handles for normally binding the jaws upon opposite sides of the slats in predetermined positions, a hub integrally disposed between the lower jaws and handles and being pivotally connected with the said upper jaws and handles and provided with an eye therethrough, a rod disposed through the eye with one end thereof normally bound to said hub and the other end of the rod projected laterally from the hub for disposition parallel with the slat to be cleaned, a second pair of jaws and handles pivotally connected by a hub integrally formed with one of the jaws and provided with an eye slidably disposed on the rod and adapted to be moved to and fro on the rod for wiping the jaws thereof along and upon opposite sides of the slat to be cleaned, ribs around the cleaner jaws adjacent to the bases thereof for retaining covers over the jaws, flexible covers mounted over the cleaner jaws and ribs, for wiping and collecting dust from the faces of the slats, a relatively light spring mounted between the handles of the cleaner jaws adapted to normally sustain the covers of the jaws against the faces of the slats, said handles being adapted for regulating the tension of the last described springs and jaws on the slats and to facilitate manual operation of the cleaner jaws to and fro along the slats parallel with the rod.

2,452,108
FRICTION SHOCK ABSORBING MECHANISM
George E. Dath, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a cosporation of Delaware
Application February 10, 1944, Serial No. 521,786
5 Claims. (Cl. 267—9)



1. In a friction shock absorbing mechanism, the combination with a friction casing open at one end and having interior friction surfaces at said open end; of a lengthwise split wedge block, said casing and block being movable lengthwise with respect to each other, said block comprising two like sections; a stop web extending transversely across the open end of the casing, and directly connecting the opposite side walls thereof; shoulders on the inner sides of the sections of the wedge engageable in back of said web to limit outward movement of the wedge; friction shoes within the casing having sliding engagement with the friction surfaces thereof and wedging engagement with the wedge; and spring means within the casing yieldingly opposing inward movement of the shoes.

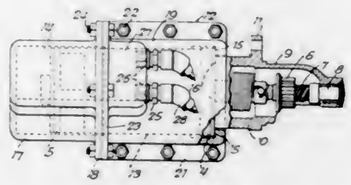
2,452,109
LOCKING MEANS FOR ROTARY ACTUATING BARS OF DOOR FASTENERS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 25, 1947, Serial No. 763,562
5 Claims. (Cl. 292—218)



1. In a door operating mechanism, the combination with a rotary operating bar mounted on the door and having keeper engaging means thereon cooperating with fixed keepers to force the door open or closed; of an operating handle lever connected to the bar for rotation therewith, said lever extending radially of said bar at one side thereof; and a locking projection on said lever projecting beyond the opposite side of said bar, said door having a recessed portion providing clearance for said projection to permit rotation of said bar in door opening direction, said lever being slidable lengthwise of said bar to a position beyond said recessed portion of the door to bring said projection in position in front of said door to block said lever against rotation in door opening direction.

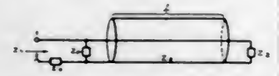
2,452,110
AUXILIARY SAFETY WHEELS FOR USE ON AUTOMOBILES AND TRUCKS
George J. Dourte, Denver, Colo.
Application August 27, 1945, Serial No. 612,929
5 Claims. (Cl. 280—150)

1. A safety device for automotive vehicles having at least one axle supported by wheels, a hydraulic jack cylinder connected with the axle adjacent each wheel, a piston in the cylinder, a piston rod extending through the lower cylinder head, the lower end of the piston rod having a wheel fork, a wheel mounted for rotation in the fork, a source of fluid under pressure, means comprising a control valve for directing fluid from said source into the cylinder on one side of the piston, and for simultaneously connecting the space on the other side with the atmosphere, to move the piston rod and wheel, the control valve having a neutral position in which communication with both sides of the piston is cut off, and means for automatically applying a braking force to the wheel when the piston is moved downwardly.



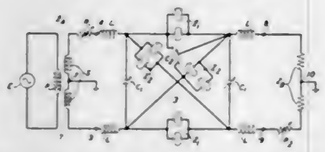
2,452,111
SPEED RESPONSIVE CLUTCH
Frank O. Eaton, Capon Bridge, W. Va.
Application December 20, 1946, Serial No. 717,374
5 Claims. (Cl. 192—105)

1. In speed responsive mechanism for clutching activities and the like, wherein an annular



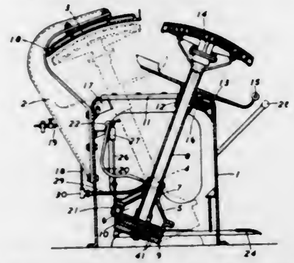
face is positioned relative to a rotatable driving member of square contour to present a common axis condition therebetween, a mechanism assembly for operatively producing a frictional clutching relation between the member and face by centrifugal force activity during rotation of the member, said assembly comprising a pair of elements carried by the member and operatively connected therewith to be driven thereby, said elements being of similar contours and dimensions and each including an arcuate face adapted to be cooperative with the annular face and a chordal face normally contacting a side face of the member, said elements being located in similar positions relative to opposite side faces of the member contour, said member carrying a pair of parallel pins in spaced-apart relation, each pin having projecting end zones extending into the elements and forming a drive relation between the member and elements with the elements movable in the direction of length of the projecting pin end zones, each element having an arm projecting normal to the chordal face and in parallelism with an adjacent side face of the member, each arm having its free end provided with a perforated base member extending outward normal to the direction of length of the arm and normally lying in contact with the chordal face of the opposite element, and means including a spring carried individually by each element and coacting with the base member of the other element for producing a yieldable resistance condition opposing centrifugal force with the resistance applied in directions normal to the direction of length of an element chordal face, whereby the element movements relative to the member will be controlled in direction by said pins and by the arm contact with member side faces.

2,452,112
EXPLOSION-PROOF STARTER
William F. Eckert, Rochelle, Ill.
Application April 12, 1945, Serial No. 588,005
8 Claims. (Cl. 172—36)



1. In combination with an electrical machine having a generally cylindrical housing and having a brush assembly in one end and an armature shaft extending from the other end, means on the latter end portion of the housing for mounting the housing on a support, an air-tight explosion resisting housing for enclosing the housing of said machine from the brush assembly end to the other end, said enclosing housing being generally cup-shaped and having a tight friction fit on the cylindrical exterior of said machine housing, whereby said enclosing housing is supported on said machine housing and an explosion occurring in the inner end of the enclosing housing will cause endwise displacement of said enclosing housing toward the brush assembly end, said enclosing housing having an annular internal shoulder in the open end thereof for abutment annularly on the adjacent end of the machine housing with an air-tight fit to limit such endwise displacement.

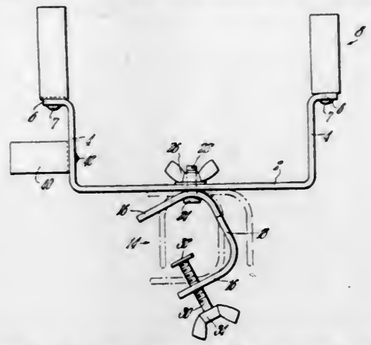
2,452,113
SWITCH FOR HIGH-FREQUENCY ELECTRICAL OSCILLATIONS
Dennis Clark Espley, North Wembley, England, assignor to The General Electric Company Limited, London, England
Application March 30, 1946, Serial No. 658,404
In Great Britain March 7, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires March 7, 1965
8 Claims. (Cl. 178—44)



1. A switch for high-frequency oscillations of frequency f comprising a stub including a concentric uniform line of length L substantially different from $q\lambda/4$ where q includes all integers of odd and even gender, and λ is the wave length along the said line corresponding to the frequency f, the members of said stub being adapted to be connected at one end of the stub to another uniform line which the switch is to control, the second end of said stub being open, a conductor relatively movable with respect to the open end of said stub between a first position in which said conductor and the open end of said stub are remotely spaced and a second position in which said conductor and the open end of said stub are closely spaced, whereby said conductor gives rise to a capacitative impedance of value C in said second position shunting the open end of said stub, and at least one compensating impedance element permanently electrically connected to said first end of the stub, the number of impedance elements and the type and value of each impedance element and its connection to said first end of the stub being such with respect to the frequency f, the value of L, the impedance C and the characteristic impedance Z_0 of the stub, that when said conductor is in one of said positions the impedance across said first end of the stub is substantially zero and when said conductor is in the other of said positions the impedance across said first end of the stub is substantially infinity.

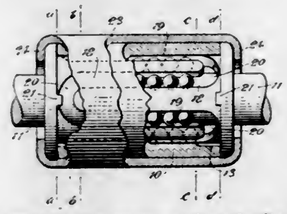
2,452,114
BALANCED WAVE FILTER
Francis S. Farkas, Forest Hills, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 26, 1945, Serial No. 590,366
20 Claims. (Cl. 178—44)

14. In combination, two load impedances grounded substantially at their electrical midpoints, a wave filter interposed between said impedances, a resistance connected between a terminal of said filter and one of said impedances, and a second resistance connected between the diagonally opposite terminal of said filter and the other of said impedances, said filter comprising impedance branches which have a high degree of susceptive symmetry but have a residual conductive dissymmetry with respect to ground at a frequency at which transmission through said filter is substantially completely suppressed and said resistances having magnitudes such that said conductive dissymmetry is substantially eliminated at said frequency.



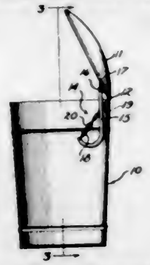
2,452,115
POWER ACTUATED GARMENT AND LIKE PRESSES
Charles Edward Feasey, Enfield, England, assignor to James Armstrong & Company Limited, London, England, a corporation of Great Britain
Application February 17, 1945, Serial No. 578,431
In Great Britain April 30, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 30, 1961
2 Claims. (Cl. 38—35)

1. In a garment or like press, the combination of a main frame, a stationary ironing head mounted on said frame in a fixed location at the rear of the press, a movable unit pivotally mounted intermediate its ends in said frame to swing about a horizontal axis and having the portion above said pivotal axis of materially greater length than the portion below said axis, a buck comprised in and forming the upper end portion of said unit and movable through an arcuate path by swinging movements of said unit about its axis from a forward loading position clear of said head into a rearward pressing position beneath said head, and vice versa, a power applying cylinder for said buck effective to move it upwardly when it is in its pressing position, said cylinder being incorporated in the portion of said movable unit below the pivotal axis thereof and rendering the weight of such portion sufficient almost to counterbalance the upper portion of the unit including the buck, valve means automatically actuated as the buck reaches its pressing position to supply fluid under pressure to said power applying cylinder to cause upward pressure of the buck against the ironing head, and means for exhausting pressure fluid from said cylinder to release the press.



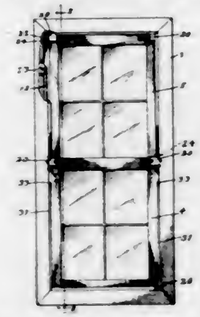
2,452,116
HOLDING DEVICE
George F. Felton, Millers Falls, Mass.
Application September 7, 1945, Serial No. 614,968
1 Claim. (Cl. 248—42)

A device for releasably clamping a fish rod to a support comprising in combination a holder member bent from a single strip of metal to have a substantially straight intermediate portion and side legs at opposite ends thereof extending upwardly from opposite ends thereof at right angles thereto, the upper extremities of said side legs being turned relatively outwardly away from one another at right angles to said legs, a pair of clip members formed from strips of resilient metal to have intermediate portions and spaced arms extending upwardly therefrom, said intermediate portions secured to said extremities, a bracket member formed from a single strip of metal to have a straight central intermediate strut portion with end arc portions curving outwardly and away from opposite ends thereof and extremities in spaced parallel relation disposed at right angles to said strut, an end portion of said strut and one arc and extremity portion adjacent thereto provided with a continuous slot therethrough and said portions adapted to be disposed in contiguous



relation on the intermediate portion of said holder, said intermediate portion of the holder provided with an opening therethrough, both means extending through said opening and slot adapted to secure said holder and bracket together in various relative positions, a clamp member in threaded engagement with the other end portion of the bracket for engaging an object between said end portions of the bracket and securing the bracket thereto.

2,452,117
SLIDING ANTIFRICTION BEARING
Hulbert K. Ferger, Flushing, N. Y., assignor of one-half to John B. Thomson, Plandome, N. Y.
Application November 6, 1945, Serial No. 626,940
11 Claims. (Cl. 308—6)



1. An anti-friction bearing for shafts and the like comprising, in combination with the shaft, a sleeve having a counter-bore at each end thereof and a plurality of longitudinal recesses therein extending from one counter-bore to the other, two sets of longitudinally extending ball-guides between the shaft and sleeve whereof the guides of one set alternate with those of the other set and register respectively with said recesses while the guides of the other set are out of register with said recesses, a plurality of approximately semi-circular guides located within the respective areas defined by the counter-bores and the ends of each of which are continuous with the respective adjacent ends of two adjacent longitudinal guides, and bearing balls substantially filling all said guides and of such size that only the balls in the longitudinal guides out of register with said recesses will have bearing contact with the shaft and sleeve at any moment.

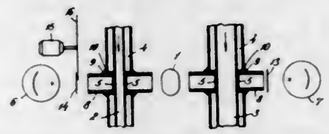
2,452,118
FIRE EXTINGUISHING WASTE PAPER RECEPTACLE
Dewey A. Florence, Philadelphia, Pa.
Application June 4, 1946, Serial No. 674,308
1 Claim. (Cl. 220—89)

A receptacle comprising in combination, a container open at the top thereof, a cover on said open top, a hinge connecting said cover to said container, a spring associated with said hinge and urging said cover into the closed position, and supporting means comprising an arm pivotally connected at one end thereof to the underside of said cover, a length of chain connected at one end thereof to the remaining end of said arm, the remaining end of said chain being secured to the lateral wall of said container, and a fusible link interposed into the length of said chain, said supporting means normally holding said cover in the open position, the melting of said link separating said chain and causing the closing of said cover under the influence of said spring.

2,452,119
WINDOW FRAME AND SASH
Michael Garros, Garwood, N. J., assignor of fifty per cent to Edgar F. Widin, Garwood, N. J.
Application August 24, 1945, Serial No. 612,354
1 Claim. (Cl. 20—43)

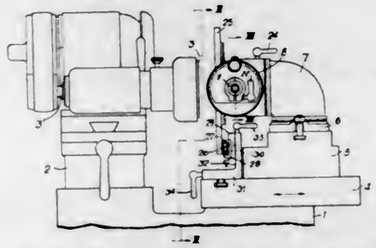
In an apparatus of the class described, the combination of a window frame provided with rear cleats, and with front cleats, said window frame having at its bottom a rear portion lower than the front portion of the bottom, said rear cleats terminating short of the lower portion of the bottom of the window frame, said front cleats terminating at their upper ends at approximately the middle of the window frame, an upper sash slidably mounted within the window frame and adapted to engage the lower portion at the bottom of the window frame and be pivoted outwardly to rest against the lower ends of the rear cleats, a lower sash slidably mounted in said window frame and adapted to be swung outwardly to rest upon the upper ends of said front cleats, and each sash being provided with lock devices cooperating with the window frame, whereby the sash is held normally against pivotal movement upon the window frame.

2,452,120
HANGER
Herbert D. Gorne, Bellingham, Wash.
Application May 25, 1946, Serial No. 672,291
1 Claim. (Cl. 248—317)



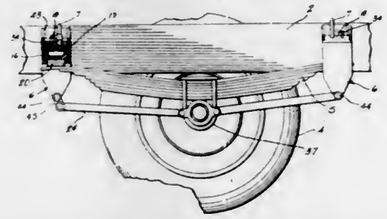
A hanger for fluorescent tubing, comprising an annular base plate removably secured to a supporting structure, an outwardly projecting central hub portion integrally formed with said base plate, an opening provided in said plate, a ball seat provided in said hub portion communicating with said opening, a shank receiving aperture provided in said hub portion communicating with said ball seat, a shank, a spherical element carried by one terminal of said shank rotatably engaging said ball seat, a hook member at the opposite terminal of said shank, an outwardly turned, arcuate lip at the outer extremity of said hook member, a flexible element carried by said shank engaging said lip for closing the opening of said hook, and an adjustable set screw carried by said hub portion selectively engaging said spherical element.

2,452,121
CONVERSION OF SYNTHETIC HYDROCARBONS CONTAINING OXYGENATED COMPOUNDS TO HYDROCARBONS OF HIGH OCTANE VALUE
James H. Grahame, Mount Vernon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application November 26, 1947, Serial No. 788,325
7 Claims. (Cl. 260—450)



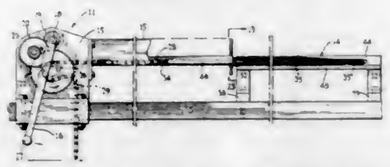
1. A process for the manufacture of motor fuel hydrocarbons which comprises reacting carbon monoxide with hydrogen in the presence of an iron catalyst at a temperature within the range of from about 500 to about 700° F. and a pressure within the range of from about 150 to about 550 pounds per square inch gauge, subjecting the resulting reaction products to a temperature within the range of from 200 to 300° F. and a pressure within the range of 150 to 550 pounds per square inch gauge whereby condensate is formed comprising a hydrocarbon-rich phase and a water-rich phase, withdrawing the hydrocarbon-rich phase and subjecting same to fractionation to separate therefrom a fraction boiling within the range of 100 to 625° F., passing said fraction in vapor phase at a temperature within the range of 700 to 900° F. into contact with a catalyst comprising essentially alumina at a space velocity within the range of 1 to 10 liquid volumes of hydrocarbon per volume of catalyst per hour, and recovering the resulting treated hydrocarbon fraction of improved octane value.

2,452,122
APPARATUS AND PROCESS FOR TESTING MATERIALS
Percy W. Gumaer, West Englewood, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
Application November 15, 1943, Serial No. 510,369
17 Claims. (Cl. 250—43)



1. Apparatus for continuously testing fluids containing a plurality of components, said fluids being subject to variation in composition, comprising in combination a source of light of wave length such that different amounts of the light are absorbed by streams of the fluid of different thickness, a source of fluid to be tested, two fluid channels of different thickness having wall portions transmissive of said light, means for simultaneously and continuously passing two streams of the fluid to be tested from said source of fluid through the respective channels, said streams of fluid being of substantially the same composition, two devices sensitive to light of said wave length, said light source, said transmissive wall portions and said light-sensitive devices being located so that light passes substantially continuously from said source through one of said channels to one of said light-sensitive devices and simultaneously passes substantially continuously from said light source through the other of said channels to the other of said light-sensitive devices, and an electric circuit connecting said light-sensitive devices in opposition, said circuit involving a portion through which current from one light-sensitive device tends to flow in one direction and current from the other light-sensitive device tends to flow in the opposite direction, whereby the electrical condition of said circuit is a function of the capacity of said fluid to absorb said light.

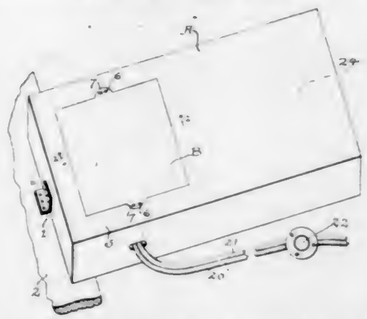
2,452,123
ARRANGEMENT IN GRINDING MACHINES
Karl Wilhelm Josef Hjelmblad, Alsten, Sweden
Application February 14, 1945, Serial No. 577,740
In Sweden March 4, 1944
6 Claims. (Cl. 51—123)



1. In a grinding machine the combination with a frame, a grinding tool carrying member, a work piece carrying spindle journalled in a movable carrier, a dividing unit comprising a pair of members mounted on said spindle and angularly adjustable with respect to each other, means for coupling said members mechanically in the desired one of a plurality of positions of angular adjustment, and means for clamping one of said members to said spindle, of a lead unit for guiding the rotary movement of said spindle, relatively to the carrier; said lead unit comprising a guide rail mounted in the frame to be set in various angular positions about an axis relatively to said frame, means for clamping said rail in a desired position of angular adjustment two-way motion-transmitting means connecting said rail to the other member of said pair of members and thereby to said spindle when said pair of members are mechanically connected by said coupling means, whereby motion may be transmitted to said spindle upon displacements of said carriage when said guide rail is clamped by said clamping means in angular position with respect to the path of movement of said carriage and alternatively angular adjustment of said guide rail may be effected by rotation of said spindle when said clamping means is released, said motion-transmitting means including a roller engaging said rail and having a neutral position in which its axis coincides with the axis of angular adjustment of said guide rail, and cooperating means on said carrier and said other member for latching the latter in a preselected zero position of angular adjustment with respect to said spindle corresponding to the neutral position of the motion-transmitting means.

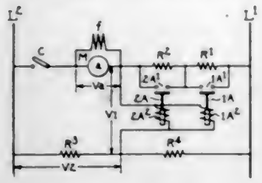
2,452,124
HYDRAULIC SCALE
Victor J. Huston and Frank G. Huston, Muskegon, Mich.
Application April 2, 1946, Serial No. 659,103
3 Claims. (Cl. 265—40)

3. Load weighing apparatus for a vehicle having axles, a frame, springs supporting said frame on said axles, and link means operatively interconnected between said frame and said axles to maintain said frame against longitudinal movement relative to said axles, said apparatus comprising fluid-filled, compressible units secured to said frame, one at each end of each spring, and bearing upon said springs to transmit load forces between said frame and said springs, each of said units comprising a strong, hollow casing having in its bottom end an opening smaller than said bottom end to provide an internal shoulder around said opening, a hollow container of flexible material in said casing, and a head projecting through said bottom opening in the casing and having a flange bearing upon said shoulder to preclude movement of said head out of said casing, said head bearing at its upper side on the bottom of said hollow container and at its lower side against the corresponding spring end, conduit means inter-connecting all of said containers, means connected with said conduit means to maintain said containers filled with hydraulic fluid, and an indicator connected to said conduit means for indicating the load imposed on said springs.



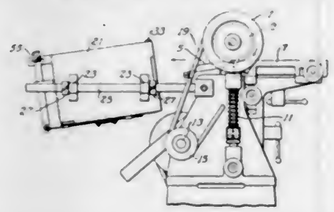
2,452,125
METHOD OF FORMING AND CHANGING THE CROSS SECTION OF CONVOLUTED METAL TUBING
David Ingalls, Westfield, and John Herman Petersen, Union, N. J., assignors, by mesne assignments, to Titeflex, Inc., Newark, N. J., a corporation of Delaware
Application June 12, 1945, Serial No. 599,088
12 Claims. (Cl. 153—2)

1. In the art of re-forming flexible corrugated metal tube that has a helically corrugated wall, the improvement which consists in filling with a deformable pressure resisting material those corrugations that open toward the inside of the tube, changing the cross section shape of the tube by pressure applied internally thereof, and removing the corrugation filling material while said material is in a solid state.



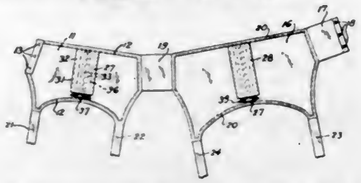
5. In the art of reforming flexible helically wound metal tube the improvement which comprises filling the internal corrugation with a continuous length of a metal wire, filling the outer corrugation with a deformable material, changing the cross section shape of the tube by pressure applied internally thereof while both the inner and outer corrugations of the tube are filled, and after reforming the tube, removing the wire from the internal tube corrugation and also removing the material from the outer tube corrugation.

2,452,126
SEALER
Frank N. Irwin, Jr., South Miami, Fla.
Application April 26, 1945, Serial No. 590,486
5 Claims. (Cl. 219—19)



4. A sealer for Cellophane or waxed wrapped bread or the like for use in a delivery vehicle comprising, a solid block having an opening in its top and adjacent one of its ends, a box of a size to fit within and fill said opening, means for removably securing the box in the opening, said box having a metallic top disposed substantially flush with the top surface of said block, an electrical heat resistance element within said box and in heat exchange relationship with the metallic top thereof, means to secure said block in a convenient position within a vehicle provided with an electrical battery, electrical conductors interconnecting said vehicle battery and said heating element, and a foot operable circuit maker and breaker connected to said conductors for controlling the supply of current to the heating element.

2,452,127
COUNTERELECTROMOTIVE FORCE MOTOR STARTER CONTROL SYSTEM
Kenneth D. James, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application August 2, 1945, Serial No. 608,533
5 Claims. (Cl. 318—394)

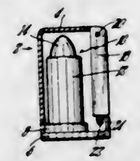


4. The combination with a motor, of a supply circuit therefor and starting means for said motor comprising a starting resistor, an electroresponsive control switch for said resistor, and resistors connected in series across said supply circuit, said switch having an operating winding connected in a loop with the armature of said motor and certain of the last recited resistors for response to C. E. M. F. of said motor, other of said last recited resistors being interposed between said loop and said supply circuit and the connections thus afforded said winding constituting a bridge circuit for said winding to minimize certain of the influences, including changes in line voltage, which tend to render action of said switch erratic.

2,452,128
SPLITTING MACHINE
Charles E. Johnson, Belmont, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 11, 1946, Serial No. 696,253
3 Claims. (Cl. 69—13)

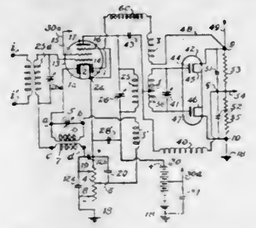
1. In a machine for operating upon soles, in combination, operating mechanism, a receptacle for receiving and stacking soles as they are discharged from the operating mechanism, said receptacle having a wall arranged to arrest the movement of the soles away from the operating mechanism, a bottom, opposed guides between which the soles are stacked upon falling toward said bottom, each guide being mounted for adjustment toward and away from the other, operator controlled means for adjusting said guides simultaneously, and a clamp for securing said means in adjusted position.

2,452,129
SANITARY GARTER BELT
Irving Kaldor, San Francisco, Calif.
Application April 26, 1947, Serial No. 744,223
2 Claims. (Cl. 2—304)



1. A sanitary garter belt comprising a front cloth section, a rear cloth section connected to said front section, a first sheet of cloth stitched to the inner side of said front section to define a first open-bottom pocket on the inside and at the approximate longitudinal center of said front section, a second sheet of cloth stitched to the inner side of said rear section to define a second pocket having an open bottom on the inner side and at the approximately longitudinal center of said rear section; said first and second pockets being in alignment when the garment is worn on the body, an elastic strip within said first pocket and stitched at one end to the upper edge of said first sheet to depend therefrom, an elastic strip secured to the upper edge of said second sheet within said second pocket to depend from said second sheet, and napkin fasteners on the depending ends of said strips.

2,452,130
METHOD OF SPINNING HIGH TENACITY VISCOSE RAYON
Guillaume M. A. Kayser, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
No Drawing. Application April 1, 1946, Serial No. 658,865. In Germany December 16, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 16, 1963
5 Claims. (Cl. 18—54)

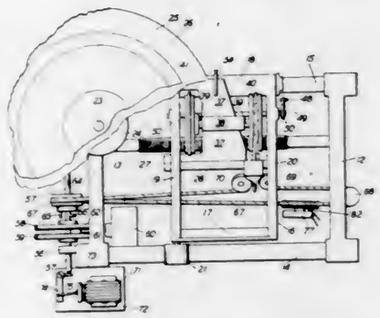


1. A method of manufacturing high tenacity viscose rayon involving the use of a precipitating bath, and a hot bath in which the rayon is highly stretched which comprises subjecting the rayon to the influence of a small amount of formaldehyde prior to the high stretching effected in the hot bath.

2,452,131
COSMETIC DEVICE
Ralph E. Kruck, Longmeadow, Mass.
Application February 28, 1946, Serial No. 650,863
2 Claims. (Cl. 15—130.1)

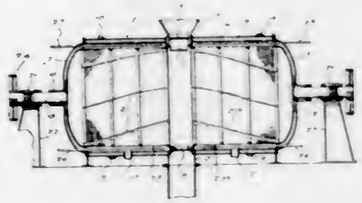
1. A cosmetic device for applying lip rouge comprising in combination, a receptacle member having a longitudinal axial bore therein extending between upper and lower ends thereof closed at its upper end and open at its lower end and also provided with a longitudinally extending slot in a side thereof, an elongated applicator receivable in said slot having an outer end provided with an applicator tip and an inner end pivoted in said slot adjacent the upper end of the receptacle for swinging movements between an inoperative closed position in said slot wherein said tip is disposed in a lower portion of said slot and an operative open position outwardly away from said slot, a closure member insertable in and withdrawable axially from the open end of said bore for supporting a lip rouge device wholly within said bore and being rotatable in the open end of the bore about the longitudinal axis thereof, said closure member provided with means adapted when the closure member is rotated to a certain position relative to said receptacle to overlie the lower portion of said slot and the applicator tip when the applicator is in inoperative position in said slot thereby to prevent swinging of said applicator from said inoperative position and arranged to release said applicator when rotated away from said certain position for swinging of the applicator to an operative position.

2,452,132
DIODE MODULATOR
Edward H. Lange, Baltimore, Md.
Application June 26, 1944, Serial No. 542,181
21 Claims. (Cl. 179—171.5)



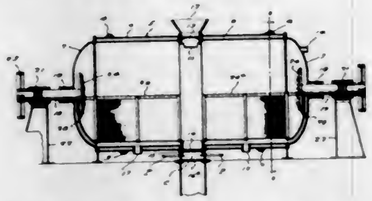
1. In a thermionic amplifier having a thermionic tube with cathode, anode, and grid, an input-impedance connected to said grid and to said cathode, and an output-impedance connected to said cathode and to said anode, a diode-modulator device for controlling phase and magnitude of alternating currents in said output-impedance, said device having a thermionic diode means including a diode-anode with said cathode, a diode-circuit connected between said diode-anode and cathode, including connections serially through a negative bias-voltage control means for controlling negative biasing of said diode-anode relative to said cathode, and through a tuned reactance-circuit capable of free electrical oscillations with small decrement at a frequency of said alternating currents; a first coupling means coupling said diode-circuit with said output-impedance, and a second coupling means coupling said tuned reactance-circuit with said input-impedance, for controlling phase and magnitude of voltages upon said input-impedance.

2,452,133
PHONOGRAPHIC APPARATUS
Richard G. Leitner and William K. Rieber, West Los Angeles, Calif., assignors, by mesne assignments, to Dictaphone Corporation, New York, N. Y., a corporation of New York
Application September 18, 1942, Serial No. 458,777
3 Claims. (Cl. 274—13)



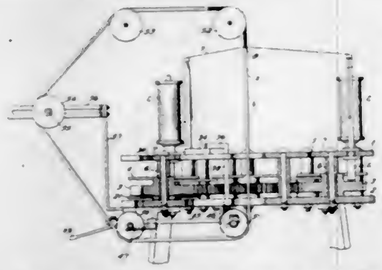
2. In phonographic apparatus having a support for a sound record and a movable carriage carrying a sound reproducing head engageable with

said record, the combination of: a motor having a driving head coupled to its armature shaft; a pair of parallel spaced discs on opposite sides of said driving head coupled to a movable shaft; mechanism connecting said movable shaft to said carriage to drive the same; an electromagnet adapted to move said disc bearing shaft to disengage one of said discs from said driving head and to en-



gage the other of said discs therewith to thereby reverse the rotation of said shaft and said carriage; a control switch for said motor; and an auxiliary switch which is closed by rotation of said apparatus in its forward direction and opened after a predetermined time upon reversal of said apparatus, said auxiliary switch acting then to open the circuit of both the motor and the electromagnet.

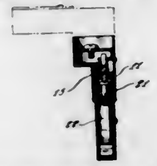
2,452,134
DEHYDRATOR
John C. Lowe, Quakertown, Pa., assignor to Harmer R. Lutz, Sellersville, Pa.
Application October 26, 1944, Serial No. 560,425
2 Claims. (Cl. 34—129)



1. In a dehydrating machine of the character described, the combination of an imperforate cylindrical casing having a top material inlet and a bottom material outlet intermediate the ends thereof, a pair of perforate drums rotatably mounted in the casing in longitudinally spaced relation to each other and at opposite sides of said material inlet and said material outlet, spiral vanes on the inner surfaces of said drums, means for circulating a gaseous heating medium through the drums and casing, said drums being open at their adjacent ends and closed at their outer ends, and means adapted for rotating said drums in opposite directions for respectively feeding the material into the drums through the adjacent open ends thereof or discharging it from the drums through the adjacent open ends thereof.

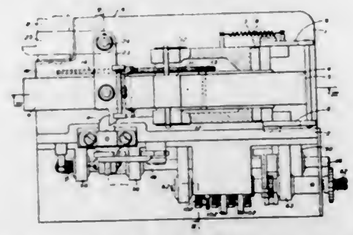
2,452,135
PAPER PULP MACHINE
John C. Lowe, Quakertown, Pa., assignor to Harmer R. Lutz, Sellersville, Pa.
Application October 26, 1944, Serial No. 560,426
1 Claim. (Cl. 92—23)

In a machine for the continuous disintegration of paper stock, the combination of a horizontal elongated cylindrical casing having a jacket adapted to have steam circulated therethrough for heating stock placed in the casing and provided with a top stock inlet and a bottom valve-controlled trash outlet intermediate its ends, means to introduce treating liquid within the upper portion of the casing, a pair of stationary perforate screening trays mounted in the lower portion of the casing in longitudinally spaced relation to each other and at opposite sides of the trash outlet, said screening trays being open at their adjacent ends, said casing further having bottom pulp outlets beneath the screening trays and at opposite sides of the trash outlet, horizontal alined shafts journaled in and centrally of the opposite ends of the casing, stock circulating and disintegrating heads secured on the inner ends of the shafts adjacent the ends of the casing and embodying discs having a plurality of concentric circular series of overlapping tangentially disposed pulping vanes on the inner faces thereof, said vanes being of narrow form laterally of the discs, and means to drive said shafts so as to rotate said heads in opposite directions to disintegrate the stock and circulate it from end to end of the casing within and above the screening trays.



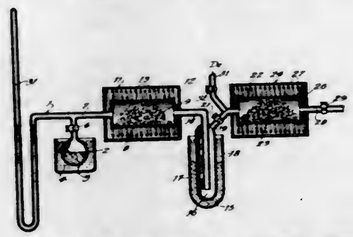
2,452,136
BRAIDING MACHINE FOR ENDLESS BELTS OR THE LIKE
Joaquin Montane Marti, New York, N. Y., assignor to The Cordwares Company, Inc., a corporation of Pennsylvania
Application June 5, 1947, Serial No. 752,595
9 Claims. (Cl. 87—33)

1. A braiding machine of the character described comprising a bed plate having adjacent intercommunicating openings, quoits defining with said openings substantially similar relatively rotatively displaced serpentine paths completely



surrounding a central hole in the plate, the plate having a slot extending from said hole to one of said paths and another slot radially aligned with the first slot and extending from the other path to the edge of the plate, movable stops respectively adjacent the intersections of the slots and paths adapted to enter the respective slots, a rod supporting each stop and a spring biasing each rod in a direction to turn the stop clear of the adjacent slot when the stop is moved out of alignment with the plate and to return the stop to the slot and into alignment with the plate when the stop is realigned with the slot.

2,452,137
FLUORESCENT LIGHTING FIXTURE
Matthew Murino, New York, N. Y.
Application April 30, 1947, Serial No. 744,896
2 Claims. (Cl. 173—328)

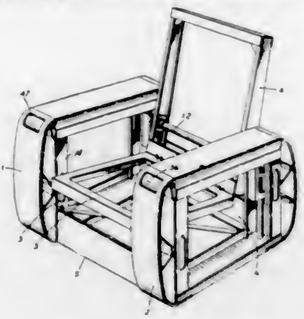


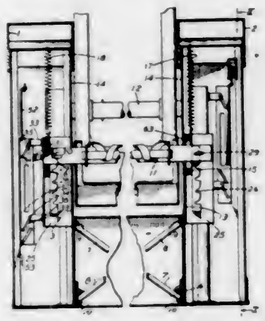
1. A bracket mounting for a fluorescent lamp comprising a base, a two part end bracket extending from the base and adapted to receive the fluorescent lamp, one part of the bracket being fixed to the base, having spring biased pin terminals, the other part being separable from the one part and having contact terminals adapted to engage respectively with the spring biased pin terminals, means for releasably securing the parts together including the provision of a dovetail groove on one part and a dovetail projection on the other part adapted to slidably engage with the dovetail groove, spring clipped terminals within the one part for receiving the end terminal of the fluorescent lamp, the contacts being in the forms of screws extending through the bracket part for retaining the spring clipped terminals and having heads with openings therein for receiving the ends of the spring biased pins of the one part, whereby the parts will be retained against displacement from one another.

2,452,138
DEVICE FOR AUTOMATICALLY INSERTING MARKING STRIPS IN PILES OF SHEETS
Laszlo Namenyi-Katz, London, England, assignor to English Numbering Machines Limited, London, England
Application October 12, 1945, Serial No. 622,073
In Great Britain July 24, 1944
4 Claims. (Cl. 93—93)

2. A device for automatically inserting marking strips in piles of sheets at predetermined numbers arranged to be associated in driving connection with the machine delivering the sheets it is desired to count, comprising in combination a roll of paper in strip form, means actuated by the associated machine for drawing said strip intermittently through the machine, means for cutting the strip into predetermined lengths, a horizontally rotatable device carrying part of said cutting means said device also serving for holding, delivering and placing the cut lengths of strip on top of a pile of sheets delivered by the associated machine, means for resetting and repositioning said rotatable holding and delivery device into its operative position to cut a further length from said strip and hold same until a further predetermined number of sheets have been delivered by the associated machine, said resetting and positioning means being actuated and controlled by a switch-over mechanism embodying a spindle having a partial rotative movement in two directions effected by a rocker element and an axial movement in two directions imparted by a ratchet mechanism, a pre-setting mechanism for controlling the sequence of movements, and a plurality of electrical contacts actuated by said pre-setting mechanism serving to establish a circuit through a battery and electromagnets and thereby regulating the periodic delivery of the strips.

2,452,139
METHOD OF PREPARING URANIUM DEUTERIDE
Amos S. Newton, Ames, Iowa, assignor to the United States of America as represented by the United States Atomic Energy Commission
Application July 22, 1944, Serial No. 546,179
7 Claims. (Cl. 23—204)

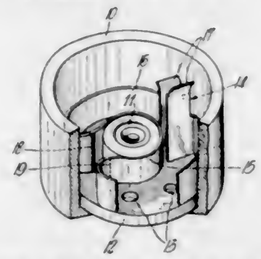




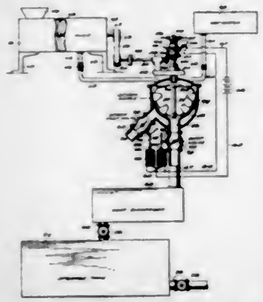
7. A method of preparing uranium deuteride which comprises introducing a composition in which the preponderant liquid aqueous component is deuterium oxide into a closed system having three zones communicating in series, introducing a reducing metal into the second zone and uranium metal into the third zone, heating the deuterium oxide whereby deuterium oxide vapor is generated and forced into the second zone, heating the second zone to cause interaction of the reducing metal with the vapor and generate deuterium gas which is forced by the incoming vapor into the third zone and heating the third zone to react the deuterium with the uranium.

2,452,140
ADJUSTABLE CHAIR
Charles Maxwell Roscoe de Buire Panter, Harlington, England, assignor to Shrager Bros. Limited, London, England
Application May 7, 1946, Serial No. 667,874
In Great Britain May 7, 1945
3 Claims. (Cl. 155—118)

1. An adjustable chair comprising a framework embodying two side frames constituting the arms

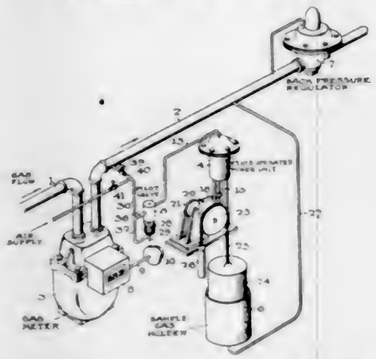


and sides of the chair, means for securing said frames in rigid relationship, a back frame and a seat frame hinged together, the back frame being pivoted adjacent the lower end thereof and the seat frame being pivoted adjacent its front end, on tubular supporting members each of which is



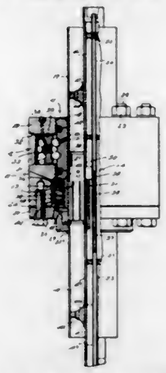
provided with a spring controlled rod furnished with cross pins for engaging a rack element secured in the side frames, and means mounted in said side frames for actuating said spring controlled rods to effect the release of the cross pins thereon from said rack elements when it is desired to vary the position of the seat and back frames.

2,452,141
DIE HOLDER
Joseph R. Pasdertz, Joliet, Ill.
Application October 29, 1947, Serial No. 782,883
8 Claims. (Cl. 51—217)



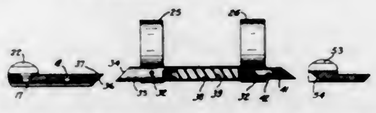
1. A holder for positioning wire drawing dies in a cylindrical cup during grinding or lapping thereof comprising an elastic member having a die encompassing convolution, a cup engaging convolution, and means adapted to be manually gripped for inserting and removing the die holder and die from the cup.

2,452,142
VISCOSITY CONTROL
Joseph S. Pecker, Philadelphia, Pa., assignor of one-half to Anne G. Pecker, Philadelphia, Pa.
Application December 23, 1942, Serial No. 469,951
12 Claims. (Cl. 127—28)



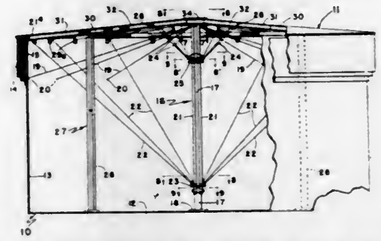
1. In means for controlling the viscosity of mixtures treated in a steam kettle including a chamber for containing said mixtures, in combination, normally operative means for heating said chamber, valve means normally closed and operating to retain said mixtures in said chamber, agitation means in said chamber, a power train for operating said agitation means including an overload clutch responsive to a predetermined degree of resistance to the operation of said agitation means to open said power train and to simultaneously open said valve means and for rendering said heating means inoperative.

2,452,143
FLUID SAMPLING SYSTEM
Joseph A. Pellettere, Pittsburgh, Pa., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 26, 1947, Serial No. 788,216
9 Claims. (Cl. 73—421.5)



1. A device for incrementally accumulating a composite sample of gas from a flowing stream thereof comprising a gas conduit adapted to convey a flowing stream of gas, pressure regulating means to maintain substantially uniform pressure in said gas conduit, a meter interposed in said gas conduit, a gas holder to receive the desired sample, a sampling tube connecting said gas conduit and said gas holder, a power unit adapted to increase the capacity of said gas holder by a fixed increment at each actuation of the power unit, a pilot valve to supply energizing force to the said power unit and means operatively controlled by the said meter to actuate the pilot valve each time a predetermined volume of gas passes through the said meter.

2,452,144
ELECTRICAL SWING JOINT
Dwight M. Phillips, Fullerton, Calif., assignor to Chiksan Tool Company, Brea, Calif., a corporation of California
Application July 28, 1943, Serial No. 496,442
1 Claim. (Cl. 174—21)

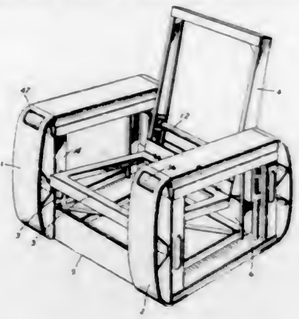


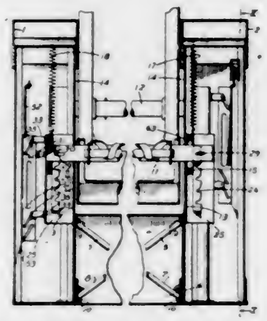
An electrical connection including two tubular sections, outer tubular conductors rigid with the sections with their ends spaced apart, means connecting the sections for relative turning, a contact sleeve between the ends of the conductors and fixed in one section and engaging in the other section, and means for sealing between the sections including an assembly of chevron type sealing rings sealing between telescoping parts of the sections and in communication with the space between the ends of the conductors to be actuated by fluid pressure from said conductors.

2,452,145
TELESCOPE SIGHT MOUNTING
Ralph H. Pike, Kalispell, Mont.
Application June 25, 1946, Serial No. 679,155
2 Claims. (Cl. 33—50)

1. Means for detachably mounting a telescope, having a tube upon the upper side of a firearm having a barrel, comprising spaced front and rear saddles mounted on said firearm, each of said saddles having a pair of spaced shoulders thereon formed to engage the telescope tube and support said telescope in a fixed position of alignment with respect to said barrel, a base member on said telescope having at its rear end a spring-pressed plunger, cooperating flat faces on said front saddle and the front of said base, a V-shaped angular face on said rear saddle and a cooperating arcuate angular face on said plunger, said four cooperating faces being so oriented that when the telescope is mounted on the firearm with the base located between the saddles the pressure of the spring-pressed plunger tends to urge the tube into contact with the spaced shoulders of the saddles.

2,452,146
TANK TOP
Fred L. Plummer, Warren, Pa., assignor to Hammond Iron Works, Warren, Pa., a corporation of Pennsylvania
Application October 5, 1944, Serial No. 557,288
4 Claims. (Cl. 48—176)

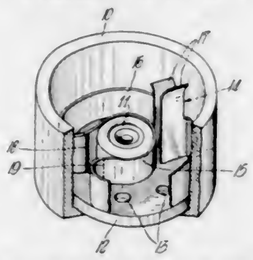




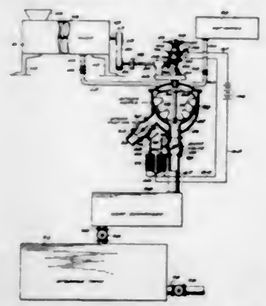
1. A tank construction having a tank, a cover vertically movable in sealing relationship with the tank providing a variable gas-holding space, and means for stabilizing the cover during its vertical movement comprising a stationary guide member upstanding in the tank, a movable guide member carried by the cover and having telescopic engagement with the stationary guide member whereby one of said guide members becomes the surrounding one and the other guide member becomes the surrounded one, the surrounded guide member having a first pair of vertical guide faces parallel to and opposing each other as well as a second pair of vertical guide faces parallel to and opposing each other extending at right angles to said first pair of guide faces, the surrounding guide member having vertical openings adapted to have extend therethrough radial stay members hereinafter defined, a first set of stay members cover, the stay members of the surrounded guide member to the tank wall, a second set of stay members extending radially from the movable guide member to the marginal portion of the cover, the stay members of the surrounded guide member extending through the vertical openings of the surrounding guide member, a first set comprising an upper and a lower pair of anti-friction rollers mounted upon the surrounding guide member and engaging said first pair of guide faces, and a second set comprising an upper and a lower pair of anti-friction rollers mounted upon the surrounding guide member and engaging said second pair of guide faces.

2,452,147
TRAINING MECHANISM FOR FIREARMS
Frank W. Reinhold, Beverly, and John J. Maciejowski, Ipswich, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application May 9, 1945, Serial No. 592,864. Divided and this application March 19, 1947, Serial No. 735,772
2 Claims. (Cl. 89—41)

1. In a firearm, a support freely rotatable in azimuth, a gun freely rotatable in elevation upon the support, and means constructed and arranged to enable a gunner to move the gun manually in elevation with relation to the support, said means comprising a lever, a bracket which is carried by the lever and is securable in at least two different operative positions upon said lever, a rack secured to said support, and a pinion and a crank therefor both rotatably mounted in the bracket, said pinion when the bracket is in one of its operative positions upon the lever being in meshing

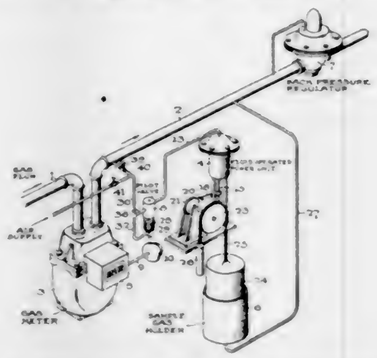


and sides of the chair, means for securing said frames in rigid relationship, a back frame and a seat frame hinged together, the back frame being pivoted adjacent the lower end thereof and the seat frame being pivoted adjacent its front end, on tubular supporting members each of which is



provided with a spring controlled rod furnished with cross pins for engaging a rack element secured in the side frames, and means mounted in said side frames for actuating said spring controlled rods to effect the release of the cross pins thereon from said rack elements when it is desired to vary the position of the seat and back frames.

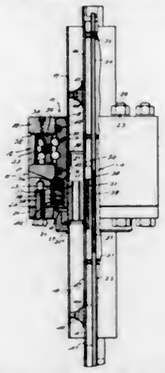
2,452,141
DIE HOLDER
Joseph R. Pasdertz, Joliet, Ill.
Application October 29, 1947, Serial No. 782,883
8 Claims. (Cl. 51—217)



1. A holder for positioning wire drawing dies in a cylindrical cup during grinding or lapping thereof comprising an elastic member having a die encompassing convolution, a cup engaging convolution, and means adapted to be manually gripped for inserting and removing the die holder and die from the cup.

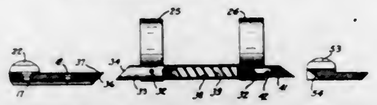
2,452,142
VISCOSITY CONTROL
Joseph S. Pecker, Philadelphia, Pa., assignor of one-half to Anne G. Pecker, Philadelphia, Pa.
Application December 23, 1942, Serial No. 469,951
12 Claims. (Cl. 127—28)

1. In means for controlling the viscosity of mixtures treated in a steam kettle including a chamber for containing said mixtures, in combination, normally operative means for heating said chamber, valve means normally closed and operating to retain said mixtures in said chamber, agitation means in said chamber, a power train for operating said agitation means including an overload clutch responsive to a predetermined degree of resistance to the operation of said agitation means to open said power train and to simultaneously open said valve means and for rendering said heating means inoperative.



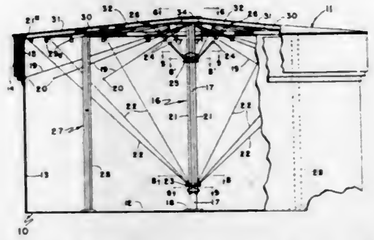
2,452,143
FLUID SAMPLING SYSTEM
Joseph A. Pellettere, Pittsburgh, Pa., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 26, 1947, Serial No. 788,216
9 Claims. (Cl. 73—421.5)

1. A device for incrementally accumulating a composite sample of gas from a flowing stream thereof comprising a gas conduit adapted to convey a flowing stream of gas, pressure regulating means to maintain substantially uniform pressure in said gas conduit, a meter interposed in said gas conduit, a gas holder to receive the desired sample, a sampling tube connecting said gas conduit and said gas holder, a power unit adapted to increase the capacity of said gas holder by a fixed increment at each actuation of the power unit, a pilot valve to supply energizing force to the



said power unit and means operatively controlled by the said meter to actuate the pilot valve each time a predetermined volume of gas passes through the said meter.

2,452,144
ELECTRICAL SWING JOINT
Dwight M. Phillips, Fullerton, Calif., assignor to Chiksan Tool Company, Brea, Calif., a corporation of California
Application July 28, 1943, Serial No. 496,442
1 Claim. (Cl. 174—21)

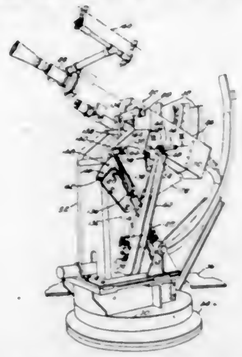


An electrical connection including two tubular sections, outer tubular conductors rigid with the sections with their ends spaced apart, means connecting the sections for relative turning, a contact sleeve between the ends of the conductors and fixed in one section and engaging in the other section, and means for sealing between the sections including an assembly of chevron type sealing rings sealing between telescoping parts of the sections and in communication with the space between the ends of the conductors to be actuated by fluid pressure from said conductors.

2,452,145
TELESCOPE SIGHT MOUNTING
Ralph H. Pike, Kalispell, Mont.
Application June 25, 1946, Serial No. 679,155
2 Claims. (Cl. 33—50)

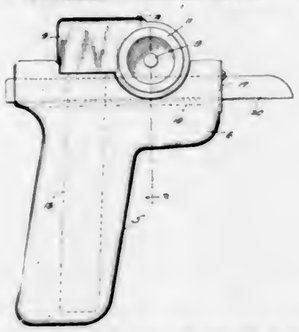
1. Means for detachably mounting a telescope, having a tube upon the upper side of a firearm having a barrel, comprising spaced front and rear saddles mounted on said firearm, each of said saddles having a pair of spaced shoulders thereon formed to engage the telescope tube and support said telescope in a fixed position of alignment with respect to said barrel, a base member on said telescope having at its rear end a spring-pressed plunger, cooperating flat faces on said front saddle and the front of said base, a V-shaped angular face on said rear saddle and a cooperating arcuate angular face on said plunger, said four cooperating faces being so oriented that when the telescope is mounted on the firearm with the base located between the saddles the pressure of the spring-pressed plunger tends to urge the tube into contact with the spaced shoulders of the saddles.

2,452,146
TANK TOP
Fred L. Plummer, Warren, Pa., assignor to Hammond Iron Works, Warren, Pa., a corporation of Pennsylvania
Application October 5, 1944, Serial No. 557,288
4 Claims. (Cl. 48—176)



1. A tank construction having a tank, a cover vertically movable in sealing relationship with the tank providing a variable gas-holding space, and means for stabilizing the cover during its vertical movement comprising a stationary guide member upstanding in the tank, a movable guide member carried by the cover and having telescopic engagement with the stationary guide member whereby one of said guide members becomes the surrounding one and the other guide member becomes the surrounded one, the surrounded guide member having a first pair of vertical guide faces parallel to and opposing each other as well as a second pair of vertical guide faces parallel to and opposing each other extending at right angles to said first pair of guide faces, the surrounding guide member having vertical openings adapted to have extend therethrough radial stay members hereinafter defined, a first set of stay members cover, the stay members of the surrounded guide member to the tank wall, a second set of stay members extending radially from the movable guide member to the marginal portion of the cover, the stay members of the surrounded guide member extending through the vertical openings of the surrounding guide member, a first set comprising an upper and a lower pair of anti-friction rollers mounted upon the surrounding guide member and engaging said first pair of guide faces, and a second set comprising an upper and a lower pair of anti-friction rollers mounted upon the surrounding guide member and engaging said second pair of guide faces.

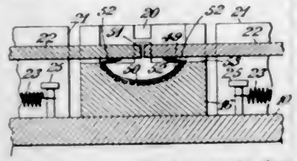
2,452,147
TRAINING MECHANISM FOR FIREARMS
Frank W. Reinhold, Beverly, and John J. Maciejowski, Ipswich, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Original application May 9, 1945, Serial No. 592,864. Divided and this application March 19, 1947, Serial No. 735,772
2 Claims. (Cl. 89—41)



1. In a firearm, a support, freely rotatable in azimuth, a gun freely rotatable in elevation upon the support, and means constructed and arranged to enable a gunner to move the gun manually in elevation with relation to the support, said means comprising a lever, a bracket which is carried by the lever and is securable in at least two different operative positions upon said lever, a rack secured to said support, and a pinion and a crank therefor both rotatably mounted in the bracket, said pinion when the bracket is in one of its operative positions upon the lever being in meshing

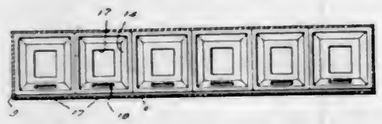
engagement with the rack and when the bracket is in another operative position upon the lever

being held in an inoperative position away from said rack.



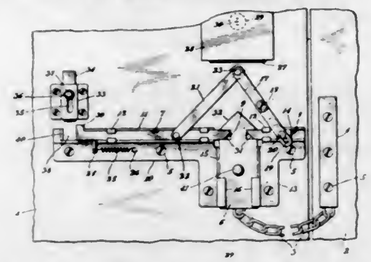
2,452,148
ADJUSTABLE KEYHOLE SAW
Curtis Lee Rhodes, Ripley, W. Va.
Application October 23, 1945, Serial No. 624,074
2 Claims. (Cl. 145—108)

2. In a hand saw, a handle having a saw blade receiving slot one side wall of which is formed with a notch, a yieldable saw clamp plate positioned within said blade receiving slot, a flange formed along one edge of the plate and being fitted in the notch, securing the plate against twisting, one end of the plate being curved downwardly to contact said one side wall of the saw blade receiving slot, a bolt extending transversely through the handle slot and plate, said plate adapted to clamp the saw blade against said one side wall of the saw blade receiving slot, and a nut on the bolt adapted to engage the saw plate moving the saw plate into clamping engagement with the saw blade positioned in the slot.



2,452,149
METHOD AND APPARATUS FOR COVERING A SCALE FOR THE HANDLE OF A POCKET KNIFE
Paul Richartz, Sheffield, England
Application September 22, 1945, Serial No. 617,997
4 Claims. (Cl. 18—19)

1. An apparatus for covering a scale for a pocket knife with deformable sheet material, comprising a press, a mould having a cavity shaped to fit said scale and so that the edges of the scale lie beneath the face of the mould by an amount greater than the thickness of the sheet material, a reciprocable press tool vertically operated by said press and adapted to force said sheet material backed by the scale into the mould, said press tool having a width equal to the width of the scale to contact the entire width of the scale during the pressing operation and said material having its marginal edges projecting from the mould, laterally slidable shutters movable horizontally and associated with said mould to engage said marginal edges, means for applying reciprocable movement to said shutters so that they slide on the surface of said mould into engagement with the marginal edges of the material, and means for applying reciprocable movement to said shutters, and means for heating said mould.

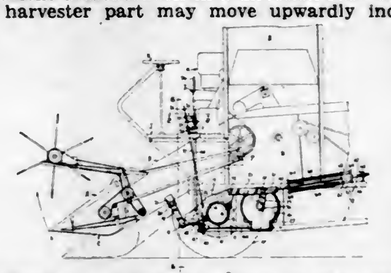


4. A method of covering a scale for a pocket knife with deformable sheet material which consists in placing the sheet material over the cavity in a mould shaped to the contour of the scale, placing the scale on the sheet material over the cavity, vertically moving a press tool on the scale and sheet material to force them into the cavity and thereafter moving the press tool out of the cavity, said material being so dimensioned that its marginal edges project away from the mould and from the edges of the scale, applying lateral forces to said marginal edges by horizontally movable shutters over an area spaced away from the edges of the scale by an amount greater than the thickness of the material to bend the material over the edge without excessive stretching, and vertically moving the press tool against the bent sheet material to apply pressure on the bent over marginal portions in a direction towards the face of the scale to force the marginal edges against the inside of the scale.

2,452,150
EGG CARTON
Wesley J. Roberts, North Little Rock, Ark.
Application June 19, 1945, Serial No. 600,343
5 Claims. (Cl. 229—15)

1. A packing container for shipping, storing and candling eggs comprising an elongated carton having a plurality of openings in the front wall thereof uniformly spaced apart longitudinally of said wall, and an equal number of similarly spaced-apart openings in the bottom wall thereof, and a plurality of individual egg trays disposed in side-by-side arrangement in said carton, each of said individual trays comprising four downwardly-converging inner walls, outer walls and a bottom, said bottom having an opening therein registering with a corresponding opening in the bottom wall of said carton and one of said inner walls and the adjacent outer wall having registering openings therein registering with a corresponding opening in the front wall of said carton.

2,452,151
CHAIN AND LOCK MECHANISM
Bert D. Robins, New York, N. Y.
Application January 21, 1947, Serial No. 723,411
7 Claims. (Cl. 70—93)



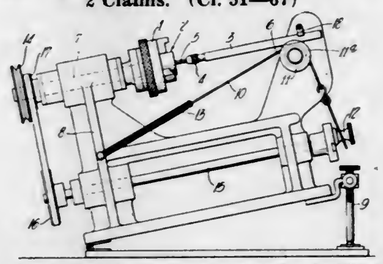
1. Lock mechanism comprising a member for the inner face of a door or the like, a flexible element to attach said member to a fixed structure adjacent said door, movable means on the door to engage said member and hold it in securing position, said means including a pair of slidable bolts, one at each side of the member, and movable parts connecting said bolts so that they move in unison.

2,452,152
PROCESS OF FORMING POLYVINYL FORMAL COATINGS ON TEXTILES
James Henry Rooney, John Henry Sharphouse, and Philip Richard Hawtin, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application December 31, 1943, Serial No. 516,530. In Great Britain January 25, 1943
7 Claims. (Cl. 117—76)

6. Process for the production of a textile fabric which is resistant to penetration by mustard gas and by water, which comprises spreading an aqueous solution of polyvinyl alcohol on a single-layer cellulose fabric, removing water by evaporation whereby an adherent film of polyvinyl alcohol is formed on the fabric, treating the film with a dilute solution of formaldehyde and an inorganic acid as catalyst in aqueous acetone containing 2 to 3 volumes of acetone for each volume of water, the amount of formaldehyde used being such that 20%–45% of the hyroxyl groups in the polyvinyl alcohol are acetalized, and, while its moisture content is high, providing on both sides of the material so produced a coating consisting of a water-insoluble soap.

2,452,153
HARVESTER PLATFORM ADJUSTING MEANS
Martin Ronning, St. Louis Park, and Kenneth M. Keith, Minneapolis, Minn., assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware
Application December 31, 1943, Serial No. 516,564
8 Claims. (Cl. 56—208)

1. In a combine having a harvester part mounted for up and down adjustments, means for raising and lowering the harvester part comprising an arcuately movable member mounted on the combine and connected by a link to the harvester, a rotary operating member for oppositely adjusting said movable member to thereby raise and lower the harvester part, and means forming a lost motion connection between the said members and permitting limited relative movement therebetween in a direction such that the harvester part may move upwardly inde-

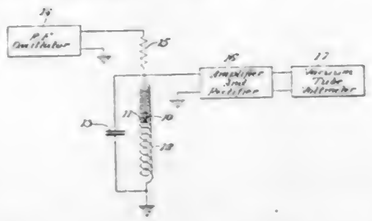


pendently of the rotated position of said rotary operating member.

2,452,154
BROMINATION
John Ross, Ramsey, N. J., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application April 15, 1942, Serial No. 439,103
10 Claims. (Cl. 260—593)

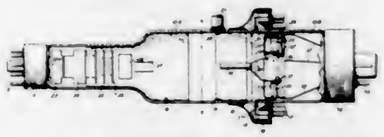
1. The process of brominating organic compounds which comprises reacting bromine with an organic compound in liquid sulphur dioxide.

2,452,155
WORKING THE DIE HOLE CONTOUR OF A WIRE DRAWING DIE
Walter Rybicki, Garfield Heights, Ohio
Application July 7, 1945, Serial No. 603,673
2 Claims. (Cl. 51—67)



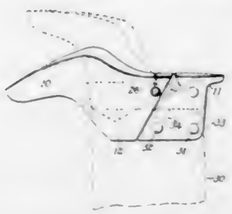
2. A machine including means for holding and rotating a wire drawing die about its axis in a tilted position, a spindle having an end for mounting a tool for working the die hole contour of said die, a reciprocating surface spaced opposite the face of said die at an elevation holding said spindle tilted when said tool is mounted by said end and is resting in said die hole and said spindle is resting on said surface, said surface comprising a length of flexible material bent around a wheel rotatively journaled by said frame at right angles to said spindle, and means for reciprocating said length of flexible material, said wheel being positioned so that when said spindle is resting tangentially on said length bent therearound said spindle is held as described.

2,452,156
FLOAT POSITION INDICATOR
Donald S. Schover, Chicago, Ill., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application September 24, 1945, Serial No. 618,356
5 Claims. (Cl. 177—351)



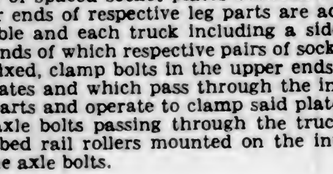
5. An electrical indicating system comprising a displaceable member the position of which is to be

indicated, a radio frequency oscillator, a resonant circuit including a condenser and an inductance coil connected to said oscillator, and means responsive to variations in the I. R. drop across said resonant circuit, the displaceable member including a metal portion movable axially



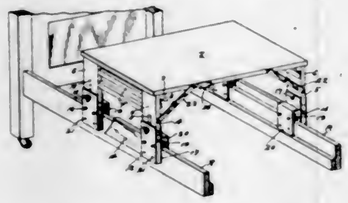
of the inductance coil, and said coil having along its entire length a variable number of turns per unit length so as to provide a straight-line relationship between the I. R. drop across the resonant circuit and the position of the displaceable member.

2,452,157
ELECTRON DISCHARGE APPARATUS
Raymond W. Sears, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 10, 1947, Serial No. 760,012
16 Claims. (Cl. 315—21)



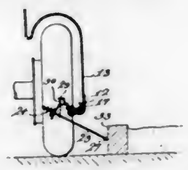
1. Electron discharge apparatus comprising a plurality of targets arranged in two adjacent rows, the targets in the two rows being in staggered relation, means for projecting an electron beam toward said targets, and means for deflecting said beam to sweep it successively over adjacent targets in said two rows.

2,452,158
SHOE FORM
Paul W. Senfleben, Malden, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 31, 1947, Serial No. 783,293
5 Claims. (Cl. 12—124)



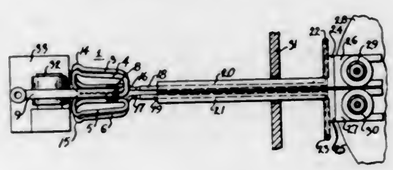
1. A last comprising a forepart having a heightwise cleft in its rear end, an individual heel part having a tongue rigidly related thereto and extending into said cleft, and a pivot member having two spaced bearing portions and a smaller portion connecting them, said tongue having a slot narrower than said bearing portions through which said smaller portion extends, and the forepart having a bore in which said bearing portions are seated.

2,452,159
SPECTACLES WITH READILY REMOVABLE LENSES
Giltner S. Small, Sacramento, Calif.
Application May 28, 1945, Serial No. 596,171
6 Claims. (Cl. 88—41)



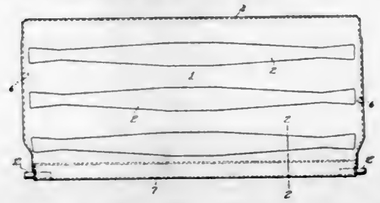
2. In spectacles with removable lenses having lens frames and temples hinged thereto, a shoulder in each lens frame for supporting a lens therein, a flange at one side of the frame for retaining the lens against the shoulder, and a slidably mounted retaining member carried by the temple hinge structure at the opposite side of the frame adapted to project over an edge of the lens to retain it against the shoulder and to be retracted to a position permitting removal of the lens.

2,452,160
SHIFTABLE BED RAIL TABLE
Roman L. Smith, Los Angeles, Calif.
Application June 30, 1945, Serial No. 602,543
4 Claims. (Cl. 311—26)



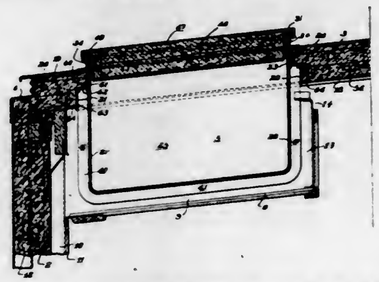
1. A bed table including a top element to be transversely mounted over a bed, pairs of coplanar, spaced and rigidly connected leg parts and which pairs are hingedly connected at their upper ends to the ends of said element to be folded inwardly thereunder when not in table use, foldable, stabilizing braces connecting said element and the leg parts, means to fasten the leg parts in infolded position to the said element, and a pair of bed rail trucks including upright pairs of spaced socket plates between which the lower ends of respective leg parts are adjustably slidable and each truck including a side bar on the ends of which respective pairs of socket plates are fixed, clamp bolts in the upper ends of pairs of plates and which pass through the interposed leg parts and operate to clamp said plates thereon, axle bolts passing through the truck plates, and bed rail rollers mounted on the inner ends of the axle bolts.

2,452,161
PARKING GUIDE
Harold B. Squires, Los Angeles, Calif.
Application January 23, 1948, Serial No. 3,991
2 Claims. (Cl. 116—28)



2. A parking guide for vehicles wherein the vehicle has a fender, a clamp structure for attachment to the lower edge of the fender, said clamp structure being provided with an inclined depending plate having an opening therein, an elongated parking guide rod, slidably disposed through the opening, a coiled compression spring, having one end secured to the top side of the inclined plate and its upper end secured to the adjacent end of the guide rod, said clamp structure being provided with a riser and a tension spring, having one end secured to the riser and its other end supporting a medial portion of said rod.

2,452,162
INDUCTION HEATING COIL
Robert J. Stanton, Brooklyn, and Christopher Lowry, New York, N. Y., assignors to Induction Heating Corp., New York, N. Y., a corporation of New York
Application September 6, 1945, Serial No. 614,688
1 Claim. (Cl. 219—47)



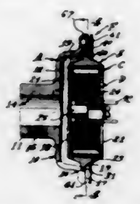
An induction heating coil comprising a length of tubular conductor wound in a plurality of generally helical spaced convolutions of approximately the same dimensions, said convolutions merging into one another in succession continuously from one end of the conductor to the other, a plurality of such convolutions being arranged substantially parallel to a first plane, another plurality thereof being arranged substantially parallel to a second plane intersecting the first and forming thereby a dihedral angle adapted to receive therein a portion of an object to be heat treated, said convolutions all having substantially straight portions disposed in substantially parallel positions along a third plane which is parallel to the line of intersection of said first and second planes, at least four of such parallel portions thus being provided along said third plane for generally conforming to a surface portion of said object to be heated, the remaining portions of the convolutions diverging from said plane at either side along said first and second planes, and a pair of high frequency energizing terminals connected respectively to the ends of said conductor at the first and last of the successive convolutions.

2,452,163
DROP ENDGATE FOR RAILWAY CARS
James S. Swann, Homewood, Ill., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application November 1, 1944, Serial No. 561,350
11 Claims. (Cl. 105—258)

1. A sheet metal panel adapted to form a load retaining means of a railway car comprising a metallic sheet having a main portion provided with an inwardly projecting side flange, a channel-shaped stiffener having one flange thereof secured to said side flange and the other flange thereof secured to the inside of said sheet in spaced relation to said side flange to form a hollow reinforcing member, the web of said stiffener being arcuate, a pintle secured within the arcuate web of said stiffener and extending laterally therebeyond to form a journal to pivotally attach said panel on a railway car, and means for closing the ends of said member around said pintle.

2,452,164
REFRIGERANT CONTAINER CONSTRUCTION FOR RAILWAY REFRIGERATOR CARS
Alfred L. Thompson, Munster, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application November 13, 1946, Serial No. 709,619
13 Claims. (Cl. 62—17)

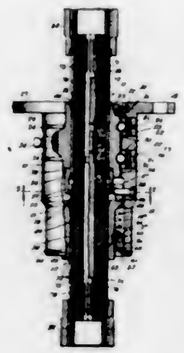
1. A refrigerant container for use in a railway car having spaced carlines and spaced purlins secured together to form a frame and roof sheets supported by said frame; said container comprising vertical side walls and vertical end walls and a bottom, the distances over the side walls and end walls, respectively, of the container being substantially the same as the distances between the purlins and carlines, respectively, of the frame, and a reinforcing member straddling and secured to the upper margin of said walls and having a lateral flange overlapping the margin of said roof sheets supported by said frame, whereby the container may be installed in or removed from the car through the frame from the exterior of the car without disturbing the frame or roof sheets.



2,452,165
HETEROPOLYMER OF ISOPROPENYL ACETATE AND MALEIC ANHYDRIDE
Cornelius C. Unruh and William O. Kenyon, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application November 27, 1945, Serial No. 631,215
5 Claims. (Cl. 260—78.5)

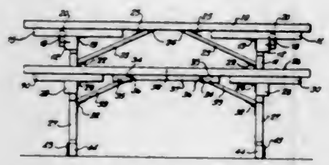
1. A resinous heteropolymer of isopropenyl acetate and maleic anhydride, the molar ratio of isopropenyl acetate to maleic anhydride being 1:1.

2,452,166
ALKYLATION OF ISOBUTANE WITH ETHYLENE
Herbert E. Vermillion, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application October 26, 1945, Serial No. 624,951
2 Claims. (Cl. 260—683.4)



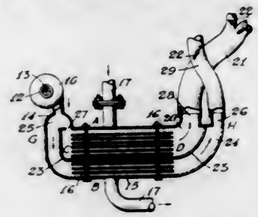
1. In the continuous alkylation of isobutane with ethylene in the presence of an alkylation catalyst consisting essentially of a major proportion of substantially anhydrous liquid HF and a minor proportion of BF_3, the improvement which comprises maintaining a body of substantially anhydrous liquid HF and hydrocarbons in a liquid filled reaction zone maintained under alkylating conditions including an operative acid to hydrocarbon volume ratio of at least about 0.8, continuously introducing a charge of isobutane in liquid phase and ethylene, with the isobutane in substantial molar excess of the ethylene, into said reaction zone, also continuously introducing along with the hydrocarbon feed into said reaction zone BF_3 at a rate of not more than 4 grams of BF_3 per pound of hydrocarbon charged, maintaining the temperature of said reaction zone within the range of −30 to 15° F., at a pressure of at least 150 pounds per square inch to keep the BF_3 absorbed in the liquid filled reaction zone mixture, continuously discharging a stream of hydrocarbon reaction products and recovering therefrom a total debutanized liquid alkylate containing at least 65% by volume of 2,3-dimethylbutane.

2,452,167
ROTARY HOOK
George R. Wainwright, Glendale, Calif., assignor, by mesne assignments, to William H. Maxwell, Los Angeles, Calif.
Application October 2, 1944, Serial No. 556,723
8 Claims. (Cl. 112—228)



3. In a mechanism of the character described, a hook unit having a flange at its forward end, a bobbin case base supported in the unit at the flange, means carried by the flange yieldingly retaining the base in the unit, and a thread guard supported at the forward end of the unit and from the flange independent of said means.

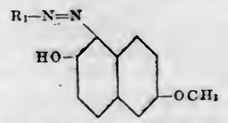
2,452,168
SWIVEL TYPE COAXIAL CONNECTOR
Doyle Warren, Monrovia, Calif., assignor to Chiksan Tool Company, Brea, Calif., a corporation of California
Application March 1, 1945, Serial No. 580,390
6 Claims. (Cl. 173—324)



1. In a device of the character described, a coupling element having a longitudinal bore extending through it, a rotational element entering the coupling from one end and including a sleeve fitting the bore and a coupling part at the exterior of the coupling element, an annular row of ball bearings mounting the sleeve in the bore for rotation without axial movement, a rigid axially shiftable element entering the coupling from the other end and including a coupling part at the exterior of the coupling element and a sleeve fitting the bore, a part projecting from the coupling element into the bore and engaging the last mentioned sleeve holding it against rotation in the coupling, the rotational element having a central bearing ring projecting from its inner end and the axially shiftable element having a plurality of longitudinally disposed contact fingers projecting from its inner end and bearing in the ring, and means normally yieldingly urging the axially shiftable element inwardly in the coupling.

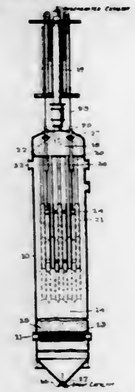
2,452,169
FOLDING PICNIC TABLE
Robert Wells, Kankakee, Ill.
Application September 26, 1946, Serial No. 699,538
6 Claims. (Cl. 155—123)

6. A combination foldable picnic table and seats, comprising a table top, guides upon opposite ends of the bottom thereof, legs having crossbars having means slidably engaging said guides, means cooperating between the guides and the cross-bars to maintain the legs in upright supporting positions, braces between the legs and the bottom of the table top, seats, legs hinged thereto, braces hinged to the seat legs and slidable at their inner ends, means carried by the bottom surfaces of the seats to engage said ends and hold the seat legs in supporting positions, base sections on said legs pivotally connected in line with the side edges of the table top and inner edges of the seats and simultaneously swingable inwardly in the same arc with the legs of the table top moving outwardly in the guides, the pivotal connection of the base section permitting the seats and their folded legs to be folded over the table top and its overlying legs, and means to connect the table top and seats in folded relation.



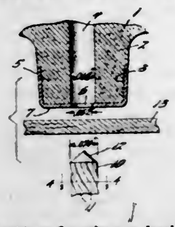
2,452,170
AIR HEATER FOR MOTOR VEHICLES
Clifton E. Wenger, Detroit, Mich.
Application November 25, 1946, Serial No. 712,136
3 Claims. (Cl. 257—241)

1. An air heater for use in and about closed vehicles propelled by an internal combustion engine, comprising in succession, a blower, an inlet header, an enclosed heating chamber, and a discharge header, the said headers and heating chamber being longitudinally divided into two separate air passages, one of which has a relatively large inlet and a relatively small outlet as compared with the other such passage, the sodivided heating chamber having disposed in each compartment thereof a plurality of thin metal plates, parallel to one another, said plates being spaced apart sufficiently to permit uninterrupted passage of air therebetween, and extending transversely across the heater and being in heat conducting contact with opposed walls thereof, one of which is externally adapted to fit snugly against the exhaust pipe of such a vehicle to transmit heat by conduction through said wall to the said thin metal plates.



2,452,171
METALLIZABLE MONOAZO DYES
Fritz Straub, Kaiseraugst, Willy Widmer, Bottmingen, and Hermann Schneider, Riehen, Switzerland, assignors to Ciba Limited, a Swiss firm
No Drawing. Application April 28, 1944, Serial No. 533,248. In Switzerland December 22, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 22, 1962
4 Claims. (Cl. 260—197)

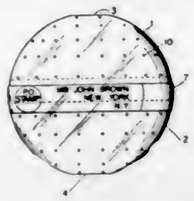
1. Azo dyestuffs of the general formula



wherein R_1 stands for the radical of an ortho hydroxy diazo component of the benzene series.

2,452,172
METHOD FOR CATALYTIC CRACKING OF HYDROCARBON OILS
Herbert B. Willard, Port Arthur, Tex., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 17, 1945, Serial No. 622,812
4 Claims. (Cl. 196—52)

1. In a process of contacting hydrocarbons with solid catalytic material by continuously passing a stream of hydrocarbons through a moving bed of said catalyst, wherein active catalyst is continuously supplied to the top of said catalyst bed, spent catalyst is continuously withdrawn from the bottom of said catalyst bed, and the spent catalyst is regenerated and returned to the top of said catalyst bed, the improvements which comprise reducing the space velocity of the hydrocarbons through said catalyst bed by increasing the volume of the bed as the average activity of catalyst entering the catalyst bed diminishes, without interrupting the flow of hydrocarbons therethrough, while maintaining otherwise substantially uniform operating conditions throughout the process, thereby obtaining a substantially uniform rate of conversion and yield of products.



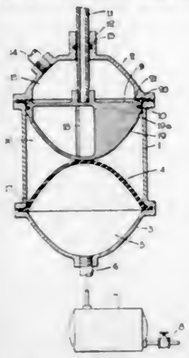
2,452,173
PLASTIC BUTTON
William A. Zwiebel, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a corporation of Connecticut
Application July 19, 1946, Serial No. 684,734
3 Claims. (Cl. 24—94)

3. A plastic button having a hub, said hub provided with a bore, a ferrule fitted over the free end of the hub, said ferrule provided with an opening in its closed face registering with the bore, the diameter of the opening in the ferrule being less than the diameter of the bore, together with a fluted tack whose root diameter is substantially that of the diameter of the opening in the ferrule but less than the diameter of the bore in the hub, whereby the material to which the

button is to be attached will be supported and cleanly cut when the tack is driven into the cloth and up into the bore during an attaching operation.

2,452,174
PACKAGING
Frank B. Arnold, New York, N. Y.
Application August 31, 1946, Serial No. 694,195
3 Claims. (Cl. 99—171)

1. A commercial package comprising a fruit and a container enclosing the same comprising two generally hemispherical, pre-formed, form-retaining halves meeting at their edge portions and secured together, said halves being made of strong, flexible, transparent, shock-resisting plastic material capable of withstanding handling and shipment by mail, and each having a number of holes distributed over the area thereof to permit the venting of gases and moisture and the breathing of the fruit, the inside of said enclosing container in contour and size being substantially the shape as the contour and size of the fruit which it encloses.



2,452,175
LINE SECURING DEVICE
Samuel Lawrence Atkins, New York, N. Y.
Application December 6, 1945, Serial No. 633,235
2 Claims. (Cl. 24—137)

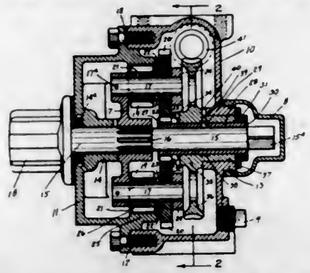
1. A line securing device having a cross member, three spaced fingers extending in the same general direction from one side of and integral with said cross member, said fingers each having a groove at the end nearer said cross member and a tapered portion near the free end, the outer fingers being tapered on one side while the intermediate finger is tapered on the opposite side, the tapered portion on each finger being gradual and continuous in the same direction and substantially only on the side on which the groove is formed, the other side of the each finger opposite the tapered side being substantially straight and substantially perpendicular to the cross member.

2,452,176
FLUID PRESSURE CONTROLLED ACTUATOR
Arthur J. Bent, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 14, 1945, Serial No. 582,717
4 Claims. (Cl. 267—1)

1. A pneumatic actuator comprising a casing, a diaphragm in said casing defining therewith a pressure tight chamber, and a movable member disposed in said casing and having one side provided with a parabolic face adapted to progres-

sively engage the said diaphragm when the member moves theretoward.

2,452,177
MOP HOLDER WITH DUAL TAPE TENSIONING STRUCTURE
Gilbert E. Bodimer, Indianapolis, Ind.
Application October 16, 1944, Serial No. 558,816
3 Claims. (Cl. 15—147)

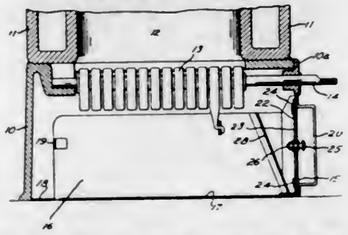


1. In a mop, an elongated base, a handle connected to and projecting beyond one side of said base intermediate the ends thereof, a mop head for engagement with said base on the opposite side thereof and extending to the ends of said base, a flexible loop member secured at its ends to the ends of said mop head, an abutment on said handle spaced from said base, the intermediate portion of said loop member engaged over said abutment, a helical member encircling and loosely fitting over said handle, the coils of said helical member threading upon said abutment, said helical member when rotated in one direction being moved upon said abutment in the direction of said base and drawing the portions of the loop member adjacent to said intermediate portion, toward said handle to tighten said mop head upon the base.

2,452,178
POWER TRANSMISSION SYSTEM
Dalmar T. Brownlee, Indianapolis, Ind., assignor to Chas. Drexler Co., Inc., Indianapolis, Ind., a corporation
Application May 25, 1944, Serial No. 537,209
10 Claims. (Cl. 74—305)

1. A power transmission including in combination a power driven meshing worm and wheel, a

planetary system including a ring gear, a sun gear, a pinion supporting member, and pinion means carried thereby and meshing with the sun gear and ring gear, a clutch connection between the sun gear and worm wheel, and a shaft for

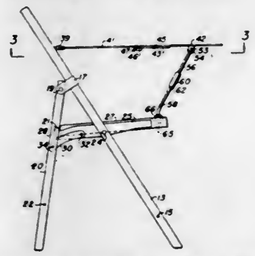


power applying purposes connected to and supporting the member, said shaft projecting through the axially aligned sun gear and worm wheel, said sun gear being slidable axially for clutch connection to and disconnection from the worm gear for the purpose described.

2,452,179
CHEMICAL CONVERSION OF SALT CONTAINING SOLUTIONS
Albert L. Bunting, Dearborn, Mich.
No Drawing. Application July 10, 1945, Serial No. 604,307
6 Claims. (Cl. 210—24)

1. A method of treating natural brines to remove therefrom the soluble halides and sulphates which comprises bringing the said brines into contact with the base exchange zeolitic material in which the exchange metals are silver and barium in such amounts as to supply cations capable of reacting with the halide and sulphate anions in the said natural brines to produce substantially insoluble reaction products therefrom, and thereafter separating the insoluble reaction products from the remaining solution of the starting brine.

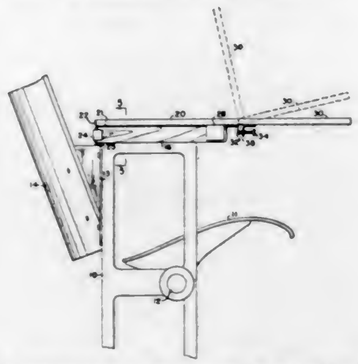
2,452,180
COMBINED ASH RECEPTACLE AND DRAFT CONTROLLING DOOR FOR DOMESTIC WATER HEATERS, STOVES, AND THE LIKE
Daniel G. Burkert, Boyertown, Pa.
Application June 14, 1945, Serial No. 599,409
2 Claims. (Cl. 126—243)



1. An ash pan for use in connection with water heaters, stoves, and the like having an ash pit provided with a front opening, comprising a device having a vertically disposed front plate which normally constitutes a closure for the front opening of the ash pit, a bottom plate and side walls extending from said front plate to form a scoop-like structure open at its inner end, the front plate being provided with apertures, means adapted to open and close said apertures, and a partition in the device adjacent the front plate to provide an unobstructed conduit for air passing through the apertures in the front plate.

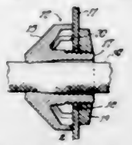
2,452,181
SANITARY NAPKIN HOLDING MEANS
Edith Carpenter, Chicago, Ill.
Application December 19, 1945, Serial No. 635,921
1 Claim. (Cl. 2—315)

In a device of the class described, a napkin-holding means comprising two elastic supporting elements disposed substantially flat against the inner surface of a primary supporting member for body wear and located respectively one at the front and one at the rear of the supporting member, means on the free ends of said element for fastening each element to the supporting member, each element having the upper edge portions thereof converging downwardly from the free ends thereof to form a V, a depending elastic hanger suspended centrally from each of said supporting elements having a V-shaped seam in its upper end, the angles thereof being complementary to the angles of the V of said supporting element whereby said hanger will readily seat in said V of the supporting element and be slidable laterally on the upper edge thereof, and means on the free ends of said hangers to which the ends of a sanitary napkin may be attached.



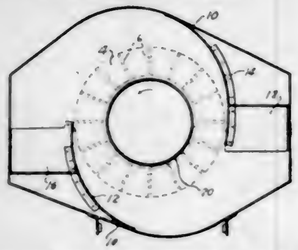
2,452,182
WRITING ARM FOR COLLAPSIBLE CHAIRS
William T. Clawson, Rock Hill, S. C.
Application May 15, 1946, Serial No. 669,955
3 Claims. (Cl. 155—125)

3. A collapsible chair having a main frame and rear legs pivotally secured to the main frame and a seat member pivotally secured to the main frame and pivotally secured to the rear legs, a writing arm, a bayonet slot in the main frame, a member mounted on the rear end of the arm and adapted to be releasably secured in the bayonet slot, a front corner of the seat member having a vertically disposed hole therein, a supporting arm pivotally secured to the front lower surface of the writing arm, and having its lower end shaped to fit into the hole in the seat, the support which is pivotally secured to the lower surface of the front portion of the writing arm comprising upper and lower portions pivotally secured to-



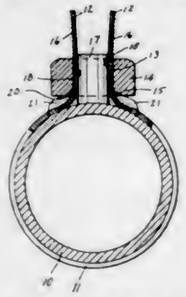
gether and a slidable cuff member disposed on said support for sliding over the pivotal point connecting the upper and lower portions of the support for holding the upper and lower portions of the support in aligned position.

2,452,183
DETACHABLE BOOK SUPPORT FOR CHAIRS
William T. Clawson, Rock Hill, S. C.
Application October 21, 1946, Serial No. 704,771
5 Claims. (Cl. 155—128)



5. A detachable book support adapted to be removably attached to the arm of an opera chair, comprising means on the rear end of the book support for engaging the rear end, the two sides and the bottom surface of the arm, and means on the lower side of the support adapted to clampingly engage opposed sides of the opera chair arm for holding the support on top of the opera chair arm, the forward portion of support arm being separated from the rearward portion and having hinges connecting the two portions of the support together, whereby the forward portion can be pivoted upwardly out of the way of ingress and egress to the opera chairs when desired; the lower surfaces of the two portions of said support having each a bracket secured thereto and a bolt threadably mounted in one of the brackets and engaging the face of the other bracket for adjusting the angularity of the forward portion of the support relative to the rearward portion, which rests on the arm of the opera chair.

2,452,184
CONNECTOR
Dalton E. Cole, Chicago, Ill.
Application October 25, 1945, Serial No. 624,533
7 Claims. (Cl. 285—6.5)



7. A connector adapted to anchor a conductor or cable to an apertured outlet box, comprising two cooperative units, one comprising a tapered recessed body portion having an annular flat shoulder at the base adapted to engage one side of the outlet box, said body portion being formed with a threaded nipple extending axially of the body portion and beyond the base thereof, and adapted to extend through the aperture in the outlet box, said body portion and its nipple having a hole extending therethrough of a diameter to permit insertion of the conductor or cable therethrough, and said tapered body portion having radially extending slots extending from the base to the nipple, with segments of the body portion disposed between the slots capable of flexing on the nipple, and the second unit comprising a nut threaded upon said nipple and adapted to bear against the opposite side of the outlet box, said nut when screwed up tight functioning to contract the smaller ends of the segments upon the conductor or cable.

2,452,185
FLUID PUMP
Tom Elleman, Toledo, Ohio, and Kenneth M. Cloud, Muskegon, Mich., assignors to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application August 12, 1946, Serial No. 689,978
2 Claims. (Cl. 230—47)

1. A centrifugal pump comprising a rotatable shaft, an impeller mounted on the shaft for rotation therewith, a casing for the impeller having walls spaced from the impeller periphery, an auxiliary wall extending from a spaced wall to a point adjacent the impeller periphery and providing an involute air passage encircling half of said impeller, a second auxiliary wall extending from a spaced wall to another point adjacent the impeller periphery and providing a second involute air passage encircling the other half of said impeller, and a deflector associated with each auxiliary wall to cause fluid to flow out of the plane of the impeller, said casing enclosing said impeller, said involute air passages and said deflectors.

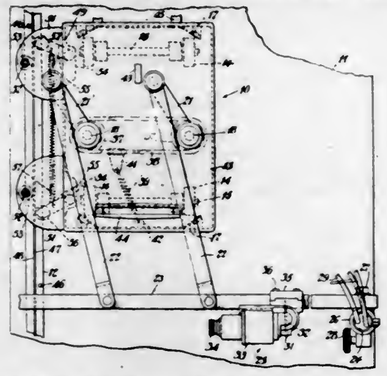
2,452,186
SADDLE CLAMP STRUCTURE
Omar L. Fluharty, Indianapolis, Ind.
Application January 17, 1947, Serial No. 722,727
11 Claims. (Cl. 24—19)

1. A clamp structure for a member to be clamped comprising in combination a strap adapted to substantially envelop the member and having free ends disposed in spaced relation substantially parallel to a perpendicular to the longitudinal central axis of the member, a saddle and post means having a post portion disposable between said ends and upon which the same may slide and elongated spaced portions adapted for member engagement and between which the strap is disposed, the opposite faces of the ends having threads thereon, and a nut threaded upon those ends, the post being of lesser cross-sectional area than the nut threaded bore.

2,452,187
SYNTHESIS OF NITRILES
William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application February 21, 1946, Serial No. 649,381. Divided and this application February 24, 1948, Serial No. 10,572
4 Claims. (Cl. 260—465.1)

1. A process for preparing nitriles of the formula $R(CN)n$, R being a hydrocarbon radical having from 1 to 8 carbon atoms, n being an integer from 1 to 2 inclusive, which comprises reacting ammonia with an aldehyde of the formula $R(CHO)n$ in the presence of a metallic cobalt catalyst at a temperature of about 275° to 500° C. and thereafter separating from the resultant reaction product the nitrile of the formula $R(CN)n$ produced by the said reaction.

2,452,188
METHYLENEDIOXYPHENYL COMPOUND AS INSECTICIDE AND PYRETHRIN SYNERGIST
Oscar F. Hedenburg, Pittsburgh, Pa., assignor, by mesne assignments, to Harold W. Moburg, Toledo, Ohio
No Drawing. Application February 27, 1943, Serial No. 477,444
6 Claims. (Cl. 167—33)

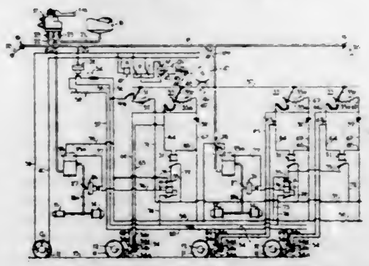


1. An insecticide and synergist for a pyrethrin insecticide having the general formula

in which R is the 3,4-methylenedioxyphenyl radical and R_2 is a substituent selected from the group consisting of the hydrogen atom and alkyl, aryl, aralkyl, alicyclic and heterocyclic radicals.

2,452,189
UNIVERSAL TORCH MACHINE
Richard F. Helmkamp, Jersey City, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application October 9, 1944, Serial No. 557,770
3 Claims. (Cl. 266—23)

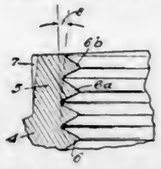
1. A universal torch machine comprising a carriage having wheels adapted to run directly on a work-piece surface, a torch mounted on the carriage for lateral movement with respect thereto, a guiding strip adapted to be fastened to the work-piece and having two vertically disposed faces, a pair of rolls one of which is mounted near the front of the carriage and the other of which is mounted near the rear thereof, said rolls being arranged to engage one of the vertical faces of the guiding strip, a second roll cooperating with each of said first-named rolls and engaging the other vertical face of the strip, roll support arms for respectively carrying said last-named rolls and pivotally connected to the torch carriage for movement in a horizontal plane, and means directly connecting said roll support arms for maintaining



the rolls in substantially equalized, clutched relation with the guiding strip faces.

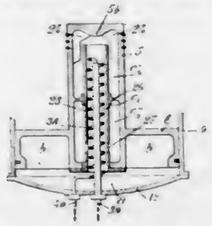
2,452,190
POLYMERIZATION OF OLEFINS
Stanford J. Hetzel, Cheltenham, and Robert M. Kennedy, Drexel Hill, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application October 30, 1945, Serial No. 625,693
8 Claims. (Cl. 260—683.15)

1. A process for the polymerization of ethylene which comprises contacting ethylene under polymerizing conditions with a catalyst consisting essentially of silica gel, alumina and a metal selected from the group consisting of nickel and cobalt.



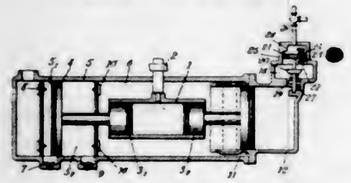
2,452,191
SPEED DIFFERENTIAL DETECTING APPARATUS
Claude M. Hines, Verona, and Carlton D. Stewart, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application February 9, 1944, Serial No. 521,640. Divided and this application January 26, 1945, Serial No. 574,774
6 Claims. (Cl. 175—355)

1. Apparatus for detecting a differential in the rotational speed of two separate rotary elements comprising, in combination, a relay, means responsive to the rotational speed of one of said rotary elements for periodically energizing the relay at a corresponding frequency, means responsive to the speed of rotation of the other of said elements for correspondingly varying the drop-



out time of the relay, the aforesaid means cooperating in such a manner that said relay is maintained picked-up so long as the rotational speed of said one rotary element does not reduce more than a certain amount below the rotational speed of the said other rotary element, and means controlled by said relay.

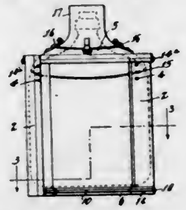
2,452,192
LOCK NUT
Richard T. Hosking, Chicago, Ill.
Application May 10, 1944, Serial No. 534,884
2 Claims. (Cl. 151—21)



1. In combination with a threaded bolt, a nut threaded thereon, having a relatively thin-walled extension extending from the body thereof parallel with the axis of and interiorly threaded to engage the bolt, a plurality of angularly spaced indentations in the outer wall of the extension, increasing in depth axially from their initial point adjacent the body of the nut toward their greatest depth at the outer end of the extension, the threads on the interior of the extension being inwardly displaced in radial alignment with each indentation, a distance substantially equal to the radial depth of the corresponding part of the indentation.

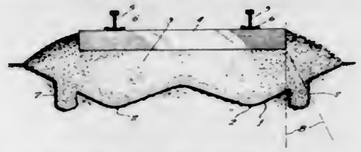
2,452,193
FREE PISTON ENGINE COMPRESSED AIR ACCUMULATOR, VARIABLE VOLUME
Robert Huber, Paris, France, assignor to Raul Pateras Pescara, Lisboa, Portugal
Application November 2, 1945, Serial No. 626,249
In France November 18, 1944
13 Claims. (Cl. 123—46)

7. A free piston machine which comprises, in combination, a motor cylinder, a motor piston freely movable in said cylinder including a crown and a cylindrical hollow portion extending outwardly from said crown, a hollow piston carried by said cylindrical portion around the outer end thereof, means on the outer side of said last mentioned piston forming therewith a variable volume chamber in communication with the inside of said second mentioned piston, means for accumulating, during every outward stroke of said pistons, energy for producing the next inward stroke thereof, said last mentioned means including a gas cushion at least partly contained in the hollow portions of said pistons and said variable volume chamber, a tube having its outer wall at a distance from the inner wall of said cylindrical portion of the motor piston, carried by said last mentioned piston and extending inwardly to a short distance of said crown, said tube opening at its outer end into said variable volume chamber and at its inner end into the space inside said motor piston close to said transverse wall thereof, and a transverse annular partition between the outer wall of said tube and the inner wall of said cylindrical hollow portion of the motor piston, at an intermediate point of said tube, thus dividing the annular space between said tube and said portion of the motor piston into two compartments, the outer one of which is in communication with said variable volume chamber.



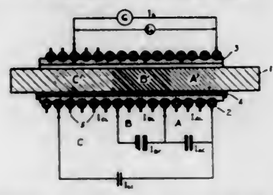
2,452,194
FREE PISTON MACHINE
Robert Huber, Paris, France, assignor to Raul Pateras Pescara, Lisboa, Portugal
Application December 21, 1945, Serial No. 636,444
In France December 26, 1944
4 Claims. (Cl. 230—56)

3. A free piston machine which comprises, in combination, a motor cylinder, at least one motor piston movable in said cylinder, at least one return energy pneumatic accumulator including a cylinder and a piston operatively connected with said motor piston so as to form with said last mentioned cylinder a chamber of variable volume acting as an air cushion, means for supplying said chamber, for the starting of the machine, with a mass of compressed gas greater than that present therein for normal working conditions, means forming a discharge space in communication with the end of said accumulator cylinder, and on the opposite side of said accumulator piston from said chamber, channel means formed in the wall of said accumulator cylinder and adapted to cooperate with said accumulator piston for connecting said chamber with said space, said space being for the connection period at a lower pressure than the pressure in said accumulator chamber for the same period during the starting of the engine, whereby said channel means gradually reduce the mass of gas in said accumulator to its normal working value after some starting oscillations of the motor piston, and means controlling the flow through said channel means whereby said flow in one direction is greater than the flow in the opposite direction.



2,452,195
CRATE FOR WATER BOTTLES OR ACID CARBOYS
Carl Eugene Johnson, Alhambra, Calif.
Application October 11, 1944, Serial No. 558,130
4 Claims. (Cl. 215—12)

4. A crate for a bottle comprising a metal frame including a base member, four corner posts united to said base member, said corner posts having bases and side portions arranged to form a channel-shaped section, with the bases of the posts turned inwardly of the frame to provide contact-supporting members for the water bottle to be received by said frame, upper horizontal members interconnecting said posts, and a retaining ring having a plurality of extensions, and a plurality of apertures in said corner posts for

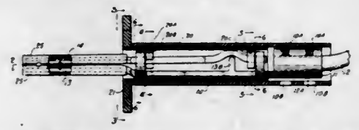


providing detachable connections for said extensions of said retaining ring.

2,452,196
METHOD OF STABILIZING ROADBEDS
William J. Kelley, Chicago, Ill.
Application November 8, 1945, Serial No. 627,323
2 Claims. (Cl. 238—2)

1. The method of stabilizing a railway road bed, while under traffic conditions, having ties resting on ballast in a basin-like subgrade, comprising: displacing some of the ballast and digging a deep, substantially continuous, channel-like trench through the upwardly and outwardly inclined face of the subgrade beyond the ends of the ties but within the bearing area of said ties, said trench having a cross sectional area at least as large as that of one of said ties; filling the trench with ballast; and adding new ballast to compensate for the ballast falling into the trench.

2,452,197
INDUCTION FURNACE FOR VARIABLE HEAT PATTERNS
Theodore R. Kennedy, Lower Makefield Township, Bucks County, Pa., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a corporation of New Jersey
Application March 22, 1945, Serial No. 584,201
2 Claims. (Cl. 219—13)

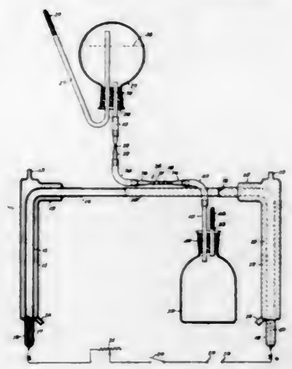


1. An induction furnace comprising a continuous unidirectional helical inductor winding adapted to surround a charge to be heated, said winding having taps arranged throughout its length, a main capacitor connected across substantially all of the charge enclosing portion of the winding, a source of alternating current energy connected across substantially the same turns of said winding as are connected by said main capacitor, and an auxiliary capacitor connected to certain of said taps across intermediate turns of said winding, the auxiliary capacitor being of a value which is proportional to the heating effect desired in the portion of the winding which it shunts, and the collective effect of all the capacitors being such as to produce substantial resonance with the shunted turns of the winding.

2,452,198
POLYMERIZATION OF OLEFINS
Robert M. Kennedy, Drexel Hill, and Stanford J. Hetzel, Cheltenham, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
No Drawing. Application October 30, 1945, Serial No. 625,694
6 Claims. (Cl. 260—683.15)

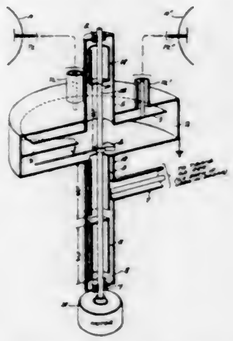
1. A process for the polymerization of olefins containing three or more carbon atoms per molecule which comprises contacting the olefins under polymerizing conditions with a catalyst consisting by weight of 80%–99.98% silica gel, 0.01%–10% alumina and 0.01%–10% of a metal selected from the group consisting of nickel and cobalt.

2,452,199
WELDING ELECTRODE HOLDER
John L. King, Detroit, Mich., assignor to Miracle Lubricating Company, Detroit, Mich., a corporation of Michigan
Application April 18, 1946, Serial No. 663,129
7 Claims. (Cl. 219—8)



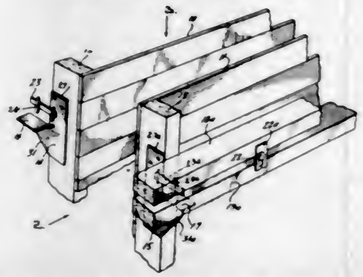
2. In a welding electrode holder, a pair of members provided at their forward ends with electrode holding jaws, a handle into which the rearward portions of said members extend, a fulcrum between said members adjacent their rearward ends, a cam located adjacent said fulcrum for acting on said members to swing open said jaws and a second cam located at a distance from said fulcrum and adapted to act on said members to swing closed said jaws.

2,452,200
TREATMENT OF POROUS MATERIAL
Hamline M. Kvalnes and Franklin S. Chance, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 16, 1945, Serial No. 588,720
5 Claims. (Cl. 117—148)



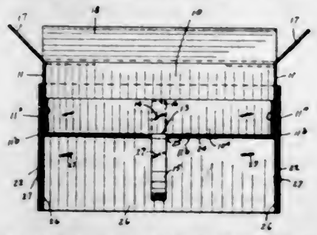
1. The method of loading the voids of uncomminuted porous materials with urea-formaldehyde reaction products which comprises soaking such porous material in an aqueous reagent containing as an essential ingredient a non-resinous urea-formaldehyde reaction product having from 2.5 to 4.0 mols of formaldehyde per mol of urea, said product being characterized in that it gives N,N'-dimethyloluron dimethyl ether upon etherification with methanol, said product being characterized further in that it has been prepared by mixing urea with 4 to 5 moles of aqueous formaldehyde per mole of urea, adjusting the pH of the mixture with alkali to from 7 to 10.5, heating the resulting mixture at a temperature of 100° to 200° F., and distilling water and excess formaldehyde from the resulting product under subatmospheric pressure.

2,452,201
STERILIZING LIQUIDS
Sidney Older Levinson and Franz Oppenheimer, Chicago, Ill., assignors to Michael Reese Research Foundation, Chicago, Ill., a corporation of Illinois
Application December 31, 1946, Serial No. 719,388
7 Claims. (Cl. 250—43)



1. The process of sterilizing a solution of suspension without impairing potency or altering chemical or biologic activity which comprises subjecting it in a flowing film not over 3 mm. thick for a period of not more than 10 seconds to irradiation in which the energy between 2600 Å. and 2000 Å. is not less than 10 milliwatts per square centimeter and the energy below 2000 Å. is not less than 0.1 milliwatt per square centimeter.

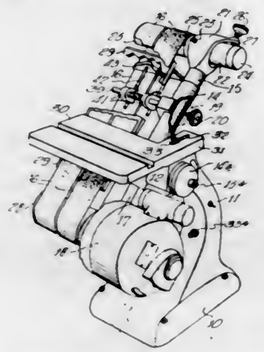
2,452,202
RADIO-FREQUENCY DISTRIBUTOR APPARATUS
Nils E. Lindenblad, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application August 3, 1944, Serial No. 547,909
18 Claims. (Cl. 343—110)



1. A radio frequency distributor comprising a resonant disc or plate, means for exciting said disc in a plurality of directions in its own plane, and a pair of channels connected to said disc at different spaced points, each of said points being a neutral point for the resonance effects caused by excitation at the other point.

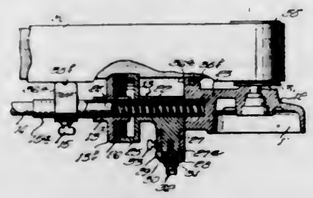
2,452,203
CONCRETE FORM WALER BRACKET
Vincent J. Luppino, Hartford, Conn.
Application December 13, 1945, Serial No. 634,656
3 Claims. (Cl. 25—131)

1. In a bracket for separating a pair of horizontal vertically spaced upper and lower waler studs of a concrete form, a vertical plate, means to secure said plate to a vertical stud attached to a wooden concrete retaining wall, a horizontal shelf integral with said plate, and a spreader arm mounted on said plate on a horizontal pivot pin located above the top of said lower waler stud, for supporting said upper waler stud in spaced relation from said lower waler stud.



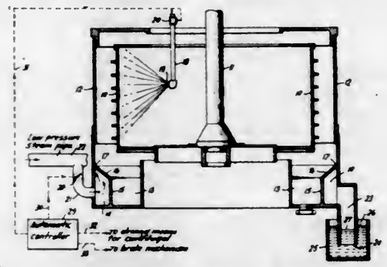
2,452,204
METHOD AND PACKING STRUCTURE FOR HIGH PACKING HANDLED BASKETS WITH FRUIT
James A. McCormick, Kalamazoo, Mich., assignor to Fruit and Produce Packing, Incorporated, Indianapolis, Ind., a corporation
Application January 22, 1944, Serial No. 519,316
6 Claims. (Cl. 226—17)

1. The method of packing fruits, vegetables, and the like in a handled container having bottom forming portions, consisting in inverting the container and nesting it in a receiving and supporting form of a depth at least as great as the height of the container handle, and apertured for handle reception, the container having its bottom opened when nested in said form and its handle extending through the aperture therein, packing said container through the open bottom thereof and while in inverted position, closing the portions and securing them in closed bottom position over the pack, inverting the form and packed container nested therein, and then removing the form from the packed container.



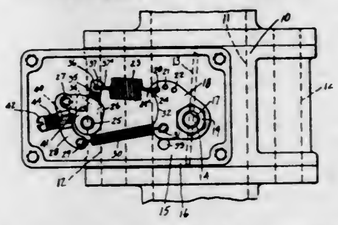
2,452,205
SANDING MACHINE
Herman S. Newton, Temple, Tex.
Application November 29, 1945, Serial No. 631,551
3 Claims. (Cl. 51—135)

1. A sanding machine including a base and stand, a spindle column consisting of telescopically related tubular members, the outer of said members being mounted intermediate its ends on said stand for oscillative movement through an arc of 90°; a motor and spindle mounted on one end of said column, a parallel companion spindle carried by the end of the inner tubular member of said column and capable of rotative and limited pivoted displacement thereon, sanding belts surrounding said spindles, driven by said motor, an arm having one end mounted rotatably on the outer of said telescopically related members and



extending laterally therefrom between the leads of said sanding belts and having relatively spaced collars thereon, a pair of parallel shanks intermediate the leads of said belts, and adjustably retained by said collars, an arcuate shoe carried by each of said shanks, a torsion spring surrounding said arm and having its ends bearing on said shanks, for imposing individual tension on said belts by means of said shoes and means for rotating said arm to vary the tension imposed by said spring.

2,452,206
SANDING MACHINE
Herman S. Newton, Temple, Tex.
Application July 2, 1946, Serial No. 681,054
5 Claims. (Cl. 51—135)

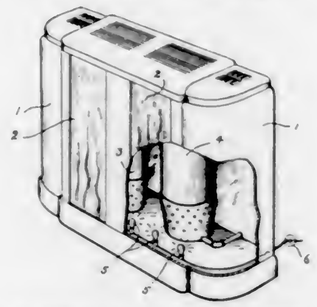


3. A polishing, abrading and sanding machine comprising an elongated body consisting of two telescopically related tubular members normally extended under spring compression, one of said members carrying a motor and having a lateral mounting member thereon on which said body is arranged to oscillate, a pulley on the shaft of said motor, a second pulley carried by the companion member whose shaft is parallel with that of said first pulley, an abrasive sheet surrounding said pulleys, a torsion spring surrounding said body to resist rotation thereof about its longitudinal axis, a second torsion spring embracing the lateral mounting member of said first tubular member for resisting oscillative displacement of said body transverse to its longitudinal axis.

2,452,207
FLUID PRESSURE OPERATED CURB SIRUP SEPARATOR
Charles A. Olcott, West Milford, N. J.
Application February 1, 1944, Serial No. 520,604
13 Claims. (Cl. 210—75)

1. The method of directing two liquids which successively flow through the same space in different time intervals into different ones of two containers, said containers being provided with directing means, which directing means and containers are so located with respect to each other and to said space that any liquid in said space normally flows therefrom into the first container only, which comprises applying a fluid pressure in the first container, during the time interval that the first of said liquids is flowing through said space, which is sufficiently high to deny said first liquid access to said first container and to act in cooperation with said directing means to cause said first fluid to flow into the second container, and thereafter reducing the fluid pressure, during the time interval that the second of said liquids is flowing through said space, to a value which is sufficiently low so that liquid access to said first container is no longer denied, whereby said second liquid flows into said first container.

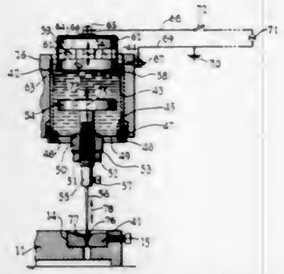
2,452,208
VELOCITY GOVERNOR
Raymond Reger, Anderson, Ind., assignor to Pierce Governor Company, Anderson, Ind.
Application October 21, 1943, Serial No. 507,086
10 Claims. (Cl. 267—1)



1. A spring resistance device comprising an arm responding to a variable force to be resisted, a second arm pivotally supported adjacent the first mentioned arm, an extensible spring connecting the arms together, and means, normally inextensible over the greater portion of the first mentioned arm movement in one direction, operatively connecting the arms together for simultaneous oppositely directed rotation of said arms, the second mentioned arm being of two-part character, said parts having pivotal connection therebetween and being normally collapsed together at all times, the last mentioned means being connected to one part and the extensible spring to the other part.

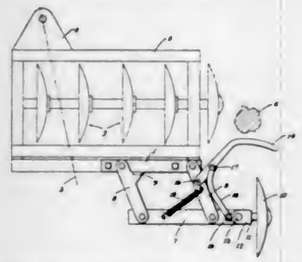
2,452,209
CELLULOSE ETHER PLASTICIZED WITH BIS(ALLYL LACTATE) MALEATE
Chessie E. Rehberg, Glenside, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 12, 1944, Serial No. 549,244
2 Claims. (Cl. 106—182)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A plastic composition comprising a cellulose ether and a plasticizer therefor, said plasticizer consisting of bis(allyl lactate)-maleate.



2,452,210
COMBINED ILLUMINATING AND RADIATING TYPE HEATER
Jesse J. Rogers, Duluth, Minn.
Application April 18, 1946, Serial No. 663,154
3 Claims. (Cl. 126—97)

3. In a heater of the type described, a casing including imperforate, flat, opaque, vertical front and rear and end walls, a floor, and a top having heat escape openings, the front of the casing including a vertically disposed, flat, transparent, vari-colored panel extending from top to bottom of the casing and in the same vertical plane of the front opaque wall, a vertically disposed heating means rising directly from the floor toward the top of the casing and positioned in spaced vertical parallelism with said panel for heating purposes and to illuminate the interior of the casing, and a radiance producing element installed in the casing and supported from the floor of the casing between said heating means and said panel and disposed close to the latter to illuminate the interior of the casing and to transmit light rays laterally directly to and through said transparent panel to thereby augment the heating capacity of the heater or to selectively light and heat the interior of the casing by said heating means and illuminate said vari-colored panel or illuminate the interior of the casing to illuminate said panel by the radiance producing element.

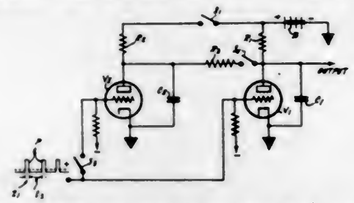


2,452,211
MACHINE FOR MECHANICALLY WORKING MATERIALS
Adolph H. Rosenthal, New York, N. Y., assignor to Scophony Corporation of America, New York, N. Y., a corporation of Delaware
Application October 17, 1944, Serial No. 559,079
3 Claims. (Cl. 51—59)

1. In a machine for operating a tool, an enclosure, a body of liquid within said enclosure, a member immersed in said liquid, a tool holder outside said enclosure and connected through a wall thereof with said immersed member, and

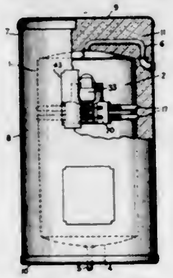
means for directing supersonic vibratory energy through said liquid to said member.

2,452,212
VINEYARD PLOW
William L. Shimmon, Modesto, Calif.
Application January 11, 1946, Serial No. 640,531
2 Claims. (Cl. 97—137)



1. A vineyard plow comprising front and rear frame members in spaced parallel relation, the front frame member being adapted to be supported above ground for movement along a vineyard row, longitudinally extending parallel links pivotally connecting the frame members, the rear frame member projecting at one end laterally outward beyond the corresponding end of the front frame member, a plow blade disposed outward of said projecting end of the rear frame member, a plow blade supporting element pivoted intermediate its ends on said projecting end of the rear frame beam for horizontal swinging motion, a trunk engaging arm pivoted at its inner end to the outermost link and projecting laterally outward ahead of the plow blade, and a thrust link pivotally connected between said arm intermediate its ends and said plow blade supporting element inwardly of the pivot of the latter.

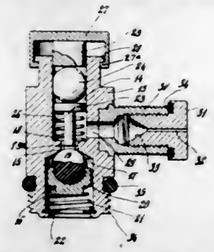
2,452,213
WAVE GENERATING SYSTEM
Carl G. Sontheimer, Riverside, Conn., assignor to Radio Corporation of America, a corporation of Delaware
Application May 30, 1945, Serial No. 596,685
5 Claims. (Cl. 320—1)



1. A wave-generating system comprising a first condenser, means for periodically charging and discharging said first condenser, a second condenser, means for periodically charging and discharging said second condenser respectively concurrently with the operation of the first-mentioned charging and discharging means, and

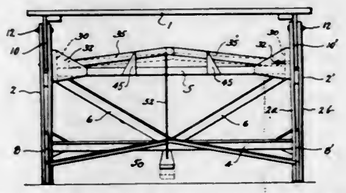
means for applying the charge on said second condenser to said first condenser to thereby lengthen that portion of each charging period

during which the charge on said first condenser increases substantially linearly with time as a result of the operation of said first-mentioned charging means alone.



2,452,214
CLAMP-ON ELECTRIC HEATER FOR WATER TANKS AND THE LIKE
Oliver G. Vogel and Francis E. Kirk, Oak Park, Ill., assignors to Hotpoint Inc., a corporation of New York
Application November 19, 1945, Serial No. 629,450
11 Claims. (Cl. 219—38)

1. In a water heater having a water heating tank, electrical heating means for said tank comprising a rod-like flexible heating element for encircling said tank with its two ends spaced apart but adjacent eath other, said element having a resistance conductor housed within a metallic sheath and an electrically insulating material insulating said conductor from said sheath, a flexible clamping band encircling said heating element with its ends spaced apart but adjacent each other, and adjustable resilient means interconnecting the ends of said band so as to draw them together and thereby force said heating element into good thermal relation with said tank and to permit relative expansion and contraction of said tank, heating element and band, said heating element being slidable with relation to said tank and band when said resilient means is adjusted to release the tension in said band so that the heating element can readily be withdrawn from and inserted into its working position with relation to said tank.

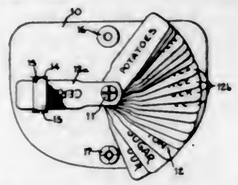


2,452,215
VALVE FOR INSECTICIDE SPRAYS
Selden T. Williams, Bellerose, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application August 5, 1944, Serial No. 548,293
5 Claims. (Cl. 251—137)

5. A valve device of the character set forth comprising a casing having a passage therethrough, a valve seat in said passage, a check valve engaging said seat, a deflator means in the passage on the side of the valve seat opposite that to which the check valve seats, manually operable means adapted for limited movement at the outer end of the casing, a deformable elastic stuffing member in the casing between the said manually

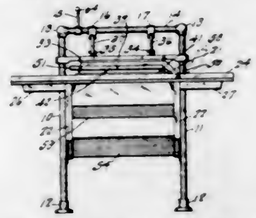
operable means and the deflating means, a spring normally holding said deflator means out of check valve unseating position and the stuffing member under deformation to provide a packed closure for the passage in the casing, and the casing having an opening through its wall in open communication with the portion of the passage therein between the stuffing member and the valve seat.

2,452,216
DRAFTING TABLE
Gordon W. Yarber, Seattle, Wash.
Application February 25, 1946, Serial No. 649,958
4 Claims. (Cl. 311—38)



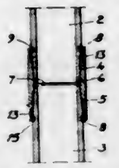
1. A table of the character described comprising a supporting frame structure including spaced standards, a table top having supporting ribs fixed thereto at opposite ends and pivotally mounted by said standards for tilting adjustment of the said top, clamp bolts movably mounted in the standards at opposite ends of the frame structure to engage with said supporting ribs of the table top, springs acting on the bolts to normally retain them in clamping contact with the ribs to retain an adjustment of the table top, and a toggle linkage extended between the bolts and operable to simultaneously move them against the spring pressure to release their clamping action for adjustment of the top.

2,452,217
TAB REMINDER DEVICE
La Bron R. Allen, Juanita H. Allen, and Ruth L. Kabitsch, Cincinnati, Ohio, assignors to Signet, Ltd., Cincinnati, Ohio
Application September 16, 1947, Serial No. 774,392
7 Claims. (Cl. 116—134)



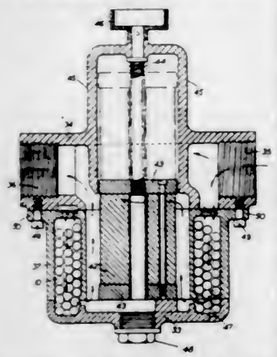
1. In a tab reminder device, a flexible closure member, a series of indicator tabs, means for pivotally mounting said tabs by one end at a central point in said closure cover, a combined locking and carrying ring mounted on said closure cover to one side of said pivotal mounting

adapted to receive and secure a series of selected tab indicators to said cover, and fastening means



on said closure member adapted to hold said closure in wrapped position around said indicator tabs, pivot, and strap.

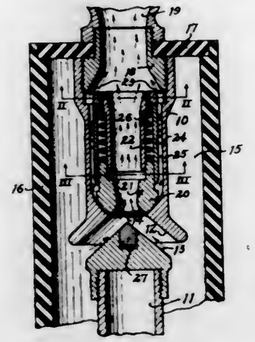
2,452,218
HAMBURGER APPORTIONING, FORMING, AND WRAPPING MACHINE
Ken E. Bemis, Oakland, Calif.
Application July 15, 1946, Serial No. 683,588
13 Claims. (Cl. 17—32)



1. A patty forming and wrapping machine, in combination, apportioning means, head and base dies and urging means for urging the head die relative to the base die for compressing portions therebetween, said base die being slidably supported, and guiding means for said base die and including stop means for limiting sliding movement thereof for registry respectively with said head die and with said apportioning means, said apportioning means being movable into and out of cooperation with said base die when said base die is moved into position for registry therewith, and a receptacle removably supported in receiving position with each of the respective ends of the apportioning die to hold material to be formed into patties and receive material in excess of that required to form a set of portions.

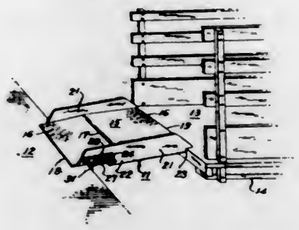
2,452,219
DEVICE FOR THE JOINING OF TUBES
Knut Lennart Bergvall and Ernst Erik Dahlberg, Stockholm, Sweden
Application November 15, 1945, Serial No. 628,862
In Sweden August 10, 1945
5 Claims. (Cl. 285—193)

1. In a device for coupling rods, pipes and like members in end-to-end relation, a coupling sleeve having divergent internal tapered surfaces for sliding engagement with corresponding external tapered surfaces provided at the ends of said members to be coupled, each end of said sleeve containing a plurality of axially extending slits to form resilient tongues, hook members formed at the outer ends of the tongues, and retaining means provided on the external surface of said coupled members for engagement with said hook members to thereby lock the coupled members together.



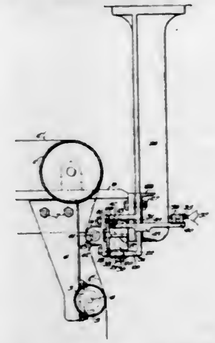
2,452,220
MAGNETIC SEPARATOR
William Leslie Bower, Sheffield, England
Application May 17, 1943, Serial No. 487,370
In Great Britain May 19, 1942
3 Claims. (Cl. 210—1.5)

2. A magnetic separator for liquids, comprising a casing built up of a pair of end caps and an intermediate hollow cylindrical wall of non-magnetic material, balls of magnetic material in said hollow wall forming a regular and uniformly arranged system of interstices between each other through which the liquid may flow around the balls, said casing having liquid inlet and outlet openings communicating respectively with openings leading to the opposite ends of the cavity of said cylindrical wall, and a magnet disposed coaxially within said casing for producing a magnetic flux in the balls.



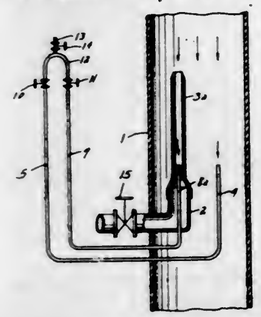
2,452,221
FLUID BLAST ARC EXTINGUISHING CIRCUIT BREAKER
Arnold E. Brock, Burlingame, Calif., assignor to Pacific Electric Manufacturing Corporation, San Francisco, Calif., a corporation of California
Application August 27, 1945, Serial No. 612,777
7 Claims. (Cl. 200—148)

1. In a fluid blast arc extinguishing circuit breaker, the combination of a contact enclosing chamber adapted to maintain a fluid under pressure having an exhaust outlet at one end, a stationary contact of cylindrical configuration extending into said chamber and forming a continuation of said exhaust outlet through which a fluid under pressure within said chamber may flow to said exhaust outlet, said cylindrical contact having its inner end formed to provide an open annular contact surface, a cooperating axially movable contact having a cooperating contact surface adapted to engage the annular contact surface of said cylindrical contact and close the opening therethrough, an annular valve-like member disposed within and in back of the annular contact surface of said cylindrical contact having a restricted centrally disposed opening through which a blast of arc extinguishing fluid may flow when said contacts are moved out of engagement with each other, a cylindrical sleeve for supporting said movable valve-like member centrally in spaced relation with the inner walls of the cylindrical contact and forming an outer annular passageway leading to the exhaust outlet of said contact enclosing chamber,



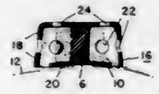
and means for yieldingly maintaining said movable valve-like member in position where a blast of arc extinguishing fluid will be normally directed through its central opening and permitting movement thereof in the event of a predetermined arc generated gas pressure to allow the generated gases to flow around the outside thereof and through said annular passageway to the exhaust outlet of said chamber.

2,452,222
BRIDGE RAMP
Newall M. Bryson, San Francisco, Calif., assignor to Pallet Engineering Company, San Francisco, Calif., a firm
Application December 21, 1946, Serial No. 717,662
2 Claims. (Cl. 14—72)



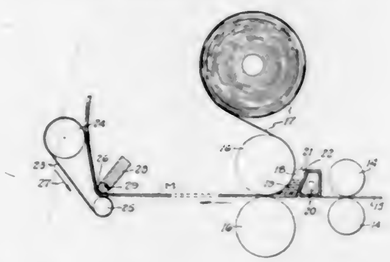
1. A dock board of the type adapted to bridge a gap between the opposed edges of two adjacent surfaces, said dock board comprising a platform having side plates, portions of which extend below the level of the platform and provide a surface-edge-engaging shoulder at one end thereof; a longitudinal flange extending from one edge of said plates and adjacent the opposite end thereof and having a plurality of notches therealong; a guide member parallel and coextensive with said flange; and a surface-edge-engaging arm slidably and rotatably supported by said guide member, said arm being of a length to extend below said plate when engaging a selected notch in said flange.

2,452,223
STOPPING MECHANISM FOR TEXTILE APPARATUS
George H. Cady, Providence, and Edward W. Adams, Cranston, R. I., assignors to Cranston Print Works Company, Cranston, R. I., a corporation of Rhode Island
Application August 22, 1945, Serial No. 611,966
4 Claims. (Cl. 192—127)



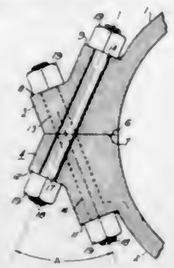
1. In a stopping mechanism for textile machines, a pair of guide rolls for feeding a strip of fabric, a detector roll intermediate the guide rolls in laterally offset relation to the peripheries thereof for forming a bend in the feeding fabric, means for pivoting said detector roll to adapt it to rock on an axis normal to the axis of said roll, an electrical circuit, a switch in said circuit, and means operative by the rocking of the detector roll to actuate the switch to control the electrical circuit.

2,452,224
GAS SAMPLING APPARATUS
James D. Collett, Jr., Houston, Tex.
Application May 7, 1945, Serial No. 592,476
4 Claims. (Cl. 73—421.5)



1. In an apparatus for taking samples of a fluid flowing through a conduit, a sampling nozzle disposed in said conduit and provided with an intake orifice facing upstream and positioned a predetermined distance from the center of said conduit, a Pitot tube having its impact receiving end facing upstream ar positioned from the center of said conduit a distance equal to that at which the nozzle orifice is spaced, and a second Pitot tube having its impact receiving end disposed in said nozzle and facing upstream, said Pitot tubes having measuring columns disposed in juxtaposed parallel relation and having their impact faces disposed at the same horizontal level.

2,452,225
HAIR CURLING DEVICE
Philip T. Coloccia, Hillside, N. J.
Application March 7, 1947, Serial No. 733,100
5 Claims. (Cl. 132—40)



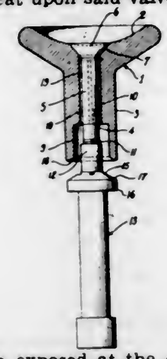
4. A unitary hair curling device of molded rubber which comprises a thin flexible disk portion adapted to be positioned in contact with the scalp, a stem member united to the disk portion and extending upwardly therefrom a sufficient distance to permit curling long strands of hair thereon, a bowl portion connected to said stem member and extending downwardly therefrom in its normal position, the bowl portion having sides of a length such that when folded over a curl in its normal position, the sides will extend to the said base portion and remain over the curl without substantial tension in its normal folded position, the said bowl portion being adapted to be inverted in position so as to extend upwardly from the stem member to permit winding or curling of hair on the said stem member in a plane parallel to the scalp, and openings in the body of the bowl portion to permit ventilation of air and evaporation of moisture from the hair during use of the device.

2,452,226
LAMINATED PRODUCT AND METHOD OF MANUFACTURE
Charles N. Cone, Portland, Oreg., assignor to M and M Wood Working Company, Portland, Oreg., a corporation of Oregon
Application June 15, 1944, Serial No. 540,388
13 Claims. (Cl. 154—132)

6. The method of making a laminated material comprising uniting in interfacial relation a ply of wet wood veneer, a ply of asphalt and a ply of a fibrous cellulosic material felted together into a sheet of paper, said asphalt ply being capable of bonding itself to said plies of wood veneer and paper for holding the several plies of said material together in interfacial relation and providing a plastic base for the veneer ply, rupturing said ply of wood veneer for providing a pattern of closely spaced fissures following the grain of the wood and extending through the thickness of the veneer and constituting a multitude of expansion joints providing for contraction and expansion of the veneer ply due to subsequent changes in its moisture content, and subsequently drying said material.

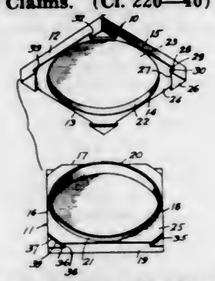
2,452,227
FLANGED JOINT
Hans P. Dahlstrand, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 8, 1946, Serial No. 652,882
7 Claims. (Cl. 189—36)

1. In a casing section having a flange portion adapted to abut and be detachably secured to a like portion of another section by inserting securing elements through alined apertures provided in the flange portions thereof, a flange portion on said section having a joint forming surface and a pair of oppositely sloping surfaces spaced from each other and from said joint forming surface, said flange having a plurality of apertures extending therethrough from said joint forming pair of oppositely sloping surfaces in oppositely inclined, nonintersecting relation with respect to each other, at least the portions of said oppositely sloping surfaces adjacent said apertures presenting generally plane surfaces respectively surface alternately to one and the other of said for engagement by securing element-portions.



2,452,228
ELASTIC PARACHUTE SHROUD AND METHOD OF MAKING IT
Robert T. Dawes and Frank Taylor, Hudson, Mass.
Application March 25, 1947, Serial No. 737,077
29 Claims. (Cl. 87—2)

1. A parachute shroud comprising a braided jacket and a rubber-elastic core, the core comprising a bundle of substantially parallel elastic threads firmly bound together at opposite ends of the core, the jacket extending beyond opposite ends of the core to form attaching terminals, and a terminal cord firmly anchored to each end respectively of the core, each terminal cord being encased within the corresponding terminal portion of the jacket, the elastic threads being normally held stretched, intermediate said end bindings, by the grip of the jacket when the shroud is unloaded, the normal elongation of the core threads being less than their elongation when the shroud is supporting the riding load.



2,452,229
PESSARY AND MANIPULATING HANDLE ASSEMBLY
Glenn L. De Bray and Atwill Morgan, Los Angeles, Calif.
Application March 18, 1946, Serial No. 655,109
5 Claims. (Cl. 128—127)

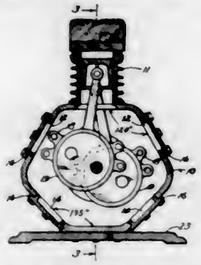
1. A pessary, comprising a unit including a body member having a concave tissue engaging depression in one of its surfaces, a valve bore extending through said body and communicating with said concave surface and having a valve seat formed therein adjacent said surface, a valve member having a stem extending through said bore and adapted to seat upon said valve seat, the surface

of said valve exposed at the concave surface of said body being concaved to conform with and continue the cavity of the body surface, said valve having a stem extending into and guided by said bore and one or more longitudinal grooves extending along said bore to define passage for fluid about the stem of said valve.

2,452,230
ROTARY LOCK BOX
Philip A. Derham, Rosemont, Pa., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application July 26, 1945, Serial No. 607,238
10 Claims. (Cl. 220—40)

1. In a rotary lock box, a square cover part, a square container part, said parts having contacting flat surfaces and cooperating cylindrical laterally extending guiding surfaces, the guiding surfaces having a common axis perpendicular to the flat surfaces, and means for separably locking the parts together in position to form a square box, said means comprising identical laterally extending and arcuately grooved projections at the corners of the cover part, a tongue on each projection below the groove of such projection, concentric arcuate surfaces on the inner end of the tongue and on the outer wall of the groove respectively, said surfaces being slightly eccentric to the cylindrical surfaces, the container part being provided with identical recesses at the corners thereof to receive the respective projections, there being a tongue and a groove at each of said corners of the container part, the tongue being adapted to enter the groove of a projection and the groove being adapted to receive the tongue of a projection, the tongue having an arcuate outer surface and the groove having an arcuate inner surface, said surfaces being eccentric to said axis whereby when the flat surface of the cover part is set on the flat surface of the container part with the projections between adjacent recesses and outside of the container part and the cylindrical guiding surfaces are in contact, and the parts are then relatively rotated to a position in which the parts are in registration, the eccentric surfaces of the tongues and the walls of the grooves are in pressed contact to lock the parts in their assembled relation.

2,452,231
FOLDER
George N. Dobie, Jr., Cleveland, Ohio, assignor to Supervision, Incorporated, Cleveland, Ohio, a corporation of Ohio
Application December 20, 1944, Serial No. 569,095
12 Claims. (Cl. 129—16.8)

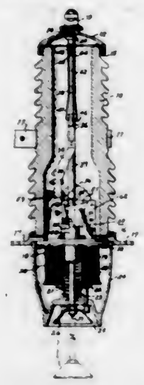


7. A folder of the vertically filing type forming a filing receptacle and a mounting for a pilot card, the folder being formed from a blank of paper stock having three longitudinally-spaced transverse score lines along which it is folded into a multiple ply formation having a closed bottom end and a top opening to provide an elongated vertical compartment extending from the bottom closed end to the top opening and having open sides, two of the score lines defining the closed bottom end and being only slightly spaced one from the other to provide a base support for the edges of a multiplicity of records filed in the compartment, one of the plies being a comparatively short blank end member bent along the third score line and folded into the compartment, said last-mentioned ply being transversely secured adjacent its inner end to a wall of the compartment to form a comparatively short open-sided pocket above the secured area and between said ply and the compartment wall, said ply being formed with a slit extended from adjacent the third score line and in alignment with the secured area to permit passing of an end of a pilot card therethrough into the pocket for support thereof upon the secured area of the plies and the extension of the opposite end thereof exteriorly of the pocket.

2,452,232
COMPRESSOR
William V. Fischer, Akron, Ohio, assignor to The Air-Flo Compressor Company, Akron, Ohio, a corporation of Ohio
Application August 24, 1944, Serial No. 550,945
7 Claims. (Cl. 230—187)

1. An air compressor embodying a crankcase, a plurality of similar cylinders having pistons

therein and mechanism for reciprocating said pistons, said crankcase comprising a housing of six-sided cross section embodying cylinder receiving faces disposed with some of the faces in different angular relation with each other, two of said faces being parallel and either of said parallel faces constituting a base, five of said faces including one



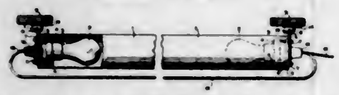
only of said parallel faces having cylinder openings therein for the reception of said cylinders, whereby a greater number of openings are available for the reception of cylinders when the crankcase is arranged for operation on one of the base faces than when arranged for operation on the other base face.

2,452,233

PERMANENT FAULT ISOLATOR TIME-DELAY SWITCH

Roy H. Gerard, Oakland, Calif., and Roy M. Smith, Jeannette, Pa., assignors to Pacific Electric Manufacturing Corporation, San Francisco, Calif., a corporation of California

Application July 24, 1945, Serial No. 606,794
4 Claims. (Cl. 200—108)



1. In a permanent fault circuit isolating device, the combination of an insulating support having spaced circuit terminal members, a stationary contact member carried by one of said terminal members, a movable contact member adapted to cooperate with said stationary contact, means for operatively mounting said movable contact upon the other of said terminal members comprising an elongated rod-like member having a notch intermediate its ends by which it may be latched in a predetermined position with said movable contact in engagement with said stationary contact member, an armature slidably mounted to move freely upon said rod-like member and biased into an inoperative position, an electro-magnet connected in series circuit with said movable contact member and associated with said armature, a latch engaging the notch in said rod-like member for holding said contacts in engagement, a ratchet mechanism adapted to operate in a step by step manner in response to movements of said armature and after a predetermined number of successive operations thereof to trip said latch and permit said rod-like member to move and open the circuit between said movable and stationary contact members, means tending to reset said ratchet mechanism after each step by step movement thereof, and a timing means operative to delay the resetting of said ratchet mechanism by said last means, whereby said ratchet mechanism will be rendered inoperative to trip said latch and permit an opening of the circuit between said stationary and movable contacts when the successive operations of said armature do not occur within a predetermined period of lapsed time.

2,452,234

BED HEATER

John C. Gerdes, Glendale, Calif.

Application June 7, 1946, Serial No. 675,232
1 Claim. (Cl. 219—45)

The combination with a bed having spaced transverse members on the underside, of a relatively long tubular casing, insulation bodies secured in the ends of the casing, an electric incandescent bulb type socket carried by each insulation member upon the inner side for the support of an electric heating unit within the tubular member, a suspension ear secured to each insulation member and extending laterally with respect to the longitudinal axis of the tubular body and beyond the side of the body, means for conducting electric current to said incandescent bulb sockets, and means connected with the laterally extended ends of said ears and carried by the transverse bed members for supporting the device upon the under side of the bed, said last means comprises a pair of plates each secured to a transverse member of the bed, and a hook carried by each of the plates and engaging through an aperture in an ear.

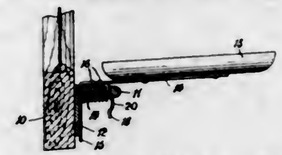
2,452,235

BLACKBOARD

Leon J. Gold, Shorewood, Wis., assignor to Milprint, Inc., Milwaukee, Wis., a corporation of Delaware

No Drawing. Application March 2, 1946, Serial No. 651,616
1 Claim. (Cl. 35—68)

As a new article of manufacture, a blackboard comprising a black sheet of paper having a coating consisting of ten parts ethyl cellulose, five parts of a glyceryl ester of hydrogenated rosin, and two parts of castor oil, the parts being by weight and dissolved in a suitable solvent, said coating having incorporated in it .1 to 5% of a granular abrasive of at least two hundred grain.



2,452,236

FLOWERPOT HOLDER

Herman Herzog, Detroit, Mich.

Application July 19, 1946, Serial No. 684,923
2 Claims. (Cl. 248—205)

1. In a device of the type described, for attachment to the looped handle of an upwardly slidable window sash, a tray, a forwardly projecting arm on said tray having its end portion bent downwardly, and a downwardly extending resiliently mounted clip in spaced relation to said down-

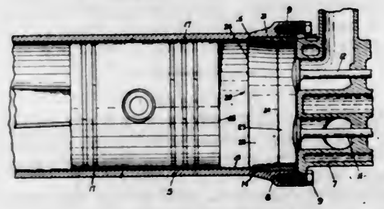
wardly bent portion of said arm, whereby said bent portion and said clip are mutually and detachably insertable within the looped handle of a window sash for the purposes specified.

2,452,237

WATERING TROUGH

Mason A. Hoburg and Frances Hoburg, St. Helena, Calif.; said Frances Hoburg assignor to said Mason A. Hoburg

Application April 20, 1946, Serial No. 663,718
1 Claim. (Cl. 119—72)



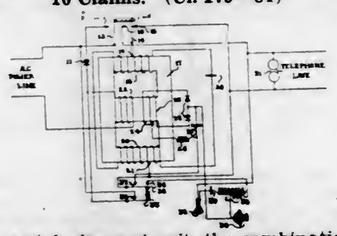
A watering trough for fowl comprising an elongated rectangular receptacle constructed of an acid-resisting material and having a bottom and upwardly extending side and end walls, a drain in said bottom, a compartment for mixing acid and water formed in one end portion of the trough, said compartment having a transverse wall extending upwardly from the bottom of the trough and formed integral therewith, a removable cover on the upper end portion of said compartment, said cover having a plurality of openings for admitting water and acid into the compartment, and the upper portion of said transverse wall having a plurality of small apertures whereby mixed fluid may pass from said compartment into the trough.

2,452,238

INSERT FOR CHANGING THE COMPRESSION RATIO OF INTERNAL-COMBUSTION ENGINES

Raphael Hollingsworth, Hedrick, Iowa

Application January 7, 1948, Serial No. 901
2 Claims. (Cl. 123—48)



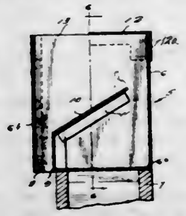
1. In an internal combustion engine including a cylinder and a piston therefor, with the inner peripheral surface at the outer end of the cylinder being formed with an annular recess the inner end of which constitutes an annular shoulder, an annular insert for said cylinder receivable in said recess and of a construction such that one of its ends is in abutting engagement with said shoulder and its other end is substantially flush with the outer end of the cylinder, with the inner peripheral surface of said insert having a first portion tapered inwardly from said one end thereof to a position substantially midway between its ends, and a second portion of a straight contour continued from said tapered portion to the other end of said insert, whereby said inner peripheral surface is arranged entirely within the confines of the inner peripheral surface of said cylinder, a head member for said cylinder engageable with the other end of said insert, and means for clamping said head member on said cylinder, with said insert being held between said shoulder and head member against axial movement relative to said cylinder.

2,452,239

TELEPHONE CIRCUIT

Henry Martin Huge, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio

Application April 15, 1946, Serial No. 662,138
10 Claims. (Cl. 179—84)



5. In a telephone circuit, the combination of a ringing-current circuit, a talking-current circuit, a subharmonic generator comprising input and output branches, saturable magnetic coupling means coupling said input and output branches in conjugate relationship, a capacitor in a closed circuit in said output branch for exciting subharmonic oscillations therein, a first rectifier serially connected in said input branch, first input circuit means for supplying alternating current through said first rectifier to produce said subharmonic oscillations to energize said ringing-current circuit, winding means on said coupling means inductively coupled to said input branch, a second rectifier connected to said winding means, and second input circuit means for supplying alternating current independently of said first rectifier to energize said second rectifier to supply direct current to said talking-current circuit.

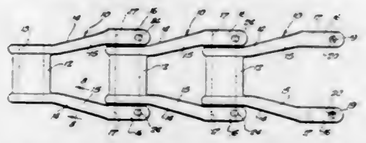
2,452,240

CHIMNEY CAP

John A. Hurt, Carterville, Mo.

Application February 20, 1945, Serial No. 578,807
2 Claims. (Cl. 98—78)

1. A chimney cap comprising a box-like structure open at its top and bottom and adapted for



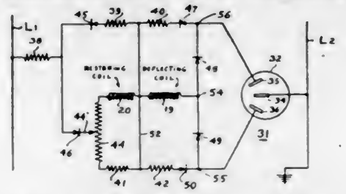
attaching to the top of a chimney, one wall of the cap being spaced outwardly from an adjacent side of the chimney, a relatively short vertical partition in the cap in spaced relation from said one wall to form a vertical draft passage in the cap, a baffle extending from the upper edge of said partition and partly overlying the top of the chimney and a fragmental top for the cap and partly overlying the baffle in spaced relation therefrom, said baffle and fragmentary top forming a tortuous passage for flue gases rising in the chimney.

2,452,241
MEASURING IMPLEMENT
Frederick H. Jantzen, Bronx, N. Y., assignor of fifty per cent to Maxwell R. Ginsberg
Application May 13, 1944, Serial No. 535,517
3 Claims. (Cl. 33—141)

1. A linear measuring implement, comprising a long handle in hingedly connected sections foldable one over the other, a measuring wheel journalled at the free end of one of said handle sections, a longitudinally extending screw shaft located to one side of said one handle section and journalled at both ends on said handle section and operated by said measuring wheel, an indicator operated by said screw shaft, said measuring wheel, indicator and screw shaft being so constructed and arranged as to be located between and be protected by said handle sections when they are folded together, means for releasably retaining said hingedly connected handle sections in said thus folded condition and means for rigidly holding the hinged handle sections in extended relation.

2,452,242
PINTLE CHAIN
Clarence K. Johnson, Portland, Oreg., assignor to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon
Application March 21, 1945, Serial No. 584,008
4 Claims. (Cl. 74—254)

1. A chain comprising, in combination, a series of links each of which includes a tubular portion at one end having a through bore providing a lateral sleeve bearing and having arms integral therewith and extending longitudinally in one direction from opposite sides of the tubular portion, said arms having aligned lateral bores at their extending ends and being separated at said extending ends an amount such that the tubular portion of the next succeeding link fits therebetween, said links being joined by connecting pins extending through said sleeve bearings and bores of adjacent links, said connecting pins being rotatable in said sleeve bearings and the ends of said connecting pins being substantially flush with the outer side surfaces of said arms, the extending ends of said arms having transverse bores intersecting said lateral bores near one side thereof, said connecting pins having chordal slots adopted to register with said transverse bores to form fastener pin openings, fastener pins fitting into said openings to secure the connecting pins against axial and rotational movement relative to said arms, and means flush with the outer surface of each of said arm ends for permanently securing the fastener pins in place.



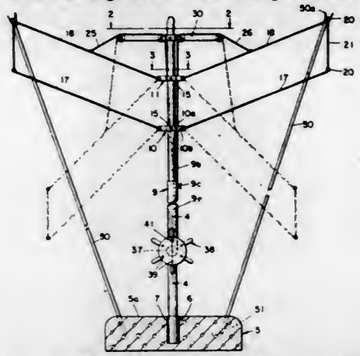
2,452,243
SELF-TIPPING CONVEYER BUCKET
George H. Johnson, Rockford, Ill., assignor to The Atwood Vacuum Machine Company, Rockford, Ill., a copartnership
Application October 6, 1945, Serial No. 620,784
6 Claims. (Cl. 294—73)

1. In a dump bucket structure comprising a carrier yoke and a bucket pivotally mounted in said yoke, means for releasably locking said bucket in rigid relation to said yoke comprising a latch bolt slidably mounted on the yoke in radially spaced relation to the pivots, a keeper on the bucket for engagement by said bolt, said bolt having a pin projection on the side thereof, a slide guided on the yoke and movable in transverse relation to said bolt and having a slot receiving said pin projection to reciprocate said bolt by reciprocatory movement of said slide, a manually oscillatable lever pivoted on said yoke intermediate its ends, and a toggle link pivotally connected to said slide at one end and at the other to the inner end of said lever, said lever being movable to a locking position in which its pivotal connection to said link is aligned with the lever pivot and the link's pivotal connection to said slide.

2,452,244
ELECTRICAL RATIO METER CIRCUIT
Knud J. Knudsen, Waterbury, Conn., assignor to The Lewis Engineering Company, Naugatuck, Conn., a corporation of Connecticut
Application March 31, 1944, Serial No. 528,839
18 Claims. (Cl. 177—351)

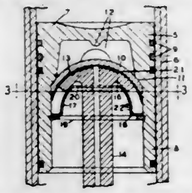
2. In an indicator arranged to be energized from a source of alternating current and including a meter having a deflecting coil, a potentiometer, a plurality of rectifiers connected in a closed loop at the same polarity with respect to said loop, a first pair of terminals on said loop dividing said rectifiers into two groups, a second pair of terminals on said loop between rectifiers in said groups, respectively, and means connecting said

deflecting coil to said first pair of said terminals and said potentiometer to said second pair of terminals.



2,452,245
HOSE CLAMP
Alexander A. Kollman, Los Angeles, Calif.
Application April 27, 1944, Serial No. 533,008
1 Claim. (Cl. 24—19)

A device of the character described for engaging and drawing to a desired position an apertured end of a band-like element, comprising a relatively long cylindrical guide sleeve open at each end, the guide sleeve having a side opening from one end through a major portion of its length to form a narrow guide slot, the material of the guide sleeve at each side of said slot being extended outwardly, then extended at right angles to the first line of extension away from the sleeve and finally extended inwardly in substantially parallel relation with the first extension to form a guide through which the apertured end of the band may extend, the said guide being adapted to be secured in a fixed position, a screw extending axially through the sleeve and having a head upon one end, a bearing member carried by the screw adjacent to the head and having a depressed face engaging over and bearing against the other end of the sleeve, a dogging sleeve of substantially cylindrical form mounted within the guide sleeve for sliding movement therein, said screw being threaded through said dogging sleeve, and a dogging prong integral with the dogging sleeve and extending through and snugly engaging in said guide slot and adapted for engagement in an aperture in the band-like element, the dogging prong having sliding engagement in the guide slot.

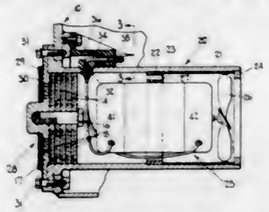


2,452,246
CLOTHESLINE DEVICE
Semen Kronhaus, Los Angeles, Calif.
Application November 29, 1946, Serial No. 712,767
2 Claims. (Cl. 211—119.17)

1. A clothes line device comprising a post adapted to be supported in upright position, a plurality of vertically spaced clothes hanging rods projecting laterally from diametrically opposite sides of and pivotally connected at their inner ends to the post for swinging movement in a plane longitudinally of the post, means connecting the outer ends of the respective rods to the outer end of each adjacent rod, a cross bar adjacent the top end of the post, sheave means rotatably carried by the cross bar, cables each secured at one end to the topmost of the said rods, spindle means rotatably carried by the lower end portion of the post and having the other end portions of the

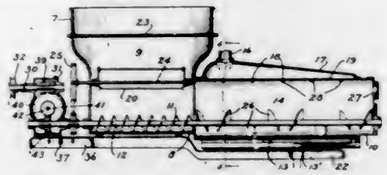
cables wound thereabout, means for rotating the spindle means, and means for locking the spindle means against rotation.

2,452,247
PISTON ROD CONNECTING DEVICE
Everett P. Larsh, Dayton, Ohio
Application January 24, 1946, Serial No. 643,046
3 Claims. (Cl. 309—20)



1. In combination with a piston having a head and a skirt, said piston having adjacent said head an inclined annular shoulder, a bearing member separate from said piston, having a convex surface movably engaging said shoulder and having a concave bearing surface facing the open end of said skirt and conforming substantially to a section of a sphere, a piston rod having a head provided with a bearing surface conforming to and in movable supporting contact with the concave bearing surface of said bearing member, a retaining member engaging said piston rod head and having at that end thereof which is remote from said piston rod head a part adjacent the inner surface of said skirt, said skirt having a circumferential recess, and a split ring of resilient material adapted to be sprung about said piston rod and removably mounted in said recess in supporting engagement with said part of said retaining member, said split ring removably supporting said retaining member, said piston rod head and said bearing member in operative relation one to the other with said bearing member in engagement with said shoulder.

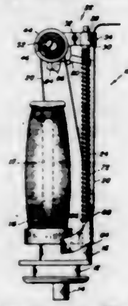
2,452,248
ELECTRICAL MINE APPARATUS
Arthur L. Lee, Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio
Application May 12, 1944, Serial No. 535,366
4 Claims. (Cl. 172—36)



1. In explosion-proof electrical apparatus, the combination with a casing adapted to house spark

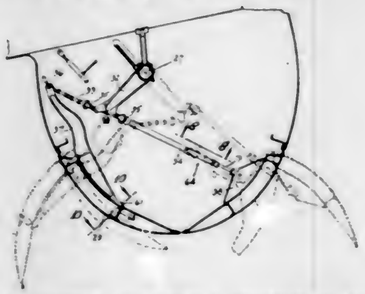
producing apparatus, of a unit insertable and removable as such relative to said casing, said unit including a fan housing, a fan mounted in said housing and providing an air passageway between it and the housing interior, electrical plug contactors on said housing, cooperating plug recep-

tacles mounted on said casing adapted to receive said contactors when said unit is inserted in said casing to make electrical contact therewith and to break said electrical contact when said unit is removed, and a flame proof breather carried in one end of said housing and forming a part of said unit.



2,452,249
DRIER FOR GRANULAR PLASTIC
Roy R. Leiske, Milwaukee, Wis.
Application March 4, 1946, Serial No. 651,864
2 Claims. (Cl. 34—183)

1. In a drying unit for granular plastic, a casing having an upwardly open trough section and a horizontally alined enclosed trough section separated from the open section by a partition having a restricted material passage therein, said open section having a downwardly directed open inlet extending throughout its length and said enclosed section having a restricted lower outlet at its end remote from said partition, horizontally alined screw conveyors coacting with the bottoms of the successive trough sections on opposite sides of said partition, the conveyor within said open section having a continuous helical flight of relatively small diameter and pitch and the conveyor within said enclosed section having a periodically interrupted helical flight of larger diameter and greater pitch, an agitator rotatable within said inlet above said smaller conveyor, a suction device for withdrawing vapor upwardly from within said enclosed trough section, and common means for actuating said conveyors and said agitator and said device.

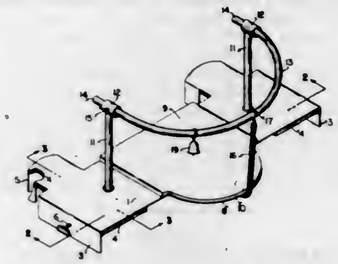


2,452,250
BRAIDING MACHINE CARRIER
Albert T. Lochner, Louisville, Ky.
Application February 9, 1948, Serial No. 7,137
15 Claims. (Cl. 87—56)

1. A braiding machine carrier comprising a support, a spindle mounted on said support, a wound bobbin carried rigidly by said spindle, a pair of support rods secured to said support, a bracket swivelly secured to said support rods, a pair of cooperating guide disks for the strand unwound from the bobbin carried by the bracket, resilient means for normally retaining said disks in a clamping relation to lock the strand therebetween, an actuating rod carried by said support and disposed parallel with the support rods, a guide member slidably mounted on said support rods and operatively associated with the actuating rod, said guide member being moved on

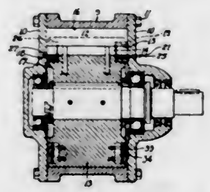
the rods responsive to a pulling force exerted by the strand, means on said actuating rod for moving the same upon engagement thereof by the guide member, an annular groove formed in said actuating rod, a release member for said disks pivoted to said bracket and having one end received in said groove, resilient means on said support rods for normally retaining said guide member in a seated placement on the support.

2,452,251
RETRACTABLE LANDING GEAR FAIRING
Eric L. Martin, Santa Monica, Calif., assignor to North American Aviation, Inc., Inglewood, Calif., a corporation of Delaware
Application March 19, 1942, Serial No. 435,253
20 Claims. (Cl. 244—102)



1. An aircraft including a retractable landing gear, a fairing therefor including a door or doors, and means connecting said gear and door or doors and actuated by said landing gear and both opening and closing said door or doors during each effective retracting movement and each effective extending movement of the landing gear, said door or doors having a yieldable section for contact with the landing gear in its extended position.

2,452,252
CHILD'S SEAT ATTACHMENT FOR BARBERS' CHAIRS
Anthony N. Masabny, Allston, Mass.
Application May 7, 1947, Serial No. 746,473
3 Claims. (Cl. 155—131)

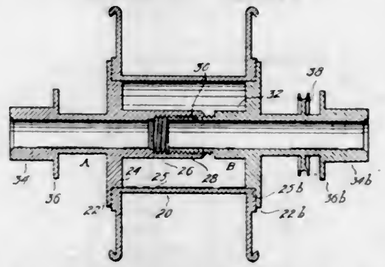


1. A child's seat attachment for barber's chair comprising a seat member of sheet material

adapted to be supported on the arms of a barber's chair, said seat member having at each end a down-turned flange which is situated on the outside of the chair arm when the device is being used and also having at its rear end a down-

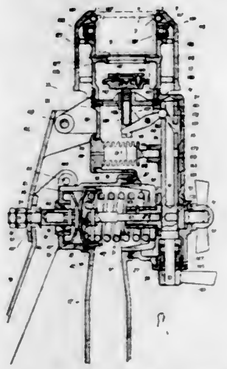
turned flange to engage the rear end of each chair arm, two posts rising from said seat member and a bowed guard member adjustably carried by said posts and serving to prevent the child from slipping forwardly on the seat member.

2,452,253
FLOATING SEALING DEVICE
Daniel F. McGill, Portland, Oreg.
Application January 29, 1945, Serial No. 575,001
10 Claims. (Cl. 103—202)



1. A sealing device comprising in combination a stator, a rotor, and a sealing unit, said sealing unit comprising a pair of sealing rings disposed between adjacent portions of the stator and rotor on opposite ends of said rotor, and means interconnecting said sealing rings for maintaining them in sealing engagement with said stator, said sealing rings being caused to rotate with said rotor and having sliding engagement with said rotor and forming therewith a seal whereby said rotor may have axial movement relative to said stator and said sealing unit.

2,452,254
LIQUID POLYMERIC DIMETHYL SILICONES
Rob Roy McGregor, Verona, and Earl Leathen Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application April 2, 1945, Serial No. 586,270
11 Claims. (Cl. 260—448.2)

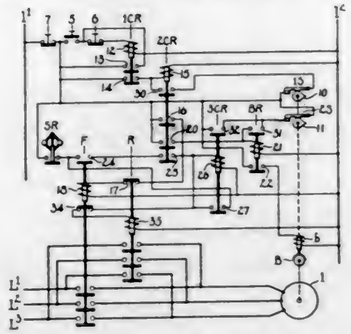


1. A fluid composition composed of a mixture of liquid polymeric dimethyl silicones having two methyl radicals attached to each silicon atom and a viscosity above 200 Saybolt seconds at 30° C.

2,452,255
SPOOL ADAPTER FOR ROPE LAYERS OR STRANDING MACHINES
Michael McKosky, New Haven, Conn.
Application November 29, 1946, Serial No. 713,049
3 Claims. (Cl. 57—59)

1. In a stranding machine of the type having a rotary flier with a plurality of cradles trunnioned therein, the improvement comprising an adapter for rotatably supporting spools of varying sizes in a given cradle, said adapter including coacting members each having a trunnion portion rotatably supported in the cradle, a respective spool engaging flange on each member and a joint for coupling said members to one another, with provision for varying the distance between said flanges so as to accommodate and firmly grip spools of varying axial lengths.

2,452,256
FLUID HANDLING MECHANISM
Jacques Muller, La Garenne-Colombes, France; vested in the Attorney General of the United States
Original application March 9, 1938, Serial No. 194,919, now Patent No. 2,434,426, dated January 13, 1948. Divided and this application April 7, 1939, Serial No. 266,692. In France March 20, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires March 20, 1957
2 Claims. (Cl. 137—69)



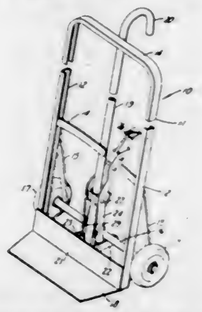
1. In a device of the class described, an obturator, a nozzle adapted to be affixed thereto and separated therefrom, a valve controlling the flow of fluid through the nozzle, means precluding removal of the nozzle from the obturator when the valve is open and means precluding opening of the valve when the fluid in the nozzle is not under pressure.

2,452,257

CONTROL FOR MOTOR-DRIVEN APPARATUS

John M. Newman, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware

Application March 22, 1945, Serial No. 584,187
9 Claims. (Cl. 318—274)



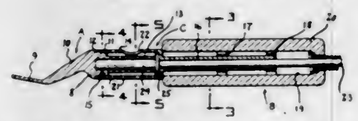
8. In indexing control for a motor driven machine, in combination, a motor, a power supply circuit, motor control means to connect said motor to said circuit for running and progressively to slow down and disconnect said motor preparatory to stopping, said motor control means comprising means rendering such disconnection of said motor dependent upon reduction of the motor speed to a given value and further comprising means rendering initiation of such slow down dependent upon given positioning of a part thereof which is so positioned in repeated cycles upon continuous rotation of said motor, a brake for said motor, and brake control means including a part movable repeatedly into a given position upon continuous rotation of said motor, said brake control means in such given position of its said part being effective to set said brake when but only when said motor has been first slowed down and disconnected from circuit by said motor control means for free coasting into the limit.

2,452,258

HAND TRUCK

Adolph Nielsen, Oakland, Calif.

Application February 11, 1946, Serial No. 646,758
1 Claim. (Cl. 214—82)



A hand truck comprising a flat open frame, an axle arranged transversely of the frame adjacent one end thereof and at the rear side of the frame, wheels carried by the axle, a rigid apron fixed to said wheeled end of the frame and projecting forwardly thereof at the opposite side of the frame from the axle, a pusher plate arranged transversely of the frame and normally lying flatwise against the front side of the frame in close proximity to the apron, a pair of links connected at their forward ends to the rear side of said plate and extending rearwardly, a pair of relatively fixed actuating levers pivoted intermediate their ends to the frame at a point on said frame spaced from said pusher plate, said actuating levers extending toward the pusher plate and thence rearwardly and connected at their terminals to the other ends of said links whereby oscillation of said levers will be accompanied by movement of the pusher plate across said apron toward and away from the frame, a pedal fitted to the other ends of said actuating levers to provide manual means for actuating the same.

2,452,259

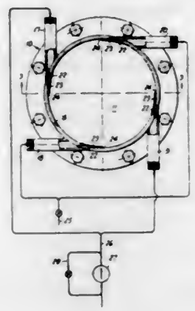
ELECTRIC BURNING-IN KNIFE

Frank D. Pabis, Amsterdam, N. Y.

Application November 15, 1946, Serial No. 709,958
3 Claims. (Cl. 219—21)

1. In a burning-in hand tool of the class described, an electrically heated head unit including a body portion provided on one side with an integral axially positioned and elongated socket, and provided on an opposite side with a projecting tang terminating in a laterally offset flat blade, a heating element mounted in said elongated socket, a coupling unit attached at one end to said head unit and partially enclosing and surrounding, in spaced relation, said elongated socket, said portion of the coupling unit being provided with a multiplicity of perforations for free circulation of cooling air, said coupling unit being further provided with a reduced elongated tubular shank of a diameter matching that of the socket and in axial alignment with the socket, said shank being adapted to accommodate a cord with which the electric heating element is provided, and openwork spacing spiders on said shank adapted to accommodate a centrally bored hand-grip.

2,452,260



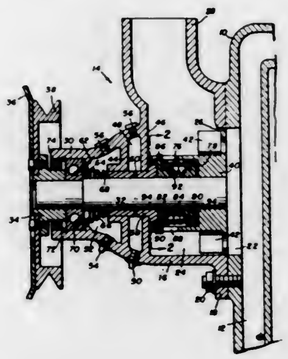
HEATING APPARATUS

David D. Peebles, Hillsborough, Calif., assignor to Golden State Company, Ltd., San Francisco, Calif., a corporation of Delaware

Application December 23, 1944, Serial No. 569,551
3 Claims. (Cl. 261—79)

1. Apparatus for heating a liquid by direct contact with steam, which comprises, a casing providing a circular peripheral wall and end walls forming an internal circular chamber, the length of said chamber measured in the direction of its axis being a minor fraction of the diameter of said chamber, said peripheral wall having a plurality of apertures extending therethrough and spaced circumferentially of said wall, each of said apertures extending substantially the length of said peripheral wall and being directed in the same circumferential direction tangential to the inner face of said peripheral wall, said apparatus having a liquid conduit connected to one of said apertures to deliver liquid into said chamber tangentially of said peripheral wall, one of said end walls having a centrally disposed outlet therein

so that said liquid spirals inwardly in said chamber and discharges through said outlet, said apparatus having a steam conduit connected to another of said apertures to deliver steam into



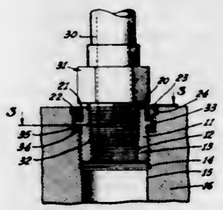
said chamber tangentially of said peripheral wall into contact with the outer peripheral surface of the spiral of liquid in said chamber so as to uniformly and rapidly heat said liquid.

2,452,261

PUMP PACKING MEANS

James H. Roberts, Osceola, Ark., assignor of one-fourth to Bruce Ivy, Osceola, Ark.

Application May 9, 1947, Serial No. 747,081
4 Claims. (Cl. 103—103)



1. In a pump assembly having a casing, a pump chamber in said casing, an impeller shaft journaled in said casing and an impeller hub carried by said shaft in said chamber, the combination of the walls of an open ended recess in said hub, a journal for said shaft extending into said recess, a packing assembly in said recess and surrounding said shaft, said packing assembly including spaced collars surrounding said shaft, radially and axially extensible means connecting said collars for retaining them in a unitary expansible assembly, said collars having shoulders extending towards each other, grooves on said shoulders, said extensible means having annular portions yieldingly engaged in said grooves.

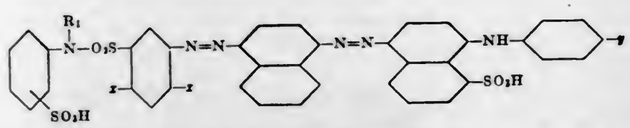
2,452,262

FLUID SEAL FOR INSERTS

Joseph Rosan, North Hollywood, Calif.

Application December 18, 1944, Serial No. 568,589
2 Claims. (Cl. 285—39)

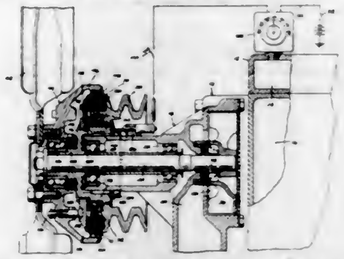
1. In an insert adapted to be installed in a screw-threaded and counterbored socket in a body to form, a fluid-tight connection therewith, the combination of a cylindrical body having external screw threads on the lower portion thereof adapted to fit the screw threads of said socket, a plurality of circumferentially spaced, longitudinally extending serrations on the external upper portion of said body, a radial flange projecting outwardly from said body intermediate said upper and lower portions, a resilient annular sealing ring disposed between said flange and the shoulder formed at the junction of said counterbore with said socket, said ring being compressed between said flange and said shoulder to form a fluid-tight seal between said insert and said body, a locking ring having internal serrations mating with and slidable on the serrations of said insert body, and a plurality of axially extending broaching serrations formed on the outer periphery of said ring, said broaching serrations being adapted to broach the walls of said counterbore when said ring is driven down over said insert body, thereby locking said insert body against rotation.



2,452,263

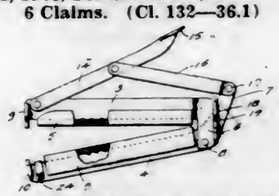
DISAZO DYESTUFFS

Rudolf Ruegg, Basel, Switzerland, assignor to Ciba Limited, Basel, Switzerland, a Swiss firm



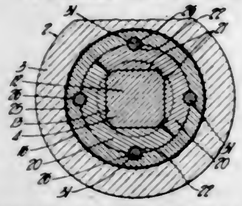
No Drawing. Application January 20, 1947, Serial No. 723,205. In Switzerland January 31, 1946
4 Claims. (Cl. 260—190)

1. A disazo-dyestuff of the formula



in which R_1 represents an alkyl radical containing at most two carbon atoms, one x represents hydrogen and the other x a member selected from the group consisting of hydrogen and methyl, and y represents a member selected from the group consisting of hydrogen and methyl.

2,452,264
COOLING APPARATUS, TEMPERATURE CONTROL
Robert C. Russell, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application March 31, 1945, Serial No. 585,992
12 Claims. (Cl. 123—178)

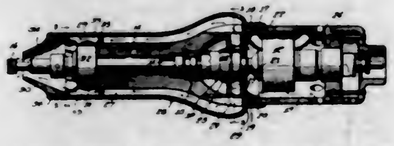


5. In combination with an internal combustion engine, a cooling system comprising a pump for circulating liquid through the engine, an air circulating fan, a drive means for the pump and fan, a pulley driven from the driving source, a shaft coupling the pulley to the pump, an electromagnetic clutch telescoping the pump shaft coupling the pulley to the fan, an electric circuit for energizing said clutch, and means responsive to changes in the operating temperature of the engine for controlling the energization of the clutch, said clutch comprising an annular electromagnet mounted in the pulley, a plurality of disks outward radially disposed of the electromagnet some secured for rotation with the pulley and the others with the fan, an end plate constituting a magnetic pole relatively axially movably mounted on the pulley, a portion of the pulley constituting the other pole face of the clutch, and means within the magnetic flux circuit for substantially reducing residual magnetism, and thereby prevent drag between the disks upon de-energization of the coupling.

2,452,265
SCALP PROTECTOR
Rudy A. Satrian, Chattanooga, Tenn.
Substituted for abandoned application Serial No. 261,333, March 11, 1939. This application October 21, 1946, Serial No. 704,786
6 Claims. (Cl. 132—36.1)

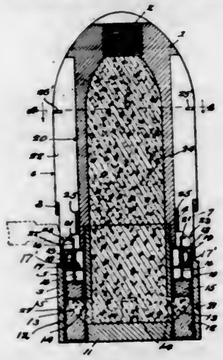
1. In a scalp protector of the character described, a pair of jaw members adapted to be brought into parallel gripping relation, means pivotally coupling said jaws together at one end of the device, an arm integral with one of said jaws at the said pivotally connected ends and extending at an obtuse angle with respect to and across the adjacent jaw, a lever bar pivotally attached to one side of the said adjacent jaw, a link pivotally coupling said bar with the free end of said arm, said bar and link when in alined relation operating upon said arm to hold said jaws in parallel relation, and means at the ends of said device for rotatably supporting a hair winding cylinder, said means comprising at one end of the device, two separable members each carried by a jaw and cooperating to form a bearing for the support of the adjacent end of the cylinder.

2,452,266
ROLLING MILL ROLL
Fritz M. Scharff, Lorain, Ohio, assignor to National Tube Company, a corporation of New Jersey
Application June 7, 1944, Serial No. 539,098
6 Claims. (Cl. 80—58)



1. A composite roll comprising a spindle member having an annular groove therein, the inner periphery of which is non-circular, and a face member mounted on said spindle having a counterbore at one end thereof surrounding said groove, a split ring disposed in said groove and said counterbore, the inner periphery of said split ring having a close fit with the periphery of said groove, a ring disposed around said split ring and means for securing said ring and said split ring to said face member.

2,452,267
ELEVATABLE BED TRAILER
Arthur G. Schramm, Phoenix, Ariz.
Application April 15, 1947, Serial No. 741,458
5 Claims. (Cl. 280—6)

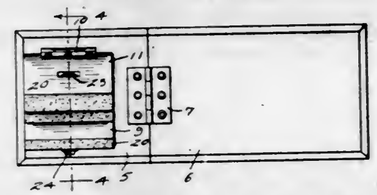


1. A trailer having a body including a bed, wheel spindle supporting arms having stub attaching shafts journalled on each side of said bed, wheel spindles carrying wheels positioned at the outer ends of said arms, and leaf springs attached to said arms at their junction with said stub shafts extending angularly upward therefrom, hydraulic cylinders and parallel slide tubes pivotally attached to the forward portion of said trailer body and extending rearwardly along the sides thereof, pistons in said cylinders operating slides supported on said parallel slide tubes, latch mechanism operative on said slides to detain them on said slide tubes; and a hydraulic pump adapted to deliver fluid under pressure to said cylinders independently and selectively.

2,452,268
MOTOR HAND TOOL ASSEMBLY
Robert Schumann, Racine, Wis.
Application June 29, 1945, Serial No. 602,307
16 Claims. (Cl. 172—36)

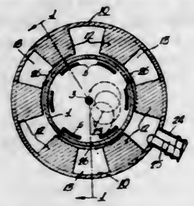
1. A tool assembly including an operating shaft, a motor to operate said shaft, means operable by one of said parts to induce air to travel in heat-transferring relation to the assembly and discharge adjacent the tool-operating end of the assembly and means for imparting whirling action to the air at a point adjacent its discharge from the assembly.

2,452,269
EXPLOSIVE PROJECTILE
Donald Guilford Stine, Mount Carmel, Pa.
Application March 8, 1944, Serial No. 525,557
2 Claims. (Cl. 102—62)



1. An explosive shell including main and butt members cooperating to provide an explosive chamber, there being longitudinal grooves in the main member and longitudinal bores in the butt member opening into the grooves, said grooves and bores being substantially alined, a shell removably seated in each bore, each shell being in communication with the explosive chamber, a cap in each shell, a yieldingly restrained firing pin in each shell normally in close proximity to the cap, and separate means movably mounted in the grooves for actuating the respective firing pins to explode the caps, said means including fins pivotally mounted in the grooves, lifting fingers carried by the fins and positioned for movement into engagement with and past the firing pins, and a spring interposed between each fin and the main member for projecting the fin outwardly from the groove.

2,452,270
TRAILER
Clarence C. Stuart, Dearborn, Mich., assignor to Traffic Transport Engineering, Inc., Dearborn, Mich., a corporation of Michigan
Application March 5, 1945, Serial No. 581,063
7 Claims. (Cl. 296—1)



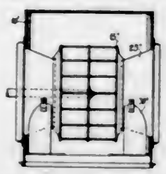
5. In a vehicle adapted for the transporting of automotive vehicle chassis, a frame, a pair of parallel lower track members mounted on said frame, a second pair of parallel track members mounted on said frame above the lower track members and converging downwardly and rearwardly of the vehicle so that the rear ends of the lower and second pairs of track members are adjacent each other, the second mentioned track members when in vehicle supporting position overlying the lower track members, each track of the second pair of track members comprising a front and a rear section, hinge means for supporting said front track sections on said frame so that they can be swung into an upright position to thereby clear the lower tracks preparatory to loading a vehicle chassis on the lower tracks, a third pair of parallel track members mounted on said frame above said aforesaid track members, a hinge connection between the rear end of said frame and the rear end of each of said rear sections, the rear ends of the front sections and the rear ends of the upper tracks terminating substantially the same distance from the hinged connections at the rear ends of said rear sections whereby the rear sections can be swung from a position where the front ends of the rear sections are adjacent the rear ends of the front sections to a position where the front ends of the rear sections are adjacent the rear ends of the upper tracks, the said rear sections in the first position cooperating with said front sections to support a vehicle chassis and in said second position serving as a ramp for rolling a vehicle chassis upwardly on to the upper track members.

2,452,271
LEATHER VISE
Roland G. Sweet, Pleasanton, Calif., assignor to Alfred Roberts, Concord, Calif.
Application June 6, 1947, Serial No. 753,023
2 Claims. (Cl. 69—19)

1. A work holding vise comprising a base, a pair of uprights on the base and means for drawing the upper ends of said uprights together and against work interposed therebetween, a block provided on the base, one of said uprights being hinged to the block, and means whereby the block and the uprights can be rotated as a unit on the base and held.

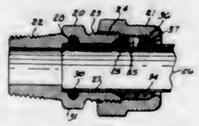
2,452,272
MAGNETRON
John W. Tiley, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 28, 1944, Serial No. 560,875
7 Claims. (Cl. 250—27.5)

1. A magnetron oscillator, comprising an inner electron tube structure comprising an axial cath-



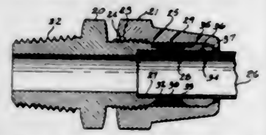
ode element, a segmental anode surrounding said cathode element and an evacuated envelope enclosing said cathode element and said segmental anode, means connected to the anode segments forming a tank circuit for each anode segment, and an outer cavity resonator surrounding said tube structure and coaxial therewith, said resonator having a plurality of resonant cavities corresponding in number to the number of anode segments and circularly located about the anode segments to receive energy therefrom.

2,452,273
APPLICATOR
Robert H. Van Sant, Alexandria, Va.
Application August 20, 1945, Serial No. 611,475
14 Claims. (Cl. 128—272)



1. An applicator comprising a rigid cellular structure moulded with a liquid medicament sealed therein, said cellular structure provided with one sunderable portion constituting a discharge for the contained medicament and further provided with another sunderable portion constituting an air inlet.

2,452,274
FAN HAVING AUXILIARY CUTOFF
Thomas A. Walters, Detroit, Mich., assignor to American Blower Corporation, Detroit, Mich., a corporation of Delaware
Application September 21, 1944, Serial No. 555,049
6 Claims. (Cl. 230—132)

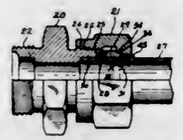


1. In a centrifugal fan, a fan housing, an inlet throat extending within said housing, a fan-wheel positioned in said housing for drawing air through the inlet throat into said wheel and discharging the same from the fan housing, a discharge opening in said housing of substantially the same width as said housing, and an air cut-off member positioned to one side of the peripheral air discharge surface of said fan-wheel and adjacent a side of said housing to stop rotation of air in said housing around said throat and direct said air toward the discharge opening of said housing.

2,452,275
TUBE FITTING COUPLING
George V. Woodling, Cleveland, Ohio
Application December 22, 1944, Serial No. 569,350
2 Claims. (Cl. 285—122)

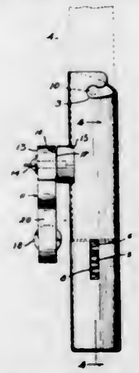
1. A coupling device for attaching a tube to a threaded fitting element having an end and a bore extending from said end to receive the tube, means including a sleeve nut and a split cam ring contractible about said tube and engaging the end of the fitting element for anchoring the tube to the fitting element, said cam ring and said end having annular opposed surfaces for making a surface-to-surface abuttable engagement with each other, an internal annular groove having at least one wall in the fitting element extending outwardly from the bore, and seal means in the groove surrounding the tube and engaging said wall to seal between the tube and the fitting element independently of any mechanical pressure incident to the anchoring of the sleeve nut and cam ring to the fitting element.

2,452,276
TUBE FITTING DEVICE
George V. Woodling, Cleveland, Ohio
Application December 22, 1944, Serial No. 569,351
4 Claims. (Cl. 285—122)



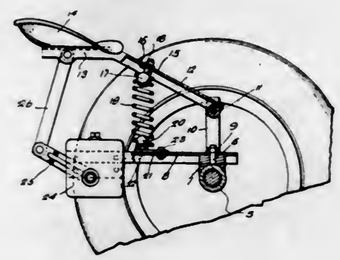
1. A coupling device for attaching a tube to a fitting element having an abutting end surface, said device comprising a hollow member adapted to fit around the tube and having means to engage the fitting element for securing said member to said fitting element, a solid collar in the hollow member adapted to surround the tube and be directly pressed tightly against the abutting end surface of the fitting element, a split collar in the hollow member adapted to be contracted about the tube at a place remote from the end of the tube, said solid collar and split collar having abutting cam surfaces to contract the split collar against the tube, said hollow member engaging said split collar and forcing same against the solid collar, whereby the solid collar is tightly pressed against the abutting end surface of the fitting element to make a seal therebetween and whereby the split collar is forceably contracted about the tube to clamp same against longitudinal movement in the hollow member, and seal means between the solid collar and the tube.

2,452,277
TUBE COUPLING
George V. Woodling, Cleveland, Ohio
Application May 10, 1945, Serial No. 593,006
9 Claims. (Cl. 285—122)



1. A coupling device for attachment to a tube and for use with annular sealing means, said coupling device comprising a hollow fitting element having an end portion provided with an end surface, said end portion receiving the tube and having a bore surrounding the tube adjacent the end surface to receive said sealing means, and connecting means including a washer and contractible means gripping the tube for connecting the tube to the fitting element, said washer surrounding the tube and making contact engagement with the end surface of the fitting element for enclosing the sealing means in the bore, said contractible means abutting against the washer and constituting non-extrusion means to prevent the sealing means from extruding past the washer along the tube.

2,452,278
TUBE COUPLING DEVICE
George V. Woodling, Cleveland, Ohio
Application June 29, 1945, Serial No. 602,207
7 Claims. (Cl. 285—122)

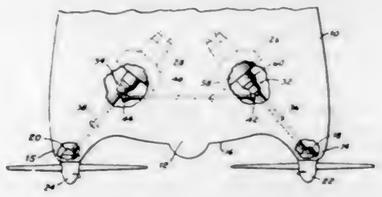


1. A coupling device for attachment to a tube and for use with annular sealing means, said coupling device comprising a hollow fitting element having an end portion provided with an end surface, said end portion receiving the tube and having a bore surrounding the tube adjacent the end surface to receive said sealing means, and connecting means including a washer and contractible means gripping the tube for connecting the tube to the fitting element, said washer surrounding the tube and making contact engagement with the end surface of the fitting element for enclosing the sealing means in the bore, said contractible means abutting against the washer and constituting non-extrusion means to prevent the sealing means from extruding past the washer along the tube, said contractible means having internal wall means for engaging the tube, said internal wall means having an internal rib for radially projecting inwardly of the wall of the tube, said internal wall means on at least one side of the internal rib defining substantially a cylindrical surface for frictionally engaging and supporting the tube.

2,452,279
HOLDER FOR FISHING POLES
Charles W. Young, Cuyahoga Falls, Ohio
Application August 14, 1946, Serial No. 690,482
1 Claim. (Cl. 248—40)

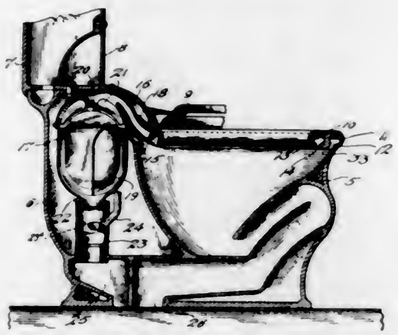
A holder for a fishing pole of the type having a lateral finger rest on the handle end thereof, said holder comprising a tubular socket member adapted for the insertion of said handle end downwardly into the same and being provided with a bayonet slot in the upper end thereof into which said finger rest may be inserted by rotation of said handle end in the socket member, means in said socket member forming a seat for said handle end and adapted to exert pressure upwardly against the same when the finger rest is inserted in said slot to thereby prevent said handle end from being accidentally rotated to withdraw the finger rest out of said slot, and means for attaching said socket member to a support in upright position for swinging adjustment into different inclined positions, the first mentioned means comprising a seat forming disc in the socket member vertically slidable therein, a coil spring in said socket member backing said disc, and coacting lugs and slots on said disc and in said socket member, respectively, for limiting sliding movement of said disc upwardly and preventing rotation of said disc in said socket member.

2,452,280
SHOCK ABSORBING SEAT STRUCTURE FOR TRACTORS
Virgil Zahller, Belle Center, Ohio, assignor to Isaac J. Fickel, Belle Center, Ohio
Application November 29, 1944, Serial No. 565,679
1 Claim. (Cl. 155—51)



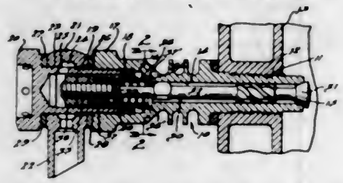
A tractor seat structure for attachment to the axle housing of the tractor comprising an elongated supporting bar, means for attaching said bar at one end thereof to said housing to extend horizontally rearwardly therefrom, a pair of laterally spaced posts arising from said end of said bar, an arm pivoted at one end between said posts to extend rearwardly of said housing along said bar and swing vertically, a seat supported by the other end of said arm, hydraulic shock absorbing means on the other end of said bar including a vertically swingable crank, a link having the ends thereof pivoted to said crank and to said other end of said arm, and an expansion coil spring interposed between said bar and arm intermediate the ends thereof and having its ends connected to said bar and arm for adjustment along the same.

2,452,281
AIRCRAFT PROPULSION MEANS
Charles H. Zimmerman, Nichols, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application July 6, 1944, Serial No. 543,632
19 Claims. (Cl. 244—60)



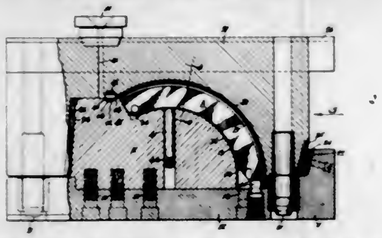
1. In an aircraft, a streamlined body having two laterally spaced propellers including propeller shafts mounted for opposite rotation at the leading edge thereof, a pilot compartment within said body between said propellers, two like rotating engines mounted within said body having driving shafts on opposite sides of said compartment, power transmission means connecting the shafts

of said engines respectively with the shafts of said propellers including two-speed mechanism, means for interconnecting said transmission means including a transverse shaft capable of transmitting the power from either engine to the



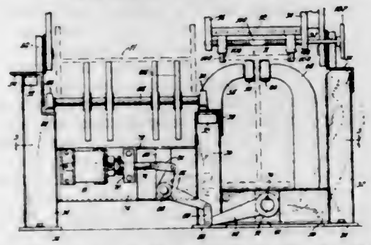
transmission means associated with the other engine, means for reversing the drive of one of said engines in one of said engine transmission means, and means operative upon reversal of torque in the driving shaft of either engine for disconnecting that engine from its transmission means.

2,452,282
VENTILATED TOILET
William F. Auer, Menasha, Wis.
Application December 20, 1945, Serial No. 636,186
2 Claims. (Cl. 4—216)



1. A ventilated toilet comprising a bowl having a rim projecting inwardly at its upper edge and with its bottom inclined upwardly, said rim having a water passage and an air passage, the air passage being positioned inwardly of the water passage, and each passage having an opening in the inclined bottom of the rim, with the opening for the air passage positioned above the horizontal plane of the opening for the water passage to prevent entrance of water into the air passage, said bowl also having a chamber at its rear portion and a waste passage at its bottom, a motor housing mounted in the chamber and connected to the air passage and to the waste passage, a motor-operated suction fan in the housing for exhausting fumes from the bowl into the waste passage, a valve between the housing and the waste pipe, a switch for the motor of the fan and including a toggle lever, a manually operated shaft journaled in one side of the chamber, a cam on the shaft operatively engaged with the toggle lever to open and close the switch, and means operatively connecting the shaft to the valve for simultaneous opening and closing of the valve and switch.

2,452,283
VALVE CATCHER
Thomas M. Ball, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 15, 1944, Serial No. 535,657
5 Claims. (Cl. 251—145)

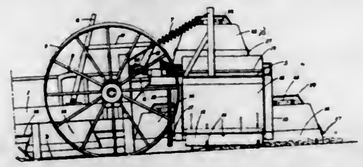


4. A fuel injection nozzle including a tubular body portion having a passage provided with an outlet at one extremity, a shoulder in said passage spaced inwardly from the other extremity thereof, a valve member in said passage including a valve head part for closing said outlet and a stem part including a threaded section at the end portion of said stem part remote from said valve head part, an abutment surface extending outwardly transversely with respect to said stem adjacent the inner end of said threaded section, a spring seat element on said threaded section, a C washer on said stem adjacent said shoulder engageable by said abutment surface and providing a spring seat on said housing, and a spring bearing between said C washer and said spring seat element, said C washer being adapted to engage said abutment surface to hold the portion of said stem carrying said valve head against a displacement from said nozzle body portion in the event of failure of said stem at a location between said abutment surface and the spring seat element.

2,452,284
INJECTION OF BRAKE LININGS
Charles H. Beare, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 11, 1946, Serial No. 640,622
5 Claims. (Cl. 18—47.5)

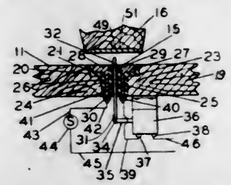
1. The steps in the method of lining the face of the curved metal flange of a brake shoe with a heat-resisting fibrous friction lining bonded to said metal flange, comprising: locating the brake shoe within the mold cavity of a divided mold so that said flange is very rigidly backed up and supported by the mold and forms a non-yielding confining wall for that portion of the mold cavity wherein the lining is to be molded, closing the mold and maintaining the mold closed with a high force sufficient to withstand the internal pressure within the lining cavity, injecting a thermosetting fibrous plastic compound containing a volatile solvent into the lining cavity under a very high pressure of the order of 15,000 lbs. per sq. inch to completely fill and then highly compact said plastic compound within the lining cavity and to cause the thus-molded friction lining to adhere to said curved metal flange when the mold is opened, then opening the divided mold and removing therefrom the thus-formed unit of brake shoe and molded lining, then clamping the molded lining tightly against said curved flange with a follow-up substantially uniformly distributed radial pressure, then heating said molded lining at a moderate temperature below the curing temperature thereof to evaporate said volatile solvent therefrom, and subsequently curing said lining at a curing temperature therefor.

2,452,285
SPACING TABLE
Lowell Crawford Beatty, Hammond, Ind., assignor to Beatty Machine & Manufacturing Company, Hammond, Ind., a corporation of Indiana
Application July 31, 1946, Serial No. 687,297
5 Claims. (Cl. 164—87)



4. A spacing table for cooperation with a machine for performing work on the flanges of an I-beam comprising a series of linearly-spaced support stations each having a pair of fixed vertical spaced supports one of said supports having a rigid support arm provided with a horizontal shaft portion having thereon a roller adapted to engage the underside of the flange of an I-beam adjacent the web thereof, a horizontal I-beam interconnecting said vertical supports, a bearing mounted on said I-beam, a plurality of horizontal beam members interconnecting the supports of said stations, a shaft mounted in said bearing and extending through similar bearings in other stations, a pivoted arm mounted on said shaft and having a horizontal shaft portion supporting thereon a roller adapted to engage the underside of the flange of an I-beam adjacent the other side of the web engaged by said first-mentioned roller, and power-operated means adjacent the ends of said shaft at the penultimate stations for simultaneously actuating the pivoted arms at said support stations.

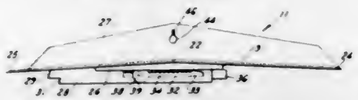
2,452,286
SPRING BAND
Allen Benjamin, Chicago, Ill.
Application January 5, 1946, Serial No. 639,194
2 Claims. (Cl. 63—5)



1. An expansible bracelet comprising a ribbon-like band fashioned from a single strand of material coiled into a continuous succession of closely related elongated loops with the transversely extending reaches of each of said loops being bowed toward each other and connecting tangentially with substantially semi-circular portions to provide a band of less thickness at the longitudinal center than at the edges thereof.

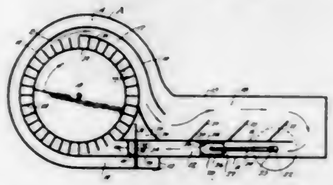
2,452,287
HOT CAP SETTING MACHINE
Paul A. Bezzerides, Orosi, Calif.
Application April 24, 1945, Serial No. 590,018
4 Claims. (Cl. 47—1)

2. A machine for the purpose described comprising a wheel mounted vertically open main frame, a draft element on the main frame by which it may be drawn along the ground, a trailing frame pivoted to the rear of the main frame for relative vertical swinging movement, means for adjusting the vertical position of the trailing frame relative to the main frame, a platform on the trailer frame arranged to support a stack of hot caps having outwardly extending bottom flanges, an operator's station supported on the main frame at a point closely adjacent the platform whereby an operator at such station may grasp and pass a hot cap from the platform to the ground below the frame, and means supported from the trailing frame and operable to deposit soil over the flange of the deposited hot cap as the trailer frame is drawn over the same.



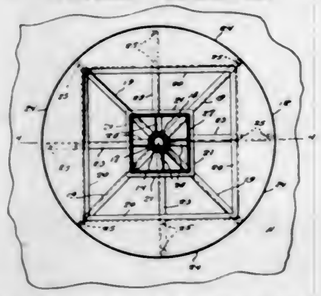
2,452,288
BOWLING SCORE INDICATOR
Thomas R. Blando, Utica, N. Y.
Application October 2, 1945, Serial No. 619,746
1 Claim. (Cl. 177—384)

In combination with a bowling alley, of a score indicator therefor including a plurality of insulated sockets embedded in said alley, spaced semi-cylindrical contact members in each insulated socket, insulated sleeves disposed within said contact members, a switch adjacent each socket having a switch arm connected therewith pivotally supporting a switch pin for vertical and reciprocal movement through said sleeve, a signal box, electric lights therein of a similar number to the number of said sockets, a source of electrical energy, wiring circuits and connections between said contacts, switch, lights and source of electrical energy, each circuit including in series the contact members of a socket, the corresponding switch and the corresponding lamp, and a plurality of contact plate supporting bowling pins adapted to seat on said spaced contact members



to move said switch pin to close the switch adjacent the socket for completing the circuits to said lights for illuminating the same when said bowling pins are in set position.

2,452,289
BRIDGE RAMP
Newall M. Bryson, San Francisco, Calif., assignor to Pallet Engineering Company, San Francisco, Calif., a firm
Application April 2, 1946, Serial No. 658,973
2 Claims. (Cl. 14—72)

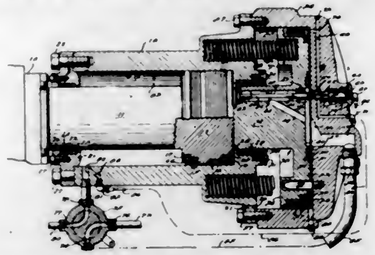


1. A dock board for bridging the gap between two spaced-apart platforms, comprising a ramp having a stop at one end to engage one of said platforms and a vertically depending plate portion adjacent each side edge, said plate portion having a longitudinal slot therein, the upper edge of said slot having ratchet teeth therealong; and a slidable locking bar, one end extending beyond said plate portion for engaging one of said platforms, and the opposite end of said locking bar having an inclined locking member, the lower edge of said locking member slidably supported on the lower edge of said slot and the upper edge of said locking member selectively engaging said ratchet teeth.

2,452,290
HYDRAULIC TORQUE CONVERSION APPARATUS
Douglas L. Butow, Evanston, Ill.
Application November 2, 1945, Serial No. 626,296
3 Claims. (Cl. 60—54)

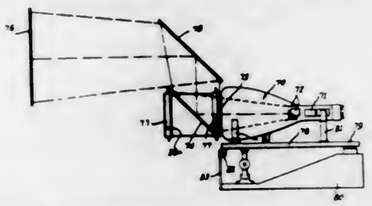
2. In hydraulic torque conversion apparatus, a casing providing a piston conduit, a rotor chamber communicating therewith, a reservoir chamber connecting said rotor chamber and the inlet side of said conduit, a piston mounted for reciprocation in said conduit and having a passage therethrough, a check valve controlling said passage through said piston, means for reciprocating said piston, said valve allowing liquid to flow through said piston when the same is moved rearwardly and preventing flow therethrough when said piston is advanced, a check valve in said conduit between said piston and rotor chamber and allowing liquid to pass toward said chamber but preventing flow from said rotor chamber toward said piston and vanes extending upwardly and rearwardly in said reservoir chamber permitting the flow of liquid from said rotor chamber toward the rear end of said piston conduit but impeding the flow of liquid in the opposite direction when said piston is moved rearwardly.

2,452,291
REVOLVING CARD FILE AND POSTING TABLE
Joe D. Catron, Rosenberg, Tex.
Application May 31, 1946, Serial No. 673,370
4 Claims. (Cl. 311—33)



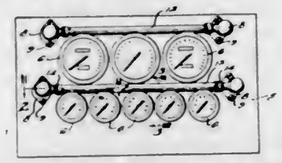
1. The combination of a posting table having a circular cut-out in its top and a turn-table rotatably arranged in the cut out, a support member fastened to the table frame and extending diametrically to and underneath the circular cut-out, an upwardly extending axle rigidly mounted on and supported by the support member and arranged concentrically with the cut-out, and a frame rotatably supported by the axle and supporting the turn table, said frame comprising a hollow cylindrical hub rotatably supported by the axle, four angle irons rigidly connected with the hub and extending radially therefrom and arranged at right angles to each other, one leg of each angle iron extending downwardly, and the top surfaces of the other legs being located in the same plane with the underside of the table top, an outer square consisting of four angle irons firmly mounted on the first mentioned angle irons so that the latter extend diagonally to the outer square and somewhat beyond the corners of the square and an inner square formed by four angle irons firmly attached to the diagonal angle irons and arranged parallel to the angle irons of the outer square, the angle irons of the two squares being positioned so that one leg of each angle extends upwardly and that the other legs of each pair of parallel angle irons extend toward each other and are adapted to support a drawer of a filing cabinet, the upper edges of the upwardly extending legs of the angles of the two squares being located at the same level as the upper surface of the table top.

2,452,292
PRESSURE INTENSIFIER
Walter P. Cousino, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application August 25, 1944, Serial No. 551,191
10 Claims. (Cl. 60—54.5)



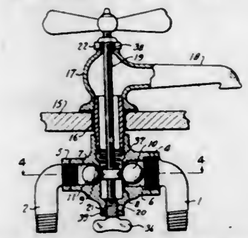
10. In combination, a first piston having a pressure-receiving area, a second piston having one end provided with a first pressure-receiving area smaller than and opposed to the pressure-receiving area of the first piston, means slidably mounting the first piston and forming an enclosed space between the area of the first piston and the first area of the second piston, means slidably mounting the second piston and enclosing a space between itself and a second pressure-receiving area at the opposite end of the second piston, the second piston having a through passage extending between the aforementioned ends thereof, means for supplying fluid under pressure

through the passage in the second piston and into the space betwen the pistons for shifting the first piston, means for thereafter closing the passage in the second piston to lock fluid in the space between the pistons, and means for thereafter



supplying fluid under pressure against the second pressure-receiving area of the second piston for shifting the second piston and applying pressure against the second piston through compression of the fluid between the pistons.

2,452,293
COLOR TELEVISION SYSTEM
Lee de Forest, Los Angeles, Calif.
Application January 15, 1945, Serial No. 572,863
9 Claims. (Cl. 178—5.4)

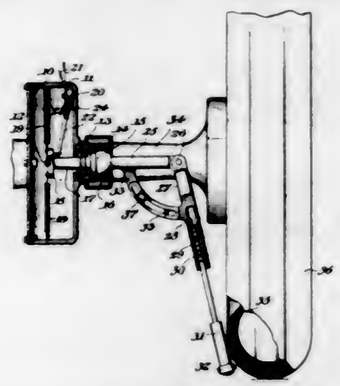


1. In a color television system which includes a cathode beam tube having means for generating a cathode beam and having means for moving the beam along parallel paths, the combination of: a movable filter disposed adjacent the cathode beam tube, said filter comprising a plurality of sequentially arranged stripes of different colors, said stripes being perpendicular to the direction of movement of the cathode beam; and means for moving said filter at a uniform speed in a direction perpendicular to said stripes.

2,452,294
INSTRUMENT LIGHTING
John B. Dickson, Highland Park, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application July 16, 1945, Serial No. 605,202
2 Claims. (Cl. 240—8.16)

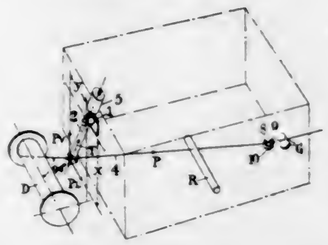
1. In a panel including a plurality of dial faces to be illuminated, a source of light mounted on said panel, a housing for said source having an opening, a sleeve carried by said housing in registration with said opening, a transparent rod arranged lengthwise in juxtaposed relation to said dial faces and having one end thereof disposed at said casing opening to receive light rays from said source and supported in said sleeve, said rod having an external surface for optically transmitting light rays from said one rod end toward the other end by internal reflection thereof, a coating of paint in optical contact with selected portions of said rod surface respectively registering with said dial faces operable to effect reflection of light rays externally of said rod at locations thereof opposite said painted surface portions, and a light impervious casing for said rod having an end portion telescoping said sleeve for support thereby and having openings therein at said locations for the passage of externally reflected light rays, and otherwise constituting a shield for said rod throughout the length thereof including said coated surfaces.

2,452,295
FAUCET
George S. Elliott, Detroit, Mich.
Application October 10, 1947, Serial No. 779,107
3 Claims. (Cl. 277—20)



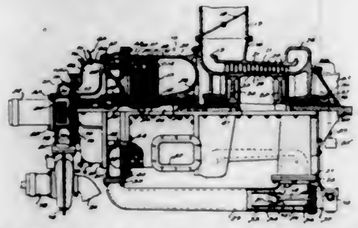
1. A mixing type valve for hot and cold water control comprising, a body having a substantially central chamber therein, two substantially oppositely disposed valve chambers in the body for connection to hot and cold water supply pipes, said valve chambers opening into the central chamber, a valve member in each valve chamber, a seat in each valve chamber upon which the valve members seat to close the chambers, outlet means leading from the chamber, an operating stem journalled near one end and having an accessible operating stem, said stem extending through the chamber, a cam construction on the stem at the location of the valve members having two substantially opposite lobes and a single lobe positioned substantially midway between the two opposite lobes, dwell portions between the lobes, said lobes being operable on the valve members to displace the valve members from their seats, the dwells being inoperable on the valve members, whereby both valves may be opened by the opposite lobes and one valve opened by said one lobe, and adjustable means for piloting the end of the stem opposite the journalled end and operable to adjustably shift the piloted end of the valve stem between the two valve chambers whereby the degree of opening of the two valve members relative to each other may be varied.

2,452,296
PRESSURE INDICATOR
Wallace Vernard Eslinger and William Nathaniel Barton, Arlington, Va.; said Wallace Vernard Eslinger assignor to Genevieve B. Eslinger, Falls Church, Va.
Application August 22, 1944, Serial No. 550,658
3 Claims. (Cl. 200—58)



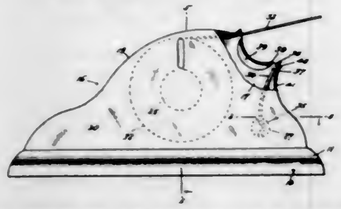
1. In a wheeled vehicle having pneumatic tires, a tire deflation indicator comprising a deflation

response unit adapted to be mounted on said vehicle adjacent one of its wheels, said unit comprising tire contacting means normally positioned to be engaged by the inner side wall of the tire on said wheel when under-inflated at an area adjacent the point of traction between said tire and the ground, primary supporting means holding said contacting means for resilient limited axial movement in one plane, secondary supporting



means holding said primary supporting means for resilient limited movement in other planes, a switch arm arranged in operating engagement with said secondary supporting means and normally held in neutral position, whereby any movement of said secondary means out of its normal position caused by tire deflation will move said switch arm out of its neutral position and into an indicating circuit closing position.

2,452,297
WINCH AND THE LIKE
Felix Gaye, Broadmoor, near Dorking, England
Application March 21, 1945, Serial No. 583,891
In Great Britain June 10, 1944
5 Claims. (Cl. 242—158)

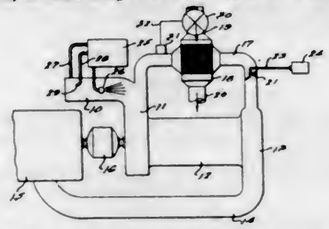


1. Paying-on gear for winding apparatus of the kind referred to comprising a horizontally disposed winding member, a tensioner for the cable, a member between said winding member and said tensioner pivoted at a point above the winding member so as to be freely swingable in the manner of a pendulum in a plane substantially parallel to the axis of said winding member, and means on the lower end of said pivoted pendulum member and situated at a point lower than the winding member to engage the cable throughout the winding operation.

2,452,298
STARTER
Gilbert C. Goode, Birmingham, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application October 20, 1944, Serial No. 559,644
3 Claims. (Cl. 60—41)

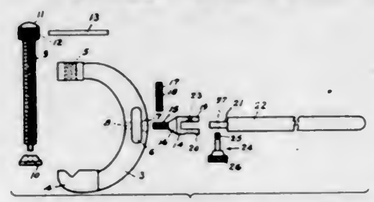
3. A starter for a gas turbine of the continuous flow type comprising a rotatable impeller and a continuously operating burner for continuously producing gas to be directed continuously against the impeller to maintain the same in a certain speed range, the starter comprising a motor secured to the shaft for initiating rotation of the shaft and impeller and bringing them to an intermediate speed below the certain speed range, and a burner of the combustion chamber type for supplying gaseous products of combustion to the impeller to bring it from the intermediate speed to the certain speed range.

2,452,299
TAPE DISPENSER
Howard C. Gould, Brooklyn, N. Y.
Application November 8, 1945, Serial No. 627,444
10 Claims. (Cl. 164—84.5)



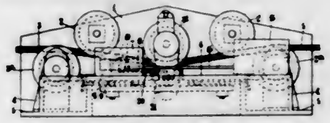
1. A dispenser for strip material including a case, means within the case for supporting for rotation, a supply of strip material, said case having an opening through which the strip material may be fed, a cutter extending through a slot in the case and spring-pressed against one side thereof away from the supply and adapted to be moved against the other side of the slot when the strip material is fed out and pressed against the projecting edge of the cutter in a direction toward the supply, whereby when the strip is severed, the cutter immediately returns to its initial position to disengage itself from the projecting unsevered end portion of the strip material.

2,452,300
SUPERCHARGER
Alexander G. Herreshoff, Grosse Pointe, and Allen C. Staley, Birmingham, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application April 13, 1944, Serial No. 530,930
9 Claims. (Cl. 123—119)



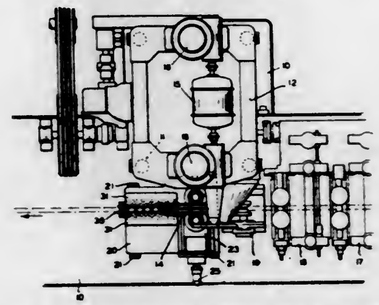
1. In combination, a supercharger, an inlet line leading to the supercharger, an engine, a delivery

line leading from the supercharger to the engine, means for introducing fuel for the engine in the inlet line, means responsive to rate of flow of air



in the inlet line for controlling the fuel-introducing means, a by-pass for the supercharger leading from the delivery line to the inlet line, and cooling means associated with the by-pass.

2,452,301
DIAL TEST INDICATOR CLAMP
Millard E. Hester, Seattle, Wash.
Application August 8, 1945, Serial No. 609,673
4 Claims. (Cl. 248—226)



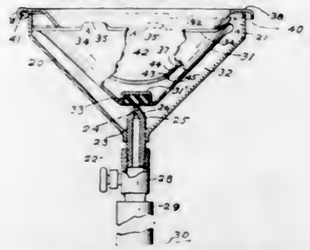
1. A dial test indicator clamp comprising a C clamp; a post rotatively connected with the frame member of the C clamp and intermediate the ends thereof; adjustable locking means securing said post to said C clamp; a dial indicator supporting beam hinged to said post; and adjustable locking means securing said beam to said post.

2,452,302
CABLE TENSIOMETER
Herbert Hitchen, Doncaster, England, assignor to British Ropes Limited, Doncaster, England
Application November 13, 1944, Serial No. 563,228
In Great Britain July 16, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 16, 1963
1 Claim. (Cl. 73—144)

A cable tensiometer comprising a frame, a resilient bar rigidly secured at each of its ends to the frame, two pulleys mounted on the frame for rotation about spaced parallel axes, a member engaging the bar intermediate its length, bearings in the member, a third pulley mounted in said bearings for rotation about an axis between and parallel to said axes, the lower peripheral portion of said third pulley being below the lower peripheral portions of the said two pulleys, two additional pulleys mounted on the frame for rotation about axes parallel to said previously recited axes, all of said pulleys lying in a common plane, said two additional pulleys being positioned respectively outwardly of said two pulleys and with their upper peripheral portions above the lower peripheral portions of said two pulleys whereby a tensioned cable passing over the said two additional pulleys is maintained in contact with the lower peripheral portions of the three first mentioned pulleys and means for indicating the deflection of said resilient bar.

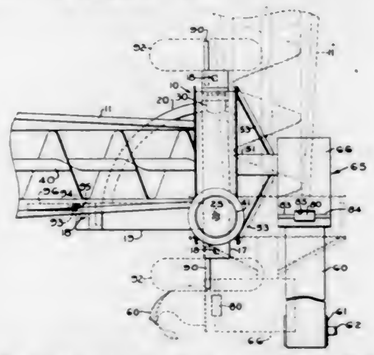
2,452,303
MULTIPLE WELDING PRESSURE ROLL ASSEMBLY FOR ELECTRIC WELD TUBE MILLS
Carl J. Honen, Youngstown, Ohio, assignor to The McKay Machine Company, Youngstown, Ohio, a corporation of Ohio
Application December 18, 1947, Serial No. 792,471
8 Claims. (Cl. 219—6)

1. In a continuous butt-weld tube mill having a welding station comprising a base and a pair of rotary electrodes for engaging the stock on opposite sides of the cleft to be welded the combination of a multiple pressure roll assembly comprising a base adapted to be detachably secured to said first mentioned base below said rotary electrodes, a pair of pressure rolls journaled on said second mentioned base for rotation about spaced axes positioned on opposite sides of the cleft being welded, said pair of rolls engaging the tube in a transverse plane closely adjacent the points of contact of said electrodes with said tube, a pair of spaced parallel outwardly extending ways on said second mentioned base, an elongated bar mounting a plurality of closely spaced pressure rolls slideably received in each of said ways for lateral movement toward and away from each other, and means for adjustably and yieldably urging said bars toward each other whereby the rolls carried thereby will apply compressive pressure to said tube on opposite sides of the welded cleft thereof.



2,452,304
PHONOGRAPH NEEDLE
William H. Hutter, Wheaton, Ill.
Application August 19, 1947, Serial No. 769,476
8 Claims. (Cl. 274—38)

1. A phonograph needle comprising a stylus portion, a chuck engaging portion, and a portion connecting said stylus portion and said chuck engaging portion, said connecting portion being



formed from nylon having substantially the same physical characteristics as FM10001 nylon and being of a length of at least one eighth of the total length of the needle.

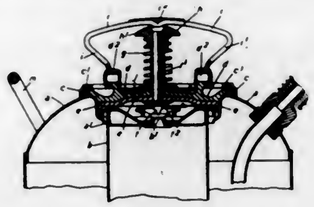
2,452,305
DRINKING FOUNTAIN
Earl B. Johnson, Freehold, N. J.
Application October 10, 1944, Serial No. 557,987
24 Claims. (Cl. 119—81)

1. In combination, an upwardly open container having an upper edge portion; a reservoir disposed in the container for up and down movement and providing a water space between said reservoir and container and having a substantial margin disposable within and lower than said upper edge portion; said reservoir preventing flow of water from the container into the reservoir except at the upper part thereof; said reservoir being of a shape and weight to be buoyed by water in the container when less than a predetermined small amount of water is in the reservoir, and to sink in the water when the reservoir receives a predetermined larger amount of water from the container; water supply means for the container controlled by the rise and fall of the reservoir; and a cover mounted on the container disposed over the reservoir and said space to prevent undesired material from falling into the reservoir and said space and comprising a bowl-shaped part in and spaced from the reservoir, said bowl-shaped part being provided near its bottom with an opening communicating with the reservoir.

2,452,306
POWER BELT RETAINING DEVICE
Frank D. Jones and Leo G. Cheatum, Ottumwa, Iowa, assignors to Deere Manufacturing Co., a corporation of Iowa
Application May 26, 1947, Serial No. 750,488
11 Claims. (Cl. 74—242.5)

1. In combination with a pulley and a flexible power transmitting element trained thereover, a retaining device for holding said element on said pulley comprising a U-shaped clamping member adapted to straddle said pulley and element thereon, and means for urging said member into clamping engagement.

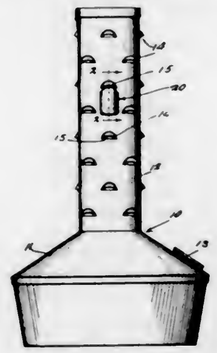
2,452,307
MUSICAL KEY CONTROL
James A. Koehl, Evanston, Ill., assignor to Central Commercial Company, Chicago, Ill., a corporation of Illinois
Application March 20, 1946, Serial No. 655,649
7 Claims. (Cl. 201—55)



1. An electric switch comprising a variable resistance adapted to be connected in a shunt path across a signal transmission channel; a plurality of fixed contact elements electrically insulated from each other and connected with said resistance in such manner that each individual contact element denotes a predetermined value of resistance in said shunt path; a rocker of conductive material a plurality of movably mounted contact elements mounted on said rocker and disposed for electrical coaction with respective ones of said fixed contact elements; said rocker having a springy portion tending to urge to a position of electrical engagement the second named contact elements with their respective fixed contact elements a common ground for said movably mounted elements and means actuable from a control key for sequentially engaging said movably mounted elements with and similarly, sequentially disengaging same from said fixed elements.

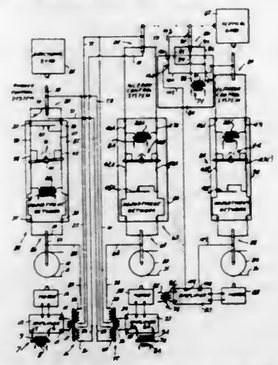
2,452,308
PROCESS OF PLATING PALLADIUM AND PLATING BATH THEREFOR
George C. Lambros, New York, N. Y.
No Drawing. Application February 28, 1946, Serial No. 651,041
5 Claims. (Cl. 204—47)

2. A process of electrodepositing palladium which comprises dissolving freshly precipitated dichlorodiamine palladium in an aqueous solution of cyanide of the group consisting of sodium cyanide and potassium cyanide, said solution containing cyanide in an amount ranging from 0.63 to 0.69 gram of cyanide (CN) per gram of palladium in the form of dichlorodiamine palladium, and from 0.5 to 15 grams of palladium metal per liter, and electrolysing said solution in the presence of said cyanide at a temperature of about 90° C., and replenishing the solution periodically to maintain the palladium content of the solution from 0.5 to 15 grams of metal per liter.



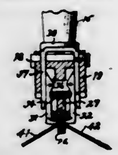
2,452,309
PORTABLE FIRE EXTINGUISHER
Harold C. Leech and Thomas A. Henshaw, Elland, England
Application December 9, 1944, Serial No. 567,373
In Great Britain December 9, 1943
2 Claims. (Cl. 169—31)

1. A closure for fire extinguishers which are characterized by an outer container having a charging opening for liquid and an inner container for a propellant gas or for a liquid capable of combining with that in the outer container to generate a propellant gas, said closure comprising a cover plate adapted to seal the charging opening in the outer container having radial projections extending from said cover plate, an outer container-carried ring surrounding the said charging opening, said ring having an interrupted flange with which the projections on the said cover plate are adapted to co-operate to hold the cover plate in position, a handle pivoted to the outer side of the cover plate, a central projection on said handle, a longitudinally-slidable



piercer member adapted to release the contents of the inner container, a spring acting to hold the piercer member in inoperative position, an operating knob to enable the piercer member to be moved against the action of the spring, and a depression in the outer face of said knob with which the projection on the handle is adapted, when the latter is in raised position, to engage and depress the piercer member slightly against the action of the spring, so that the handle is held in engagement with the knob and accidental operation of the piercer member thus prevented.

2,452,310
HEATER STARTING AND LIGHTING DEVICE
James Gibson Lindsay, San Dimas, Calif., assignor to Fay C. Marchant, San Dimas, Calif.
Application August 30, 1944, Serial No. 551,881
1 Claim. (Cl. 158—91)



In an ignition device an orchard heater having a cylindrical upright stack and provided with draft louvres therein, a cup-like receptacle having a concave side adapted to conform to the radius of curvature of said stack, an extending tongue affixed to an upper portion of said receptacle and mounted on one of said draft louvres to support the cup on the side of the heater stack, and an upwardly extending portion of said receptacle forming a windshield opposite said tongue and adapted to extend substantially to said one of said louvres and shield the same.

2,452,311
ELECTRIC MOTOR CONTROL APPARATUS
David L. Markusen, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application February 8, 1943, Serial No. 475,113
5 Claims. (Cl. 318—29)

5. An electrical control apparatus which includes first and second motors to be operated; first and second control means connected to said first and second motors respectively, for operation thereof; a plurality of adjustable control networks each having a plurality of pairs of output connections the polarity across each pair of connections in any half cycle depending on the adjustment of said networks; a first transformer having a secondary winding connected to said first control means, a first primary winding connected across a pair of output connections of one network, and a second primary winding connected across a pair of output connections of a second network; a second transformer having a secondary winding connected to said second control means, a first primary winding connected across another pair of connections of said first network, and a second primary connected across another pair of connections of the second network.

2,452,312
SEAM OPENING DEVICE
Ray H. McMurray, Oakland, Calif.
Application June 15, 1946, Serial No. 676,995
8 Claims. (Cl. 164—47)

1. In a seam opening device of the character described, the combination of a blade supporting means, a thread cutting blade mounted upon said blade supporting means against which the threads of a stitched seam may be moved, an anvil-like member carried by said supporting means over which a seam to be opened may be moved toward said blade, said anvil-like member having a relatively thin seam thread supporting edge extending in co-planer relation with the cutting edge of said blade, an overhanging projection likewise extending outwardly from said blade supporting means and in spaced relation to said anvil-like member under which a seam to be opened may pass, and a blade-like seam spreading guide mounted upon

said overhanging projection in spaced relation to said anvil-like member, the spacing between said seam spreading guide and said anvil-like member approximating the dimension of the threads of the seam stitching, whereby the goods at said seam will be prevented from engaging said thread cutting blade.

2,452,313
PLASTICIZED PROLAMINE-BASE PROTEIN COMPOSITIONS

Willard L. Morgan, Columbus, and Carl R. Faelten, Clinton Township, Franklin County, Ohio, assignors, by direct and mesne assignments, to American Maize-Products Company, a corporation of Maine

No Drawing. Application March 5, 1945, Serial No. 581,188
19 Claims. (Cl. 106—153)

1. A plasticized "prolamine-base" protein composition comprising plasticized "prolamine-base" protein having as plasticizer organic carboxylic amide substituted on the nitrogen atom with at least one alkyl radical containing an amine radical selected from the group consisting of —NH_2 and =NH.

2,452,314
PLASTICIZED PROLAMINE-BASE PROTEIN COMPOSITIONS

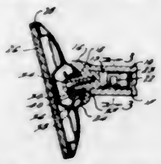
Willard L. Morgan, Columbus, Ohio, assignor, by direct and mesne assignments, to American Maize-Products Company, a corporation of Maine

No Drawing. Application March 5, 1945, Serial No. 581,190
24 Claims. (Cl. 106—153)

1. A plasticized "prolamine-base" protein composition comprising plasticized "prolamine-base" protein having as plasticizer therefor ether phenol in which the total number of carbon atoms in the molecule is not in excess of 18.

2,452,315
PLASTICIZED PROLAMINE-BASE PROTEIN COMPOSITIONS

Willard L. Morgan, Columbus, and Carl R. Faelten, Clinton Township, Franklin County, Ohio, assignors, by direct and mesne assignments, to American Maize-Products Company, a corporation of Maine



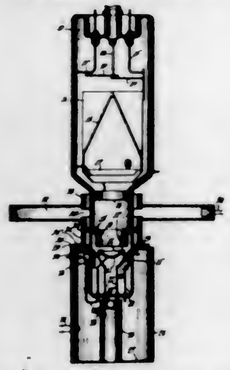
No Drawing. Application April 9, 1945, Serial No. 587,436
23 Claims. (Cl. 106—153)

1. A plasticized "prolamine-base" protein composition comprising plasticized "prolamine-base" protein having as plasticizer cyclic imide in which the total number of carbon atoms in the molecule is in the range from 4 through 14.

2,452,316
ADJUSTABLE SUPPORT

Charles E. Morley, Detroit, Mich.

Application February 12, 1948, Serial No. 7,822
9 Claims. (Cl. 248—205)

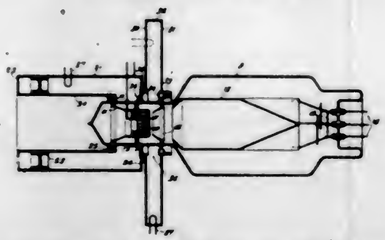


1. Adjustable supporting means of the ball and socket type comprising in combination with a supporting element, a socketed member having a generally spherical socket therein rotatably secured to said element for bodily rotation about a predetermined axis, said socket being angularly tilted with respect to said axis, and a coacting partly spherical ball portion slidably interfitted with said socket for rocking and rotary adjustment with relation to said socketed member and for bodily rotation therewith.

2,452,317
ELECTRON DISCHARGE DEVICE EMPLOYING CAVITY RESONATORS

Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application December 14, 1943, Serial No. 514,206
8 Claims. (Cl. 315—5)



1. An electron discharge device having a cathode electrode, grid electrode and another electrode aligned in the order named, said cathode electrode having lead and support conductors, said grid electrode having lead and support conductors extending across but out of contact with the cathode conductors, a cavity resonator coupled between the grid conductors and cathode conductors on the opposite side of the crossed-over portions from said grid electrode and cathode electrode.

2,452,318
ELECTRON DISCHARGE DEVICE UTILIZING CAVITY RESONATORS

Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application March 27, 1944, Serial No. 528,195
7 Claims. (Cl. 315—6)

1. An electron discharge device having an envelope containing a cathode, a hollow grid assembly and another electrode, all in order named, said grid assembly including a collar member, said cathode being insulatingly supported solely from said grid assembly and enclosed entirely within said grid assembly, conducting means connected to said collar member, conducting means connected to said cathode and extending through said grid assembly but out of contact therewith, and a cavity resonator coupled between both said conducting means.

2,452,319
RUST AND OXIDATION INHIBITED LUBRICATING COMPOSITIONS

John A. Patterson and Herman D. Kluge, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

No Drawing. Application December 8, 1943, Serial No. 513,466
4 Claims. (Cl. 252—49.6)

1. A lubricating oil composition having superior anti-oxidant and anti-rusting properties in the presence of water comprising as essential ingredients a hydrocarbon oil possessing lubricating properties and having incorporated therein about 0.01–5.0% by weight, on the basis of the lubricating composition, of an alkyl substituted diamino diphenyl methane, about 0.005–3.0% by weight of an oil-miscible dicarboxylic acid having at least 10 carbon atoms in the molecule and a plane symmetrical configuration, and about 0.0001–2.5% by weight of an oil-miscible alkyl acid phosphate containing at least 10 carbon atoms in the alkyl portion thereof.

2,452,320
OXIDATION-INHIBITED LUBRICATING COMPOSITIONS

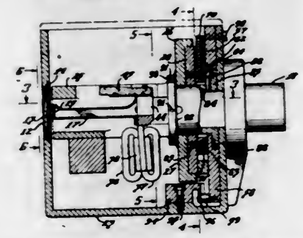
Herman D. Kluge and John A. Patterson, Wappingers Falls, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

No Drawing. Application November 30, 1945, Serial No. 632,106. In Canada December 2, 1944
7 Claims. (Cl. 252—51.5)

1. A lubricating composition having superior anti-oxidant properties in the presence of water comprising a mineral lubricating oil as the major constituent, about 0.005–3.0% by weight of an oil-miscible alkyl maleic acid having at least 10 carbon atoms in the molecule, and about 0.01–5.0% by weight of an alkyl substituted diamino diphenyl alkane, wherein the said alkyl substituent contains from 1 to 5 carbon atoms and the said alkane is selected from the group consisting of methane and ethane.

2,452,321
RUST PREVENTIVE COMPOSITION

Herman D. Kluge, Wappingers Falls, and John A. Patterson, Newburgh, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware



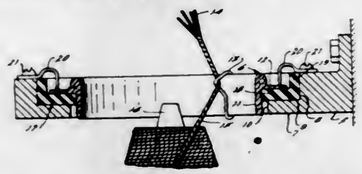
No Drawing. Original application November 5, 1943, Serial No. 509,122. Divided and this application July 18, 1947, Serial No. 762,008
8 Claims. (Cl. 148—6.15)

1. A method of preventing rust formation of metal surfaces in the presence of salt water which comprises applying to metal surfaces an oleaginous vehicle having incorporated therein a combination of 0.01–3.0% by weight of an oil-miscible dicarboxylic acid containing at least 10 carbon atoms in which the carboxyl groups are in a plane symmetrical configuration, and 0.0001–5.0% by weight of an alkyl acid phosphate in which the alkyl portions thereof contain a total of at least 10 carbon atoms.

2,452,322
LIGHT MODULATOR MOUNT

James Lawrence Pettus, Sherman Oaks, Calif., assignor to Radio Corporation of America, a corporation of Delaware

Application April 4, 1947, Serial No. 739,484
7 Claims. (Cl. 88—61)



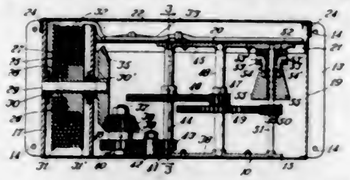
1. A light modulator and mount therefor comprising a motor element, a light modulating element vibratable by said motor element, a frame for supporting said elements in an optical system, and a mounting means for said frame, said means including transversely adjustable plates and a rotatable ring for adjusting said light modulating element in transverse directions at right angles to one another and rotationally.

2,452,323
SPINNING RING

George E. Platzer, Springfield, Mass., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Application December 27, 1947, Serial No. 794,139
6 Claims. (Cl. 57—120)

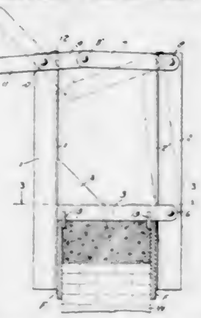
1. In combination, a spinner ring of the type adapted to support a traveler for revolving movement thereabout and formed from a mass of sintered powdered metal having a porosity sufficient to transmit liquid lubricant by capillary action, said ring including an annular main body adapted to be engaged by the traveler during its revolving movement and a radially outwardly directed flange adapted to receive lubricant at one face thereof and transmit the same by capillary action to said main body, a support for the ring, and a seal engaged with said support and with the other face of said flange for preventing access of the liquid lubricant received by said flange to said support.



2,452,324
FIRE ESCAPE

Francis Edward Rose, Drexel Hill, Pa.

Application November 24, 1947, Serial No. 787,703
6 Claims. (Cl. 254—151)

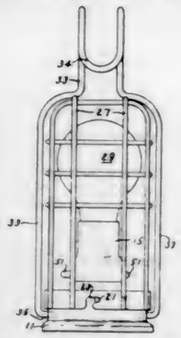


1. A fire escape device adapted to safely lower persons from the upper floors of buildings to the ground, comprising drum means mounted for rotation and having a stepped core of at least two different diameters, cable means secured to said core and adapted to be coupled at its free end to the person to be lowered, said cable being wound

in progressive layers about the smaller diameter portion of said core forming a coil of the diameter of said larger diameter portion of said core and then wound by layers over the total length of

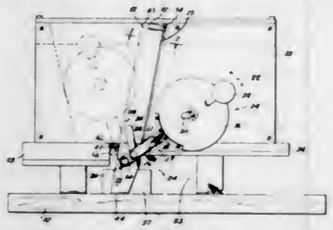
said core forming a coil surrounding and contiguous with said first mentioned coil, and means operative to maintain the speed of rotation of said drum means substantially constant.

2,452,325
FORM-SECURING CLAMP
Robert F. Rosser, Miami, Fla.
Application May 10, 1946, Serial No. 668,714
1 Claim. (Cl. 25—131)



Form clamp for concrete work comprising two struts of T cross section, the heads of said struts constituting bearing faces, an arm projecting perpendicularly from the bearing face of one strut intermediate its ends, the second strut having a portion of its head intermediate its ends cut away, spaced lugs secured on the arm and projecting below the edge thereof, to constitute form-engaging members, a pivotal connection between the end of the arm and the web of the second strut, and two pivoted toggle levers, the end of one of said toggle levers pivoted to the end of one strut and the other toggle lever pivoted intermediate its ends to the end of the other strut.

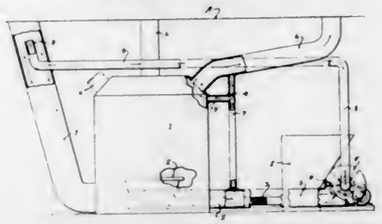
2,452,326
CONTROLLED OXIDATION OF PARAFFINIC HYDROCARBONS
Frederick F. Rust and William E. Vaughan, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 30, 1943, Serial No. 474,220
8 Claims. (Cl. 260—533)



8. In a process for the production of oxygenated organic compounds, the steps of subjecting a saturated aliphatic hydrocarbon containing two to five carbon atoms per molecule to the action of oxygen in the presence of hydrogen bromide, and effecting the reaction at a temperature between about 100° C. and the temperature at which spontaneous combustion and the resultant decomposition of the hydrocarbon will occur.

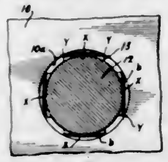
2,452,327
MULTIPURPOSE LIGHT
Robert T. Sand, Detroit, Mich., assignor of forty per cent to Frederick T. Hicks, Detroit, Mich.
Application July 2, 1945, Serial No. 602,709
3 Claims. (Cl. 240—11.2)

1. A multi-purpose light comprising, a base dished to constitute a reflector and to contain an electric light socket and having outwardly exposed sidewalls, a lamp guard cage having a top portion and having a lower portion adapted to clamp around the sidewalls of said base for protecting a lamp in the socket, and means to lock the cage to the base comprising a handle bail having bottom ends pivotally mounted in the base and straight sides with a top portion having shoulders, the bail being swingable to bring the shoulders into snug engagement with the top of the cage.



2,452,328
FOOD CUTTING UTENSIL
Karl Schatz, Peekskill, N. Y.
Application January 9, 1946, Serial No. 639,939
9 Claims. (Cl. 146—169)

8. In a food cutting utensil in combination a base; a flat body member mounted on said base and provided with two flat faces and a slot; a cutting blade mounted in said slot; a turnable food holder for holding the food during cutting; first pivot means turnably securing said food holder to said body member so that said food holder is adapted to move to and fro in a turning plane being parallel to and at a slight distance from one of said flat faces of said body member; a food holding member forming part of said food holder; second pivot means forming also part of said food holder and constructed and arranged so as to enable tilting of said food holding member about an axis being parallel to said turning plane of said food holder, thus enabling tilting of said food holding member away from said flat body member; a tiltable receiving plate mounted adjacent to the other face of said flat body member in such a manner as to be adapted to receive



the cut food; and motion transmitting means connecting said turnable food holder adjacent to one of said flat faces of said flat body member with said receiving plate adjacent to the other of said flat faces of said flat body member in such a manner as to be adapted to tilt said receiving plate towards said flat body member once each time said food holder is moved in said turning plane past said cutting blade.

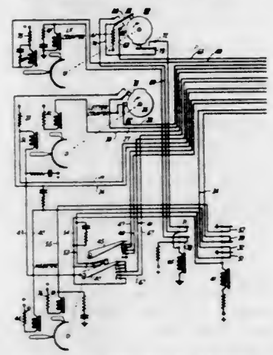
2,452,329
STOKER CONTROLLED HEATING SYSTEM
Otto R. Schwantes, Milwaukee, Wis.
Application September 16, 1946, Serial No. 697,219
1 Claim. (Cl. 237—53)

In a hot air compartment heating system having a furnace including an air intake duct communicating with the bottom of the furnace, hot air compartment flues of different lengths communicating with the furnace dome, a fuel stoker associated with the furnace fire pot having a fan, an air supply pipe communicating with the fan and fire pot of the furnace; the combination of an air forced feed for certain of the hot air compartment flues, comprising a restricted forced feed air pipe connecting the stoker air supply pipe and one or more of the lazy compartment flues adjacent the furnace dome, a branch pipe connecting the restricted forced feed pipe and furnace dome and a valve in said forced feed pipe for selectively directing air from the restricted forced feed pipe to the dome or to a lazy hot air flue, whereby an auxiliary current of hot air is discharged from the lazy pipe flue mouth.

2,452,330
FASTENER
Winsor Shippee and Carl C. Shippee, Fair Haven, N. J.
Application January 1, 1945, Serial No. 570,865
6 Claims. (Cl. 85—5)

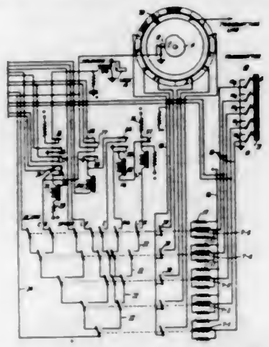
2. A fastener for use in a circular hole comprising a member having a base, four upstanding longitudinally-bowed band-like legs on said base, said legs defining a socket of square cross section substantially as long as said legs and being of sufficient width to form leaf-spring chords in the hole with the free edges only of the legs engaging the periphery of said aperture, said socket being adapted to be expanded outwardly by insertion of a pin therein of a size producing transverse bowing of the leaf-spring chords into gripping engagement with the circular hole.

2,452,331
FASTENER
Winsor Shippee, Fair Haven, N. J.
Application January 1, 1945, Serial No. 570,866
4 Claims. (Cl. 24—73)



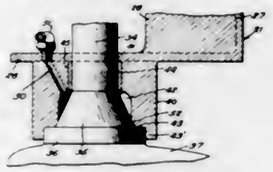
1. A fastener comprising a one-piece metal member having a split circular head portion composed of a plurality of pieces but defining a substantially complete circumference, a plurality of legs joining the split head pieces and projecting from the central part of said head to form a stem on the member, said head having a depending peripheral skirt with an inturned edge providing a locking shoulder, and each leg being in the form of a flat ribbon with a locking shoulder opposing said edge of the skirt to cooperate therewith in attaching the member.

2,452,332
NAIL HOLDING TOOL
Paul Siptrott, New York, N. Y.
Application December 12, 1947, Serial No. 791,215
3 Claims. (Cl. 1—47)



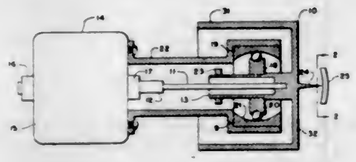
1. A nail holding tool comprising two members, having curved portions to form a handle-grip, slightly bent and tapered sections contiguous to the latter, said sections terminate in flat end portions, horizontal relative to said tapered portions, and being formed with graduated apertures therein, and a spring fixedly connecting the two members together.

2,452,333
TELEGRAPHIC CODE TRANSMITTER
James A. Spencer, Teaneck, N. J., and Claude L. Kennedy, Patchogue, and Lewis A. Thomas, Brooklyn, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application February 11, 1947, Serial No. 727,880
3 Claims. (Cl. 178—3)



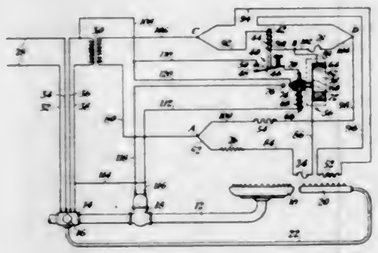
1. In a telegraph printing system utilizing a fixed unit signal code, a tape transmitter having a distributor, a relay for each unit of said code connected so as to establish a potential on an

element of said distributor when energized, means energizing said relays in accordance with the signal characters to be transmitted by said transmitter, means counting the signal characters transmitted, means operated by said counting means interrupting the transmission of said signal characters after the transmission of a predetermined number of said signal characters, means operated by said counting means energizing said relays during said interruption in accordance with function performing characters not appearing in said signal characters whereby said distributor transmits said function performing characters during said interruption and means operated by said counting means reestablishing the transmission of said signal characters after the transmission of said function performing characters.



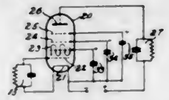
2,452,334
RUDDER ASSEMBLY
Theodore Sprague, IV, New Orleans, La., assignor to Andrew J. Higgins, New Orleans, La.
Application November 23, 1945, Serial No. 630,159
7 Claims. (Cl. 114—169)

1. A rudder assembly comprising a bracket having bearings thereon, a rudder stock mounted in the bearings, one of the bearings being in the form of a sleeve depending from said bracket, said stock having a frusto-conical portion in the sleeve, said sleeve adjacent the frusto-conical portion being hollowed out to form an annular chamber for lubricant, and a flange on the stock at the base of the conical portion, the sleeve having a shouldered recess neatly fitting said flange.



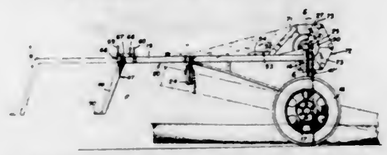
2,452,335
TWO-AXIS RATE GYRO
George H. Stoner, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application December 26, 1945, Serial No. 637,277
5 Claims. (Cl. 33—204)

5. A rate gyro comprising a driving means including a housing and a shaft journaled therein, a gyro wheel mounted on said housing for free rotation about any axis within a cone of freedom about the axis of the shaft, and a resilient rod connecting the gyro wheel with the shaft, whereby



deflection of the spin axis of the gyro wheel with respect to said shaft is resiliently restrained and said deflection is an indication of the angular rotation rate of the housing about any axis perpendicular to the shaft.

2,452,336
SAFETY CONTROL AND IGNITION SYSTEM FOR FUEL BURNERS
Charles K. Strobel, Pittsburgh, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application April 19, 1947, Serial No. 742,522
7 Claims. (Cl. 158—117.1)

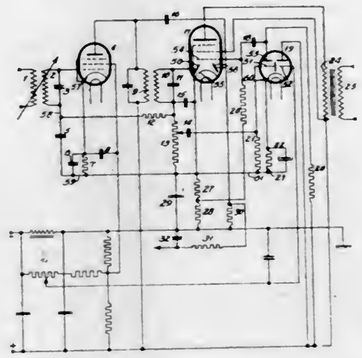


4. Safety control apparatus for fuel burners having main and pilot burners, comprising the combination with an electrical bridge circuit including a control relay having contact means operable from closed to open position in response to a variation in the energy value supplied to said relay, switching means operable from closed to open position for causing a variation in the total circuit resistance sufficient to cause said operation of said contact means, and a thermal resistor responsive to the presence of a flame at the pilot burner for varying in resistance value sufficient to compensate for said variation and prevent said contact operation, of a thermal timing element operatively associated with said switching means for causing said operation thereof upon expiration of a predetermined period during which said thermal resistor has time to become responsive to said flame, a heater coil for said timing element connected in circuit with said contact means for initiating said period in the closed position of said contact means, electrically operable means for controlling the supply of fuel to the main burner, and second switching means operatively associated with said timing element for completing a circuit in parallel with the last said circuit for energizing said electrically operable means while said contact means remain in said closed position.

2,452,337
CIRCUIT ARRANGEMENT FOR THE AMPLIFICATION, FREQUENCY-TRANSFORMATION, OR PRODUCTION OF ULTRA HIGH FREQUENCY OSCILLATIONS
Maximiliaan Julius Otto Strutt and Aldert van der Ziel, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 21, 1943, Serial No. 487,978
In the Netherlands August 20, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 20, 1961
3 Claims. (Cl. 250—27)

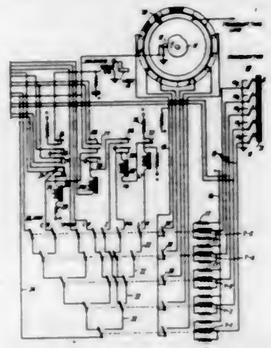
1. A circuit arrangement for the translation of ultra-high-frequency oscillations comprising a discharge tube which successively contains a cathode, a signal control grid, a first positive grid, a negative grid, a second positive grid and an anode, a resonant input circuit tuned to the frequency of the oscillations and connected between said cathode and said control grid, an output load circuit connected to said anode, said control grid having a negative potential or cathode potential, and all grids except the control grid being at cathode potential with respect to radio frequencies, said grids and anode being so constructed and arranged and the direct current voltages applied thereto being so chosen that the electrons, at least for the greater part, perform an oscillatory movement through said first positive grid and within a region defined by said control grid and said negative grid, the electrons passing several times through said first positive grid and the frequency of this oscillatory movement being so related to the operating frequency of the circuit that a decrease in input damping and an increase in dynamic mutual conductance is obtained.

2,452,338
LOGGING CART
Alonzo Z. Thompson, Selma, N. C.
Application February 14, 1947, Serial No. 728,453
8 Claims. (Cl. 214—65.3)



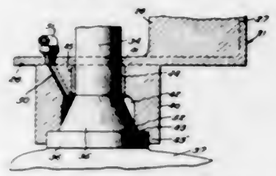
1. A logging cart which includes an arched axle, supporting wheels at opposite ends of the axle, a main tongue extending forwardly from the axle, a draft tongue mounted in the main tongue to move along an axis which lies perpendicular to the axle, a drum mounted to rotate on the axle about an axis which lies perpendicular to the direction of movement of the draft tongue, a logging chain attached at opposite ends to the drum, means extending between the draft tongue and the drum to rotate the drum and wind the logging chain thereon when the draft tongue is extended under the influence of pull exerted thereon, a latch adjacent the forward end of the main tongue releasably to hold the draft tongue against movement when pull is exerted thereon and a latch adjacent the rear end of the draft tongue releasably to hold it extended.

2,452,339
APPARATUS FOR PRINTING AND DRYING OF TEXTILE FABRICS
William Frank Uhlig, Newburgh, N. Y.
Application February 14, 1946, Serial No. 647,472
7 Claims. (Cl. 101—407)



1. An apparatus for printing and drying textile fabric which comprises a printing table, a drying chamber disposed beneath the table, means for pulling successive sections of a continuous sheet of material across the table to be printed, means at one end of the table for snubbing the material uniformly across its entire width, means at the other end of the table for adjusting the material to adjust the woof threads therein, and means within the chamber to suspend at least two lengths of material therein while another length is on the table being printed.

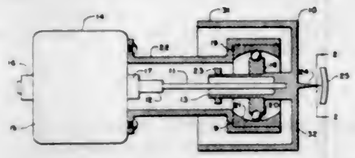
2,452,340
RADIO RECEIVER CIRCUIT ARRANGEMENT
Jan van der Heem, The Hague, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application January 20, 1943, Serial No. 473,026
In the Netherlands January 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires January 29, 1961
4 Claims. (Cl. 250—20)



1. A radio receiver circuit arrangement comprising an electron-discharge tube having a control grid, three anodes and a cathode common to the control grid and the anodes to provide signal detection diode elements, automatic volume control diode elements and amplifier elements, a detector load resistance coupled to the said signal detection diode elements, a volume control load resistance coupled to the anode of the automatic volume control diode elements and to earth, a cathode resistance interconnecting the said cathode and earth and providing a negative grid voltage for the said control grid and a retarding voltage for automatic volume control, and an amplifier tube having a control grid coupled to the detector load resistance and a cathode connected to the junction of said cathode resistance and the said common cathode.

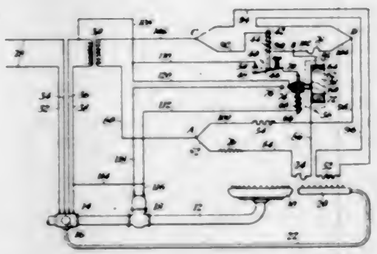
element of said distributor when energized, means energizing said relays in accordance with the signal characters to be transmitted by said transmitter, means counting the signal characters transmitted, means operated by said counting means interrupting the transmission of said signal characters after the transmission of a predetermined number of said signal characters, means operated by said counting means energiz-

ing said relays during said interruption in accordance with function performing characters not appearing in said signal characters whereby said distributor transmits said function performing characters during said interruption and means operated by said counting means reestablishing the transmission of said signal characters after the transmission of said function performing characters.



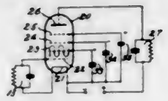
2,452,334
RUDDER ASSEMBLY
Theodore Sprague, IV, New Orleans, La., assignor to Andrew J. Higgins, New Orleans, La.
Application November 23, 1945, Serial No. 630,159
7 Claims. (Cl. 114—169)

1. A rudder assembly comprising a bracket having bearings thereon, a rudder stock mounted in the bearings, one of the bearings being in the form of a sleeve depending from said bracket, said stock having a frusto-conical portion in the sleeve, said sleeve adjacent the frusto-conical portion being hollowed out to form an annular chamber for lubricant, and a flange on the stock at the base of the conical portion, the sleeve having a shouldered recess neatly fitting said flange.



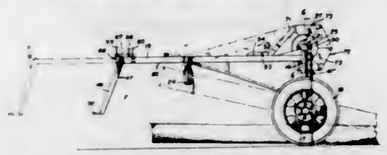
2,452,335
TWO-AXIS RATE GYRO
George H. Stoner, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application December 26, 1945, Serial No. 637,277
5 Claims. (Cl. 33—204)

5. A rate gyro comprising a driving means including a housing and a shaft journaled therein, a gyro wheel mounted on said housing for free rotation about any axis within a cone of freedom about the axis of the shaft, and a resilient rod connecting the gyro wheel with the shaft, whereby



deflection of the spin axis of the gyro wheel with respect to said shaft is resiliently restrained and said deflection is an indication of the angular rotation rate of the housing about any axis perpendicular to the shaft.

2,452,336
SAFETY CONTROL AND IGNITION SYSTEM FOR FUEL BURNERS
Charles K. Strobel, Pittsburgh, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application April 19, 1947, Serial No. 742,522
7 Claims. (Cl. 158—117.1)



4. Safety control apparatus for fuel burners having main and pilot burners, comprising the combination with an electrical bridge circuit including a control relay having contact means operable from closed to open position in response to a variation in the energy value supplied to said relay, switching means operable from closed to open position for causing a variation in the total circuit resistance sufficient to cause said operation of said contact means, and a thermal resistor responsive to the presence of a flame at the pilot burner for varying in resistance value sufficient to compensate for said variation and prevent said contact operation, of a thermal timing element operatively associated with said switching means for causing said operation thereof upon expiration of a predetermined period during which said thermal resistor has time to become responsive to said flame, a heater coil for said timing element connected in circuit with said contact means for initiating said period in the closed position of said contact means, electrically operable means for controlling the supply of fuel to the main burner, and second switching means operatively associated with said timing element for completing a circuit in parallel with the last said circuit for energizing said electrically operable means while said contact means remain in said closed position.

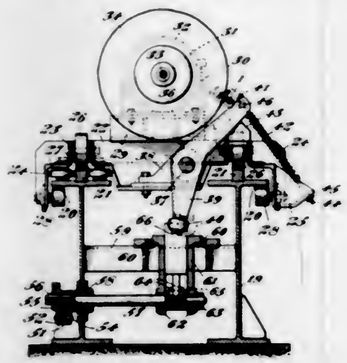
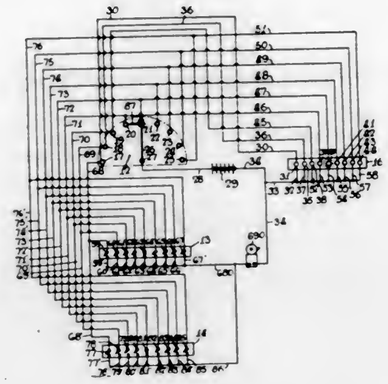
GAME
David Wasserman, New York, N. Y.
Application March 13, 1945, Serial No. 582,566
2 Claims. (Cl. 273—136)

1. A game device comprising a rectangular open tray having parallelly spaced partitions extending between opposite sidewalls thereof, parallelly spaced strips extending between the remaining opposite sidewalls of said tray and intersecting said partitions at right angles so as to define rectangular compartments, said strips being supported substantially on a level with the upper edges of said partitions, an interchangeable individual game piece for each compartment comprising a plate-like body of a rectangular shape substantially conforming to the shape of the compartment, trunnions projecting laterally outwardly from opposite side edges of said body at points midway between the opposite ends of said body, laterally adjacent ones of said partitions being formed with vertical slots midway between the related laterally adjacent strips through which said trunnions project to rest rotatably upon the lower ends of said slots, said lower ends of said slots being positioned at a level to expose a face of said game piece substantially flush with the said upper edges of said partitions, wherein the opposite face of the game piece is at a level below and concealed by the laterally adjacent partitions and strips, one face of said game piece being plain and the opposite face formed with a design, said game piece normally occupying a position with one of its faces exposed flush with the upper edges of said partitions and being rotatable on said trunnions to expose the other face thereof and conceal said one face.



2,452,342
ELEVATOR CONTROL SYSTEM
Gavin Watson, Ossining, and William Henry Bruns, Lincolndale, N. Y., and Harold Edward Galanty, Hillside, N. J., assignors to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application June 24, 1944, Serial No. 541,970
42 Claims. (Cl. 187—29)

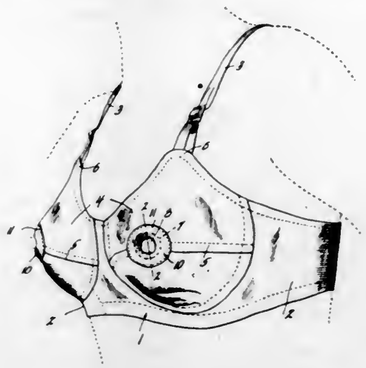
1. A control system for an elevator car in which control means is provided at each of a plurality of landings for registering a call for such landing and in which means is provided which is operable to cause the stopping of the car during its travel in a given direction at landings in response to calls registered by said control means for said landings, characterized in that time controlled means is provided which is operable to cause the stopping of the car during its travel in the opposite direction at a landing in response to a call registered by said control means for that landing



when such call remains unanswered for more than a certain period of time.

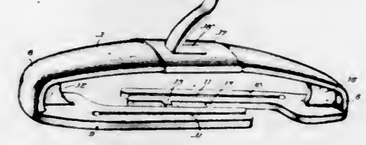
2,452,343
APPARATUS FOR HOT SAWING
Tom Wilson, Baltimore, Md., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application May 23, 1942, Serial No. 444,179
2 Claims. (Cl. 29—69)

1. A machine for severing continuously moving pipe or the like comprising a frame, a reciprocable carriage, a continuously driven saw mounted on the carriage, a rocker arm pivoted to the carriage, a guide for the pipe supported on the rocker arm, a disappearing cam adapted for vertical reciprocation upon the frame beneath the carriage, a cam roller at the bottom of the rocker arm for contacting the disappearing cam, a motor mounted adjacent the frame for reciprocating the carriage, a gear driven by the motor having an extended shaft, a cam fixed to the outer end of said extended gear shaft adapted for rotation therewith, a cam shaft mounted parallel to the gear shaft, a follower on the cam shaft, a roller rotatably mounted on the follower for engaging the cam, means for holding the roller at all times in contact with the cam, a lever arm mounted on the cam shaft, a pitman pivoted to the cam shaft, and co-acting rocking levers pivotally connected between the pitman and the disappearing cam for reciprocating said disappearing cam to bring the pipe in the pipe guide against the saw for cutting the pipe.



2,452,344
VEHICLE SPEED INDICATING DEVICE
Patsy Addorisio, Port Chester, N. Y.
Application October 31, 1946, Serial No. 706,839
1 Claim. (Cl. 177—311.5)

In a vehicle speed indicating device for a vehicle having a front seat for a chauffeur and a rear seat for passengers, comprising, in combination, a series of speedometer switches consisting of a series of contacts and a speedometer pointer adapted in its movement to engage said contacts and thus close circuits in which said contacts are disposed, each of said contacts corresponding to a different rate of speed, a control panel provided with a series of switches equal in number with the number of speedometer switches and each disposed in a circuit which is in series with and individual to a speedometer switch, said control panel being positioned so that the switches thereof are operable by the driver, a second control panel having a series of the switches equal in number to the number of speedometer switches, each in circuit with and individual to a speedometer switch, said second control panel being positioned so that the switches thereof are operable by a passenger in the rear seat, the circuits containing said switches in the second control panel being in parallel with the circuits containing the switches in the first mentioned control panel and both of said circuits being in series with the circuits containing the speedometer switches, a series of lamps equal in number to the number of speedometer switches, each lamp of said series being in circuit with and individual to a speedometer switch and a signalling device in circuit with the switches of both of said control panels.

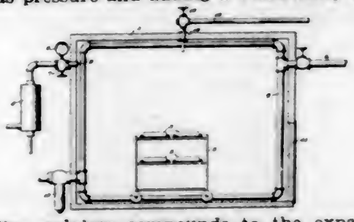


2,452,345
BRASSIÈRE
Ceyl Anselmo, Atlantic City, N. J.
Application February 12, 1947, Serial No. 728,076
1 Claim. (Cl. 2—42)

A brassière, consisting of a frontpiece, straps for attaching across the back of the wearer, shoulder straps attached to the frontpiece, the frontpiece provided with cupped portions, the apices of the cupped portions each provided with a relatively small opening to allow only the nipple to protrude therethrough, and the confining walls of the openings in the apices padded and lined with a relatively soft fabric which padding extends around and within the said openings to

reinforce said openings and to present a smooth surface to the protruding nipples.

2,452,346
GARMENT HANGER
Joseph F. Appleman, Chicago, Ill.
Application January 15, 1946, Serial No. 641,289
7 Claims. (Cl. 223—90)

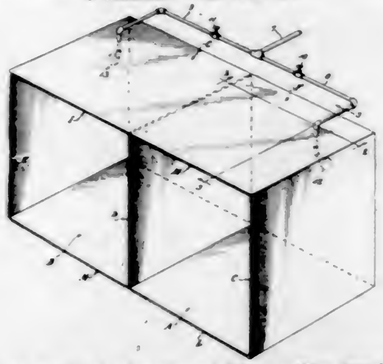


1. A garment hanger, comprising longitudinally opposed and aligned garment shoulder engaging and supporting members having the adjacent end portions thereof reduced in width and arranged in juxtaposed lateral relation, retaining means engaged about and slidably supporting said reduced and juxtaposed end portions, and means positioned between the adjacent sides of said reduced and juxtaposed end portions operable from without the retaining means to transmit longitudinal motion in opposite directions to the same and to their respective aligned garment shoulder engaging and supporting members.

2,452,347
VULCANIZATION
Roger Charles Bascom, Port Clinton, Ohio, assignor to Rubatex Products, Inc., New York, N. Y., a corporation of Delaware
Original application May 1, 1937, Serial No. 140,156. Divided and this application February 13, 1943, Serial No. 475,800
1 Claim. (Cl. 260—725)

The method of manufacturing gas expanded rubber which comprises forming a rubber mix free from any vulcanizing agent heating the rubber mix to a temperature of the order of 280° F., gassing the rubber mix at a pressure of the order of 3000 pounds per square inch to expand the

same fully to its final shape; thereafter reducing the gas pressure and adding a vulcanizing agent



including sulphur compounds to the expanded rubber and vulcanizing the rubber.

2,452,348

FIRE EXTINGUISHING METHOD

Walter A. Beach, Chicago, Ill., assignor to Cardox Corporation, Chicago, Ill., a corporation of Illinois

Application June 23, 1945, Serial No. 601,234
3 Claims. (Cl. 169—2)

1. A method of extinguishing a fire involving a highly flammable, readily displaceable substance that is burning on the floor of an enclosure that is open at its front, comprising releasing liquid carbon dioxide into the enclosure to produce a mixture of snow and vapor, and so directing the mixture that it will impinge against and be deflected by two angularly arranged walls of the enclosure to reduce the velocity of the discharge before the extinguishing medium reaches the floor and to cause the medium to sweep across the floor in a direction substantially paralleling the open front for cutting off flammable vapor rising from the floor to feed the fire.

2,452,349

DIRECTIVE RADIO ANTENNA

Howard I. Becker, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application December 24, 1942, Serial No. 469,986
6 Claims. (Cl. 343—16)

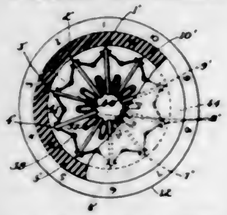
5. The method of indicating the position of a reflecting object in a desired area which comprises projecting a main electromagnetic beam into said area, deflecting a fractional portion only of said beam to form a second beam at an acute angle to said main beam, continuously changing the direction of said deflection thereby continuously to sweep said second beam through a predetermined path defining said area, receiving from said object an echo of said second beam, determining from said echo the direction of displacement of said object from the center of said main beam, and moving said main beam in accordance with said determination to bring said object into said main beam.

2,452,350

METHOD OF PREPARING ALKYL ESTERS OF CHLOROACETIC ACID

William P. Bitler, Haverstraw, Thomas C. Aschner, Stony Point, and Leonard Nicholl, Nyack, N. Y., assignors to Kay-Fries Chemicals, Inc., West Haverstraw, N. Y., a corporation of New York

No Drawing. Application March 20, 1945, Serial No. 583,837
4 Claims. (Cl. 260—487)



1. In the preparation of methyl chloroacetate, the improvements comprising reacting monoethylene glycol mono butyl ether and chloroacetic acid, in the presence of a mineral acid as a catalyst, to form monoethylene glycol mono butyl ether chloroacetate, then reacting the monoethylene glycol monobutyl ether chloroacetate with an excess of methanol, in the presence of sulfuric acid as a catalyst, to give a mixture of monoethylene glycol mono butyl ether and chloroacetic acid methyl ester plus methanol; and fractionating the chloroacetic acid methyl ester in methanol from the monoethylene glycol mono butyl ether to give pure chloroacetic acid methyl ester in substantially water-free non-hydrolyzable condition.

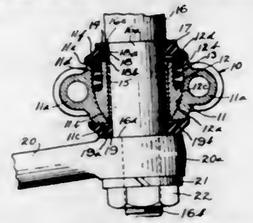
2,452,351

MULTIPLE HOLDER OF QUARTZ OSCILLATOR PLATES

Harvey L. Bloxom and Elbert M. Shideler, Council Bluffs, Iowa

Application September 27, 1946, Serial No. 699,752
7 Claims. (Cl. 171—327)

2. A piezo-electric crystal unit comprising a base having a pair of terminal contacts, a crystal plate holder rotatable on said base, a plurality of crystal plates carried by said holder for progressive movement into closed circuit position with said contacts incident to rotation of said holder, a cover within which said plates are housed, said cover being carried by said holder and serving as means to protect said plates and to facilitate rotation of said holder.



2,452,352

SELF-ALIGNING BEARING

James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio

Application October 25, 1944, Serial No. 560,243
6 Claims. (Cl. 308—72)

1. A self-aligning bearing which comprises a housing having laterally projecting mounting ears, a ball seat in said housing, a ball member tiltably mounted on said seat, a shoulder on said ball member, a spring acting on said shoulder urging the ball member into seating relationship with its seat, a bearing sleeve pressed into said ball member and defining a radial bearing, a shaft

rotatably mounted in said bearing, seal members disposed around said shaft on opposite sides of said housing having opposed concave end faces in sealing engagement with said housing, and means secured to said housing holding said spring in compressed condition on said shoulder of the ball member.

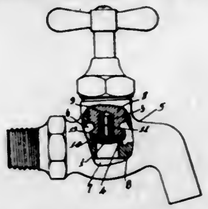
2,452,353

BURIAL DRESS SUPPORT

George T. Brownson, Philadelphia, Pa., assignor, by direct and mesne assignments, to James J. Duffy, Yeadon, Pa.

Application October 11, 1946, Serial No. 702,765
1 Claim. (Cl. 2—64)

An elongated support adapted to be inserted between the lower portion of the torso and limbs of a deceased person and a dress worn by such person, said support being arcuate in transverse section and the end thereof registering with the nether portions of the limbs being wider than the other end of said support, spaced guide grommets on the underside of said support near the wide end thereof, and a deformable, form-retaining band slidably mounted in said grommets, with the portion of said band between said grommets free to be deformed into a member engaging the limbs of said person near the extremities thereof.



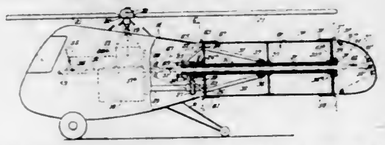
2,452,354

FAUCET VALVE ELEMENT

Ernest H. Bucknell and Ralph E. Bletcher, Los Angeles, Calif., assignors of ten per cent to Ralph E. Bletcher, twelve and one-half per cent to Ernest H. Bucknell, twelve and one-half per cent to Mabel Bucknell, ten per cent to Pearl White Bletcher, twenty-five per cent to Marcia Bucknell Liston, ten per cent to James H. Bletcher, ten per cent to Hazel Bletcher Skinner, and ten per cent to Charlotte R. B. Robinson, all of Los Angeles, Calif.

Application November 30, 1944, Serial No. 565,880
1 Claim. (Cl. 251—160)

The combination with a faucet having a valve stem and a co-acting valve seat, of a washer element comprising a disc having an integral stem extending from the disc, the valve stem having a cylindrical bore formed therein, said integral stem having an open axial cavity extending inwardly from its free end to provide for radial compression of said integral stem, means for moving the valve stem toward the seat to engage the valve disc therewith whereby the valve disc may accommodate itself to irregularities of the



valve seat and may be arrested from rotation with reference to the seat as the valve stem is rotated to complete the compression between the disc and the seat.

2,452,355

TORQUE CONTROL FOR HELICOPTERS

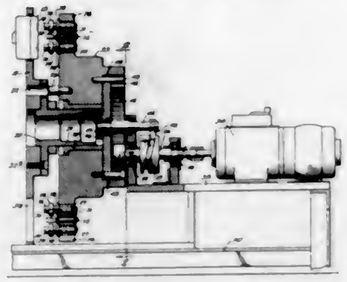
James Nall Candler, Grosse Pointe, Mich., assignor to Borg-Warner Corporation, a corporation of Illinois

Application September 11, 1944, Serial No. 553,510
14 Claims. (Cl. 244—17)

1. In a device adapted to operate in a fluid, means reacting against the fluid for propelling or controlling the movement of the device through the fluid, said means when in operation creating a turning moment on the device and a movement of the fluid; means responsive to the movement of the fluid to produce a Magnus effect for balancing the aforesaid turning moment; and controllable pivoted means coacting with said balancing means adapted for movement to active and inactive positions and adapted when in said active position to define the limits of the Magnus effect thereon.

2,452,356

PALLET OF THE LOAD-SUPPORTING TYPE, WITH CASTERS



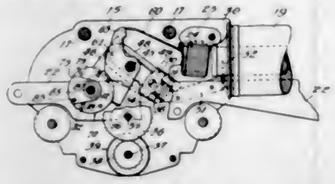
Burton C. Colt, Jr., Washington, Pa., assignor to Tri-State Engineering Company, Washington, Pa., a corporation of Maryland

Application May 21, 1947, Serial No. 749,501
7 Claims. (Cl. 248—120)

2. A pallet comprising a deck portion having an underframe connected thereto by truss elements, leg-like elements secured to the underframe and the deck at each corner thereof and extending below the underframe, and wheels disposed between the leg elements at the various corners and extending below the lowermost plane of said elements, but with their axes located a substantial distance above said plane, the leg elements having portions extending outwardly from said wheels in position to be supported by crate walls upon which the pallet may be superimposed.

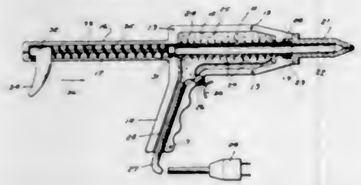
2,452,357
MANUFACTURE OF PLASTIC CONTAINERS
Fred V. Collins, Des Plaines, Ill., assignor to William F. Stahl, Kenilworth, Ill.
Application March 12, 1947, Serial No. 734,068
16 Claims. (Cl. 154—1)

1. In apparatus for uniting a fusible plastic tube and disk to form a closed end tube, a frame, a conveyor mounted thereon, a plurality of spaced mandrels carried by said conveyor and adapted to receive said plastic tubes and disks, a plurality of dies, means for shaping said tubes by turning their ends inwardly through the movement of said mandrels into engagement with said dies, and means for uniting the shaped tube and disk on each mandrel by subjecting the same to the action of heat and pressure.



2,452,358
AXLE AND FIFTH WHEEL ASSEMBLY FOR FARM WAGONS
Fred Joe De Long and Fred J. De Long, Jefferson City, Mo.
Application February 22, 1945, Serial No. 579,214
3 Claims. (Cl. 280—133)

1. In a chassis construction of the class described a forward axle and wheel assembly comprising an inverted arched axle, wheels mounted on the outer ends of said axle, a fifth wheel disc welded on the central portion of said axle, a second corresponding disk superposed and pivotally mounted on said first-named disk, a web attached to and rising from said second-named disk, and a bolster supported above and from said web, together with clips secured to said axle adjacent opposite ends thereof and provided with eyes, said eyes constituting bearings, and a tongue section including a portion rockably mounted in said bearings.

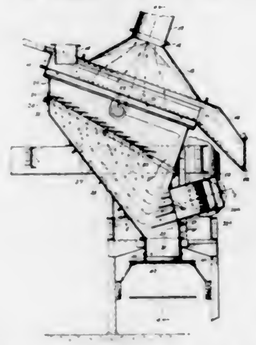


2,452,359
JOB TIME RECORDER SYSTEM
Adolph L. Denniston, Plainfield, N. J., and Samuel Harold Martin, Thomaston, Conn., assignors to General Time Instruments Corporation, New York, N. Y., a corporation of Delaware
Application February 26, 1942, Serial No. 432,386
11 Claims. (Cl. 58—24)

10. In a time system including a master clock, secondary mechanism in circuit therewith comprising electromagnet means for advancing the same step by step upon the receipt of electric impulses transmitted by said master clock, elapsed time recording means driven by said electromagnet means, locking means and control means therefor, said locking means adapted to be controlled conjointly by said master clock and said control means in order to lock said secondary apparatus in a chronologically synchronized position with respect to said master clock, said control means comprising a rotatable element cooperating with said locking means and driven by said electromagnetic means through a chrono-

logical cycle of operation corresponding to the chronological cycle of said master clock, said cycle including a plurality of positions corresponding to times during which said locking means are not rendered inoperative by said control means, whereby said chronologically synchronized position may be shifted with respect to said master clock so that a predetermined interval during which said secondary mechanism is disconnected from said master clock will not be recorded by said elapsed time recording means.

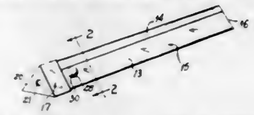
2,452,360
SOLDERING GUN
Frank Dunham, Grand Island, Nebr., assignor of fifty per cent to John F. McCarthy, Grand Island, Nebr.
Application December 23, 1946, Serial No. 717,947
1 Claim. (Cl. 219—27)



A soldering gun comprising in combination, an elongated body formed with a longitudinally extending chamber, a laterally projecting handle at one end of said body, a tubular solder magazine extending longitudinally through said chamber, a soldering tip removably positioned at the remaining end of said body and in contact with the adjacent end of said magazine, an electric heating element positfoned in said chamber and surrounding said magazine, packing of heat insulating material provided in said chamber, said tip being formed with an outlet passage communicating with said magazine, a switch provided on said body adjacent said handle, a current conductor extending through said handle and being connected to said element and to said switch, a longitudinally slotted sleeve provided at the handle end of said body, a push rod in said sleeve, a plunger slidable in said magazine and secured to one end of said push rod, a finger piece at the remaining end of said push rod, said finger piece extending slidably through the slot in said sleeve, and a compression spring between said finger piece and the adjacent end of said magazine.

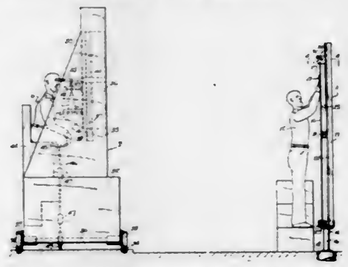
2,452,361
METHOD FOR ELECTROLYTIC DEPOSITION OF INDIUM, AND BATH THEREFOR
John Robert Dyer, Jr., Utica, N. Y., assignor to The Indium Corporation of America, New York, N. Y., a corporation of New York
No Drawing. Application March 23, 1945, Serial No. 584,495
4 Claims. (Cl. 204—45)

1. A bath for electrolytic deposition of indium which consists essentially of a solution resulting from dissolving indium hydroxide in formamide, said solution having a concentration of from 10 to 100 grams per liter of indium hydroxide in formamide.



2,452,362
APPARATUS FOR TREATING FLOWABLE SOLIDS
John L. Erisman, Oak Park, Ill., assignor to Link-Belt Company, a corporation of Illinois
Application December 19, 1944, Serial No. 568,859
4 Claims. (Cl. 22—89)

4. Apparatus for cooling and screening hot foundry sand, comprising a vibrating screen receiving the hot sand, a pan attached to the screen to vibrate therewith, an inclined, stepped wall structure positioned in the pan and having a discharge opening at its lower end, said wall structure having openings for the passage of cooling air, a stationary hopper underlying the pan and having a discharge opening vertically aligned with the discharge opening of the pan wall structure, a forced air duct opening through the side wall of the hopper that is adjacent the said vertically aligned discharge openings so as to discharge the flow of cooling air at right angles to the path lying between said openings, a series of vanes having stepped outer edges, positioned in the hopper in alignment with the air duct opening and projecting into the said path lying between the discharge openings, the cooling air entering the hopper being directed to flow through the air openings in the pan wall structure and through the vibrating screen, and means overlying the vibrating screen to exhaust the air.

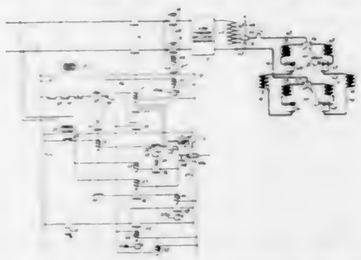


2,452,363
NOVELTY OPTICAL DEVICE
Frank Earl Flotron, St. Louis, Mo.
Application February 20, 1947, Serial No. 729,719
2 Claims. (Cl. 88—15)

1. A device for producing multiple reflective images, and consisting of a tubular structure having openings at its opposite ends, the tubular structure being formed to provide a plurality of highly reflective planar surfaces interiorly of the tubular structure, and a movable refractor of spherical form bridging certain of the walls of the tubular structure although axially positioned

therein and capable of rotative movement within and with respect to the tube for the purpose of varying the nature and relation of images reflected by said reflective surfaces.

2,452,364
METHOD AND APPARATUS FOR PRODUCING OPTICAL ELEMENTS FROM COMMERCIAL PLATE GLASS
Ival G. Fowler, Toledo, and Donald W. Dunipace, Perrysburg, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 16, 1942, Serial No. 469,182
10 Claims. (Cl. 88—14)



1. An apparatus for the optical inspection of sheets or plates of glass or similar material to determine the amount of wedge therein, comprising elevator means for supporting the sheet to be inspected, inspection means remote from said sheet as measured along the line of sight thereto, said inspection means including a light diffusing screen having an opening therein, a source of substantially monochromatic light in back of said diffusing screen for illuminating the same and which in turn illuminates a portion of the sheet and a telescope directed through the opening in the diffusing screen and through which the illuminated portion of the sheet can be examined for interference fringes, and means for moving the sheet and the inspection means relative to one another to effect the progressive illumination and examination of other portions of the sheet.

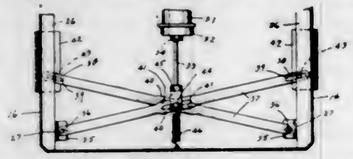
2,452,365
CONTROL SYSTEM
Oscar C. Frederick, Springfield, Pa., assignor to General Electric Company, a corporation of New York
Application March 1, 1944, Serial No. 524,658
6 Claims. (Cl. 171—97)

6. A control system for two load devices comprising a biased open power switch for controlling the power supply to said load devices, a power coil for closing said power switch, control supply connections, a normally closed control switch, a first coil, a biased closed first time switch, first and second biased open manually operated switches, latching means movable to a position to secure said second manually operated switch in its closed position, a latch coil for op-

erating said latching means, connections connecting said control switch, said manually operated switches, said first coil, said first time switch and said latch coil in series with each other to said control supply connections so that when said manually operated switches are closed said first coil is energized and said latch coil is energized to secure said second manually operated switch in its closed position, second and third coils connected in parallel with each other through said control switch and said second manually operated switch to said control supply connections and in parallel with said first coil, said first time switch and said first manually operated switch, a biased open first switch in circuit with said second coil, a fourth coil, operating connections between said first switch, said first time switch and said fourth coil, switching means operated by said first coil for energizing said fourth coil for closure of said first switch to energize said second coil and to bias said first time switch to open after a predetermined time interval, a biased open second switch closed by said second coil for energizing said power coil to close said power switch, a normally open interlock switch closed by said power coil connected

across said first manually operated switch, an electric alarm device, a biased open second time switch in circuit with said alarm device energized by said switching means for operation of said alarm device after a predetermined time interval, a biased open third time switch connected in circuit with said alarm device, a biased open switch operated by said third coil in circuit with said third time switch, a biased closed switch in circuit with said third time switch operated to an open position by said first coil so that when said first time switch opens to deenergize said first coil said switch is closed for energization of said third time switch and operation of said alarm device after a predetermined time interval, a double-throw selector switch movable to one or the other of two closed circuit positions for selectively connecting one or the other of said load devices to the power supply through said power switch, operating means for said selector switch, and an operating connection between said operating means and said control switch for effecting the opening of said control switch prior to movement of said selector switch to its open position and for effecting the closure of said control switch after said selector switch has been moved to its other closed position.

2,452,366



PATIENT ADJUSTABLE FOOT SECTION FOR ARTICULATED BEDS

Robert R. Freund, Mount Carmel, Ill.

Application August 11, 1944, Serial No. 548,985

9 Claims. (Cl. 5—92)

8. In a bed structure having a foot board extending across the structure and movable longitudinally thereof and side members at opposite sides of the structure and supporting the foot board in elevated relation to said structure for clearance purposes, the combination therewith of means for moving said board longitudinally of said structure, said means including a pair of crossed links each having a length of the order approximately that of the length of the board or bed width, means disposed centrally of the structure and directed longitudinally thereof and

for collapsing and extending said links, one end of each link being pivotally connected to a side member and the other end of each link being pivotally connected to the bed structure, one of the two pivotal connections for each link being of the pin and slot type, and pin and slot connections between the links where crossed and the said centrally disposed means for simultaneous movement of the links and corresponding movement of the foot board.

2,452,367

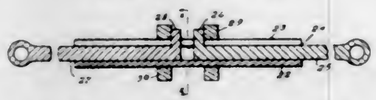
DRAIN TRAP CLEANING DEVICE

Wilmer Charles Gangloff, Cincinnati, Ohio, assignor to The Drackett Company, Cincinnati, Ohio, a corporation of Ohio

Application April 5, 1946, Serial No. 659,693

12 Claims. (Cl. 219—38)

1. A plumbing drain trap having an electrical heating element embedded in the lower bend thereof, said heating element being so disposed as to effect distribution of heat over a substantial portion of the area of said bend, said element having terminals for connection to a source of electrical energy.



2,452,368

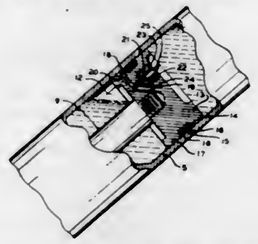
LINE TIGHTENER

Charles Gobel, Philadelphia, Pa.

Application September 7, 1944, Serial No. 553,006

2 Claims. (Cl. 254—67)

1. A line tightener, comprising a tube exteriorly threaded and having a longitudinally extending slot opening through its periphery and adapted for connection to a line, and a line connecting member in the form of a rod closely fitting the bore of the tube and having a projection extending through the slot, and a nut engaging the threads of the tube to adjust the position of said projection longitudinally of the tube.



2,452,369

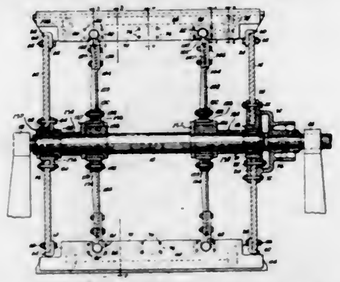
SELF-BLEEDING HYDRAULIC CYLINDER

Everett Gravenhorst and Raymond E. Vaughn, Middle River, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland

Application July 12, 1946, Serial No. 683,266

4 Claims. (Cl. 121—38)

2. In a hydraulic cylinder adapted to be mounted at an angle to the horizontal, a piston mounted to slide within said cylinder, a fluid pressure sealing means between the side wall of said piston and said cylinder, an annular groove in said piston side wall positioned between said sealing means and the lower face of said piston, a passage interconnecting said groove and the upper face of said piston, valve means in said passage to allow trapped air to flow therethrough but will close said passage to the flow of hydraulic fluid.



2,452,370

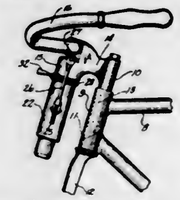
YARN-ADVANCING REEL

Arthur E. Guenther, Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application May 23, 1946, Serial No. 671,741

6 Claims. (Cl. 28—71.6)

1. In a yarn-advancing reel, a reel axle, a set of spaced fixed yarn-contacting bars arranged concentrically about said reel axle, means to rotate said fixed yarn-contacting bars about the center axis of said axle, a set of movable channel-shaped yarn-contacting bars, each of said fixed yarn-contacting bars being disposed in the channel of a channel-shaped yarn-contacting bar, a pair of spaced skewed eccentrically mounted discs on said axle and carrying said channel-shaped yarn-contacting bars, means to secure one of said channel-shaped yarn-contacting bars in driving relationship with said discs, and a joint between each of the remaining channel-shaped yarn-contacting bars and said discs whereby radial and axial movements are imparted to each of said remaining channel-shaped yarn-contacting bars and such channel-shaped bars are maintained parallel to the center axis of said axle during rotation of the reel.



2,452,371

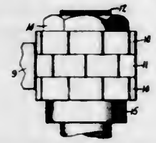
HANDLE BAR SHOCK ABSORBER

Joseph Paul Guttormsen, Kenosha, Wis.

Application November 9, 1945, Serial No. 627,612

11 Claims. (Cl. 74—551.2)

1. A handle bar structure for cycles, comprising a support, a pair of oppositely directed handle bar arms independently hingedly mounted at their adjacent inner ends on the support, a shock absorber connected with both of said handle bar arms to yieldingly, equalizingly resist hinging movement of the same, and means for selectively rendering said shock absorber active or inactive.



2,452,372

CAM MECHANISM

Joseph R. Harkness, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

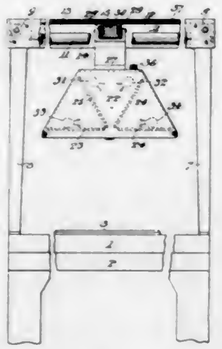
Application November 2, 1944, Serial No. 561,568

2 Claims. (Cl. 74—567)

1. A cam mechanism for actuating a periodically operated device comprising a rotatable cam shaft, a multi-lobe composite cam member comprising three cam laminations fixedly mounted on said cam shaft adjacent each other with the lobes of the outer cam laminations arranged in axial alignment and the lobes of the intermediate laminations circumferentially spaced from the lobes of outer laminations, a single cam follower having a member engaging and bridging all three of said cam laminations and means for biasing said cam follower into engagement with said cam member.

2,452,373

METHOD OF AND MEANS FOR REGISTERING FLAT BED COLOR PRINTING ELEMENTS WITH THEIR FIXED REGISTRY ELEMENTS



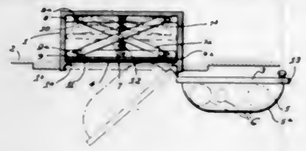
Earle L. Harley, Brooklyn, N. Y., assignor to H. H. Heinrich, Inc., New York, N. Y., a corporation of New York

Application May 15, 1947, Serial No. 748,166

14 Claims. (Cl. 101—401.2)

1. The method of registering flat bed color printing elements with fixed registry elements

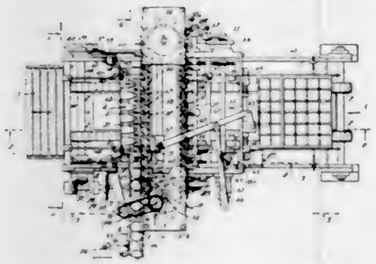
comprising arranging a double mirror unit having two oppositely disposed sets of coacting horizontal transparent and angular non-transparent mirrors between the printing and registry elements in position to cause a non-transparent mirror to receive the image of the registry element by reflection from the transparent mirror and to receive the image of a coacting printing element directly



through the transparent mirror, the said non-transparent mirror reflecting the combined images to the eye of an observer, and moving the printing elements parallel to the registry elements to bring the images of the printing elements into accurate register with the reflected images of their registry elements on the non-transparent mirrors.

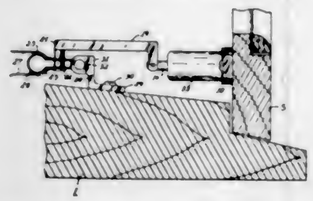
2,452,374
ANACARDIC-ACROLEIN RESINS AND METHOD FOR THEIR PRODUCTION
Mortimer T. Harvey, South Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application August 30, 1944, Serial No. 552,004
8 Claims. (Cl. 260—46)

1. The method for producing a resinous organic condensation reaction product comprising heating at 80° C.–125° C. a mixture of acrolein, an anacardic material selected from the group consisting of cashew nut shell liquid and its polymers, distillates of cashew nut shell liquid and their polymers, residues of cashew nut shell liquid and their polymers, said distillates having a boiling point of approximately 225° C. at 10 mm. of mercury pressure, said residues obtained by heat distilling cashew nut shell liquid until the quantity by weight of said residue is between 25% to 75% of the quantity by weight of said cashew nut shell liquid, and a condensing agent, the ratio by weight of said acrolein to said anacardic material in said mixture being in the range of 1–10 to 2–1, said heating continued until said resinous organic condensation reaction product is produced.



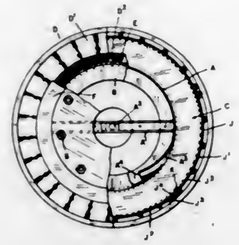
2,452,375
CABINET HAVING AUTOMATICALLY SHIFTABLE MIRROR
Julius H. Hirshbergh, Los Angeles, Calif.
Application May 9, 1945, Serial No. 592,855
11 Claims. (Cl. 312—186)

1. In a structure of the class described, a cabinet open at its outer side, a mirror movably mounted in the cabinet and shiftable within the cabinet from the inner to an outer position over the opening, means for supporting the mirror in the cabinet to facilitate such shifting, and a door for the cabinet, said door being provided with



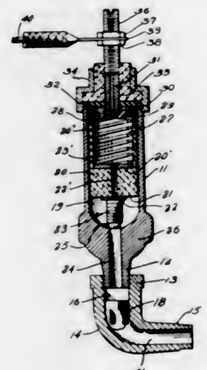
means to shift the mirror inwardly when the door is closed.

2,452,376
BOTTLE PACKING MACHINE
Kaye B. Hoistebroe, Gildersleeve, and Ludwig Wimmer, Middletown, Conn., assignors to Standard-Knapp Corporation, Portland, Conn., a corporation of New York
Application November 4, 1942, Serial No. 464,444
19 Claims. (Cl. 226—14)



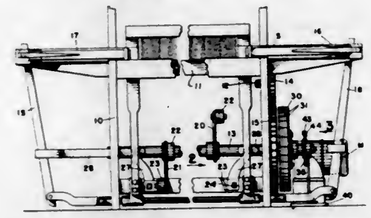
1. In apparatus of the class described, mechanism for depositing rows of bottles successively in each of a series of successive cases, step-by-step mechanism for feeding the cases successively past the depositing mechanism to receive the bottles, and clearing mechanism operative in response to incorrect positioning of a bottle in a case to interrupt the operation of the depositing mechanism and to cause the case feeding mechanism to remove the partly filled case beyond the depositing mechanism.

2,452,377
WINDOW LATCH
George A. Houseman, Phoenix, Ariz.
Application February 13, 1947, Serial No. 728,301
5 Claims. (Cl. 292—1)



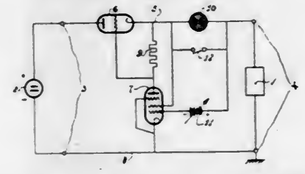
1. A device of the class described, comprising a base member adapted for attachment to a window screen or the like; an elongated latch arm pivotably mounted at one of its ends on said base member, and provided with a spring clamp pivotably mounted on its other end.

2,452,378
CABLE REEL
Charles J. Hudson, Detroit, Mich.
Application October 29, 1945, Serial No. 625,311
9 Claims. (Cl. 242—77)



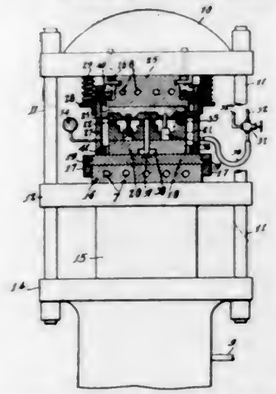
1. A cable reel comprising a drum, side plates detachably secured to the opposite ends of said drum, and ground engaging wheels independently revolubly mounted on said side plates.

2,452,379
LUBRICATION FAILURE DETECTOR SWITCH
Wesley J. Kasparek, Columbus, Ga.
Application January 15, 1946, Serial No. 641,380
2 Claims. (Cl. 200—82)



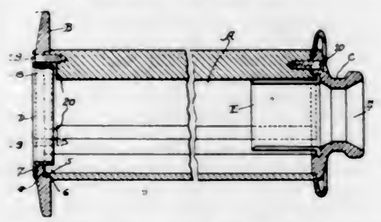
1. A pressure switch comprising a metallic hollow cylindrical casing securable at one end thereof in pressure-communicative relation to a pressurized fluid system, a piston of insulating material having a bore within said cylinder, a helical spring within said bore, metallic members contacting the inner and outer ends of said spring, a cap closing the outer end of said cylinder, a screw-threaded electrical terminal non-conductively secured in said cap and electrically connected to the said metallic member at the outer end of said piston, and an electrical contact exteriorly secured on the inner end of said piston and conductively connected to the one of said metallic members on the inner end of said spring, said contact being positioned to contact a portion of said cylinder when the pressure on said fluid is insufficient to retract said piston against the action of said spring.

2,452,380
REVERSING MECHANISM FOR LOOMS
Clarence R. Kronoff and Victor F. Sepavich, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application March 19, 1947, Serial No. 735,708
7 Claims. (Cl. 139—1)



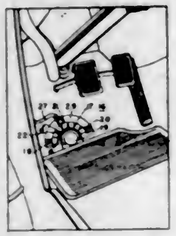
1. In electric reverse means for the driving motor of a loom having two parts which cooperate to pick a shuttle when the loom is running forwardly, a normally closed electric switch, elcetric circuit means including the switch effective when closed to cause reverse motion of the motor and loom, and means operated by the loom effective during reverse motion of the loom to open said switch before said picking parts engage each other.

2,452,381
LOW DIRECT CURRENT VOLTAGE REGULATING CIRCUIT
Hendrik Jan Lindenhovius, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 26, 1946, Serial No. 665,302
In the Netherlands October 17, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 17, 1962
5 Claims. (Cl. 323—22)



5. Apparatus for supplying a constant voltage to a load comprising a direct current source subject to fluctuations and connected across said load, an electron discharge device having a cathode, a control electrode and an anode, a glow discharge device interposed in series with said electron discharge device between the positive lead of said source and said load, the anode of said electron discharge device being connected to said positive lead and the cathode of said electron discharge device being connected via said glow discharge device to one end of said load, an electron discharge tube having a cathode, a control grid and an anode, an anode resistor for said tube, the cathode of said tube being connected to the negative terminal of said source, the anode of said tube being connected to the control electrode of said electron discharge device and via said resistor to the cathode of said electron discharge device, and an adjustable source of bias potential connected between the control grid of said tube and the junction of said load and said glow discharge device.

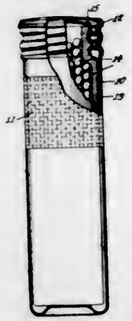
2,452,382
APPARATUS FOR MOLDING RUBBER AND PLASTIC MATERIALS
Emmet S. Long, Los Angeles, Calif.
Application April 30, 1945, Serial No. 591,162
2 Claims. (Cl. 18—16)



1. An apparatus for molding articles comprising means forming a supply chamber for molding material, molding members, one of said molding members having openings communicating with said supply chamber, said molding member being movable relative to the remaining molding members, said molding members providing molding cavities, means for evacuating said molding cavities, means for exerting pressure on the molding material in said supply chamber for forcing a part, but not all, of said material into said cavities through said openings, while forming cores of material connecting the molding material in said cavities with residual material in said supply chamber, means for introducing air pressure between said residual material and the molding material in said cavities for moving the molding member having said openings relative to the remaining molding members for severing said cores, and means for positively moving the molding member having said openings relative to the residual material after severing of said cores.

2,452,383
SPOOL OR BOBBIN
George B. Markle, Jr., Hazleton, Pa., assignor to Freeland Spool & Bobbin Corp., Hazleton, Pa., a corporation of Pennsylvania
Application March 4, 1946, Serial No. 651,899
4 Claims. (Cl. 242—46.3)

1. In a spool, bobbin or the like, a hollow open-ended barrel provided interiorly with longitudinally extending spaced ribs extending substantially throughout the length of the barrel, a head at each end of the barrel and each provided centrally with an aperture, a tubular hollow bearing disposed and supported within one end of the barrel, the aperture of the head at the opposite end of the barrel provided with a bearing rir ;, a hollow adapter disposed wholly within the barrel and said ring and provided exteriorly with spaced longitudinally extending grooves interlocking with the ribs of the barrel, a drive spindle having driving connection with said adapter and extending therethrough, the outer end of said spindle being rotatably supported in the tubular bearing in the opposite end of the barrel.

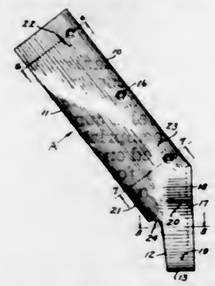


2,452,384
AUTOMOBILE RADIO REMOTE CONTROL
Eugene F. McDonald, Jr., Chicago, Ill.
Application July 14, 1944, Serial No. 544,901
13 Claims. (Cl. 250—20)

3. In a control system for a radio receiver in a vehicle, said receiver having means for sequentially selecting predetermined signals and means for muting the output volume of said receiver, the combination of a footswitch located for convenient operation by the vehicle driver while his attention is absorbed in the operation of said vehicle, said footswitch having a member operable in one fashion to cause said muting means to mute the output volume of said receiver and operable further in the same fashion to cause said signal selecting means to select a predetermined signal, said member of said footswitch being operable in a different fashion for adjusting over a range the output volume of said receiver, means located at a position in said vehicle different from said footswitch for consecutively disabling said footswitch to control adjustment of said output volume and thereafter adjusting the volume of output of said receiver, resilient means for resisting movement of said footswitch member when moved in such a direction to cause the muting means to mute the output volume of said receiver and for resisting with sensibly greater resistance after actuation of said muting means further movement of said member to provide an indication by the sense of feel of the position of said footswitch member.

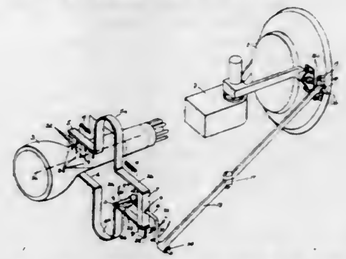
2,452,385
COLOR COMPARISON APPARATUS
Frederick G. Merckel, Montclair, N. J.
Application December 30, 1943, Serial No. 516,174
1 Claim. (Cl. 23—253)

A color comparison apparatus for use in transillumination, comprising a substantially cylindrical, smooth-walled container of substantially uniform wall thickness and of substantially colorless, translucent solidified plastic material, said container having a mouth portion having an internal diameter substantially the same as that of the body portion of the container, said mouth portion being formed to provide external threads, a removable closure adapted to be threaded onto said mouth portion, and a color band of translucent lacquer superimposed on the upper part of the body portion of said container and extending entirely around it, said color band being relatively wide as compared to the height of said container, a second container for a supply of an indicator to be used in definite amount in any one test comparison, said second container being removably disposed within the first



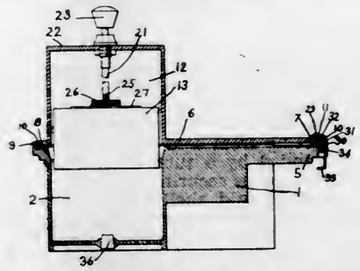
named container, said color band having a color such that when viewed by trans-illumination it will provide a color field of exactly the color of the solution contiguous therewith and to which has been added a predetermined quantity of said indicator when that solution has a desired concentration of the material for which the test is being made.

2,452,386
ETHERS OF VITAMIN A
Nicholas A. Milas, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Original application February 8, 1940, Serial No. 317,967. Divided and this application April 1, 1946, Serial No. 658,889
3 Claims. (Cl. 260—611)



1. As a new product the methyl ether of vitamin A.

2,452,387
PLOWSHARE
Edward R. Mossak, Milwaukee, Wis.
Application October 22, 1945, Serial No. 623,724
3 Claims. (Cl. 97—125)



1. A plowshare comprising, a leading point having an approximately plane land side guiding surface and a lower front cutting edge disposed approximately perpendicular to said surface, and a blade extending laterally away from said point at an oblique angle and having a straight lower cutting edge adapted to travel in a plane above said point edge, both said blade and said point having convex upper surfaces adjoining said edges adjacent to said point and said blade having a concave upper surface directly adjoining its straight cutting edge remote from the point.

2,452,388
ELECTROMAGNETIC SYSTEM
Arthur V. Nichol, Elkins Park, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 20, 1944, Serial No. 555,022
3 Claims. (Cl. 177—352)

2. An electronic motion indicator comprising in combination with a movable device, the position of which is to be indicated, an electronic beam device having a neck through which an electron beam is projected, stationary magnetic flux conducting means having a pole shoe on each side of said neck, a permanent magnet in inductive relation to said magnetic flux conducting means, a rotatable support for said magnet for varying the magnetic flux crossing said neck in response to movement of the permanent magnet, a crank on said support, and a linkage between said crank and the movable device, the position of which is to be indicated.

2,452,389
SELF-CONTAINED PORTABLE FILM DEVELOPING APPARATUS
Norman W. O'Clair, Somerville, Mass.
Application February 21, 1946, Serial No. 649,273
10 Claims. (Cl. 95—90.5)

1. A film developing apparatus comprising a body section provided with a compartment to contain a developing solution, a cover section fitting the body section with a light-tight joint, a film carrier having a central hollow hub portion and a film-receiving chamber surrounding said hub and open at its upper end, a bar extending transversely across said hub portion, a carrier-supporting rod extending through the cover section and adapted for vertical movement relative thereto, said rod having a hook at its

lower end to engage said bar, and also having a screw threaded portion above the hook, a cover member for the open upper end of the film-receiving chamber, and a nut screw threaded to the rod, for both clamping the cover to the film carrier and locking the hook to said bar.

2,452,390

PREPARATION OF HYDROLYZABLE TITANIUM SOLUTIONS

Carl Marcus Olson, Oak Ridge, Tenn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 1, 1944, Serial No. 538,339
12 Claims. (Cl. 23—202)

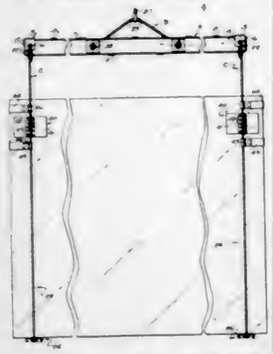
1. A method for obtaining an improved hydrolysate from a concentrated, hydrolyzable titanium salt solution having not less than 180 g./l. TiO_2 and containing seed nuclei adapted to accelerate its hydrolysis, comprising heating said solution after it has been nucleated to increase its colloidal TiO_2 content, upon an increase in turbidity of said solution taking place as a result of said heating but prior to formation of a substantially filterable TiO_2 precipitate in the solution, interrupting said heat treatment and thereupon mixing a sufficient quantity of a diluent with the colloidally enriched solution to reduce its TiO_2 concentration to below 160 g./l., and then heating the resulting diluted titanium solution to effect its hydrolysis and precipitate said improved TiO_2 hydrolysate.

2,452,391

HEAT EXCHANGER

Frederick J. O'Sullivan, Johnstown, Pa., and William B. du Pont deceased, late of Johnstown, Pa., by Mary A. du Pont, administratrix, Johnstown, Pa., assignors to The National Radiator Company, Johnstown, Pa., a corporation of Maryland

Application January 18, 1946, Serial No. 641,930
1 Claim. (Cl. 257—239)



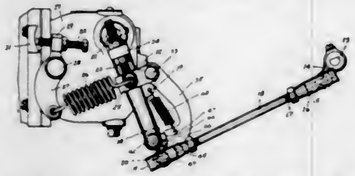
A heat exchanger comprising an elongated shell provided with inlet and outlet ports and having an open end surrounded by a flange, a U-tube disposed in the shell with the open ends of the tube projecting from said open end of the shell and surrounded by a tube sheet engaging said shell flange, means securing said flange and tube sheet together, said shell having opposite side walls provided with a pair of oppositely disposed slots extending lengthwise of said walls from said open end, a baffle plate between the two legs of the tube and extending lengthwise thereof from said tube sheet with its opposite edges disposed in said slots, and webs extending lengthwise of the central portion of said plate and connecting it to the legs, said tube legs being provided with circumferentially spaced fins extending lengthwise thereof with the fins at the top and bottom of the U-tube engaging said tube sheet, the rest of said fins being spaced from the tube sheet, and at least one of said ports opening into the space between said last-mentioned fins and sheet and straddling one of said sheet-engaging fins.

2,452,392

GLASS HANDLING DEVICE

William A. Philbin, Perrysburg, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio

Application March 29, 1945, Serial No. 585,521
3 Claims. (Cl. 294—74)



1. A device for handling glass plates of large surface area comprising a yoke member, means for attaching said yoke to an overhead lifting and traveling mechanism, a pair of looped plate carrying cables suspended one from each end of said yoke member, a platform member shaped to fit into the loop of each of said cables for supporting the bottom edges of the plates, means for maintaining said cables in spaced relation to the faces of said plates, and means for retaining said plates within said loops.

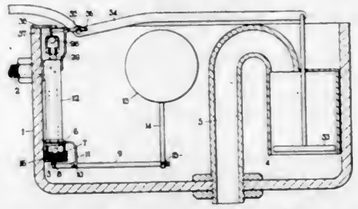
2,452,393

GOVERNOR-THROTTLE CONNECTION

Raymond Reger, Anderson, Ind., assignor to The Pierce Governor Company, Inc., Anderson, Ind., a corporation

Application August 10, 1945, Serial No. 610,157
2 Claims. (Cl. 123—98)

1. A disconnect mechanism between an accelerator operable fuel control valve of an engine and a centrifugally operable governor having an actuating arm for valve control and a load spring, said mechanism comprising in combination an auxiliary arm pivoted on the governor arm, means of appreciably less force than the load spring normally tending to collapse the arms, the load spring application tending to extend the arms, and a rigid member connected to the valve and to the auxiliary arm.



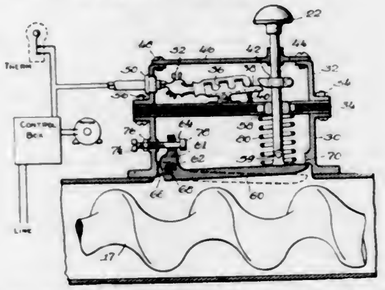
2,452,394

INLET FITTING FOR TANKS

Ernest Ephraim Rigby, Penwortham, Preston, England

Application September 20, 1945, Serial No. 617,480
In Great Britain September 20, 1944
3 Claims. (Cl. 4—41)

1. A flushing water tank including in combination a tank, a water supply pipe projecting into the tank and having its opening disposed substantially at the minimum level of the water in the tank, a float control valve controlling entry of water from said water supply pipe into the tank, a syphonic discharge means for water from said tank, means to put said syphonic discharge



into operation, a connection on said water supply pipe communicating with the outside air, a valve on said connection normally sealing inlet of air thereto, and means to positively displace said valve from its seating whenever said tank is emptied by syphonic action.

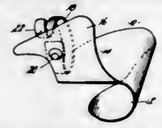
2,452,395

CUTOFF SWITCH FOR SCREW FEEDERS

Clarence Joseph Schelling, Chicago, Ill.

Application July 9, 1946, Serial No. 682,197
4 Claims. (Cl. 198—37)

1. In combination with a stoker fuel feed assembly comprising a screw conveyor tube, a housing attached to the said screw conveyor tube, a divider in said housing to form therein two chambers, the floor of the lower chamber pivotally mounted to said housing and responsive to the pressure of flow of fuel in said screw conveyor tube, means in said lower chamber to limit rise and fall of said pivoted floor, a rod pivotally mounted on said movable floor, the said rod extending thru the said divider, the upper chamber and terminating above said housing, a trip arm attached to the rod portion within the upper chamber and a means in contact with said arm to make and break an electrical circuit actuating the motive power whereby the fuel feed is stopped when there is no pressure in said conveyor tube.



2,452,396

GRIP ATTACHMENT FOR VIOLIN BOWS

Leopold Shopmaker, Kansas City, Kans.

Application October 15, 1945, Serial No. 622,264
6 Claims. (Cl. 84—282)

1. A grip attachment for violin bows comprising a substantially semi-circular hand gripping member having a tangential planar section; an angled guard at the forward edge of said planar section; a resilient finger loop pivotally and adjustably mounted on the inner wall of said guard, whereby as said grip attachment is gripped by the operator with his forefinger extended through

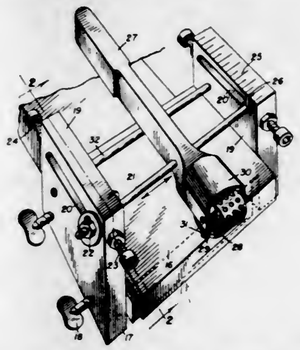
said finger loop, his thumb and fingers will be held in proper relative relation for holding the violin bow.

2,452,397

SMOKING PIPE

John C. Shotton, Lakewood, Ohio

Application January 10, 1946, Serial No. 640,176
1 Claim. (Cl. 131—172)



The process of making a pipe which consists in forming a pipe stem and providing the same with a bore extending therethrough adapted to register with the bore of a bowl stem; fitting upon the outer end of the pipe stem an extension having a substantially frusto-conical interior, the outer end of such interior being of greater internal diameter than its inner end and adapted to receive therewithin a bowl stem; providing said extension with an abrasive liner; inserting within the said liner the stem of a pipe bowl having a bore therethrough; imparting relative rotary movement between the bowl stem and the pipe stem thereby to provide the end of the bowl stem with a substantially frusto-conical tapered surface adapted to form a close connection with the interior surface of the said extension; removing the liner from said extension; and fitting the said extension upon the tapered end of the bowl stem.

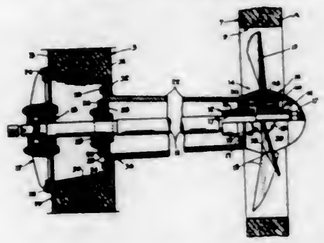
2,452,398

GRINDING WHEEL DRESSER

Adolph Smith, New Orleans, La.

Application December 4, 1946, Serial No. 714,110
2 Claims. (Cl. 125—37)

1. A grinding wheel dressing device comprising a table, means securing the table in position adjacent the periphery of a grinding wheel, a transverse bar carried by the table, a handle slidable on the bar and pivoted thereon for vertical swinging movement, a dressing wheel journaled on the



front end of the handle for contact with the periphery of the grinding wheel, said transverse bar being adjustable forwardly and rearwardly on the table to move the dressing wheel toward or away from the grinding wheel, and indicating means carried by the transverse bar.

2,452,399

STOCK AGITATING AND CIRCULATING ATTACHMENT FOR STOCK TANKS USED IN PULP AND PAPER MILLS

John Stadler, Montreal, Quebec, Canada

Application July 9, 1945, Serial No. 603,948
3 Claims. (Cl. 259—109)

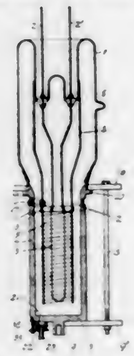
1. A stock propelling attachment for pulp stock tanks of the character described comprising a tapered, tubular member open at both ends and adapted to be fitted in an opening in the wall of the tank with the smaller end of the tubular member directed inwardly, an inwardly directed flange at the inner end of said tubular member, an outwardly directed flange at the outer end of said tubular member, an elongated tubular shaft housing provided with inwardly directed flanges at both ends and with an outwardly directed flange at one end, the last mentioned flange of the shaft housing being detachably secured to the outer side of the inwardly directed flange of said tubular member, a shaft bearing detachably secured to the inwardly directed flange at the free end of said shaft housing, a stuffing box detachably secured to the inwardly directed flange at the opposite end of the shaft housing, a spider detachably secured to the outwardly directed flange of said tubular member, a bearing supported by said spider in alignment with the first mentioned bearing and the stuffing box, a propeller shaft extending through said bearings and stuffing box and a propeller mounted on an end portion of the shaft projecting beyond the free end of the shaft housing.

2,452,400

HAIRPIN HOLDER

Adolph K. Stevens, Buffalo, N. Y.

Application October 28, 1946, Serial No. 706,173
11 Claims. (Cl. 132—9)



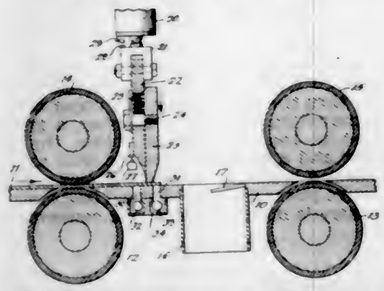
1. A holder for hair pins comprising a cup-shaped element of non-magnetic material, an upright permanent magnet disposed along the inside side wall of said cup and confined thereto with one pole adjacent the open face of the element and the other pole adjacent the bottom of said element, and a member attached to said cup and depending therefrom, by which the cup may be supported.

2,452,401

METHOD OF REGENERATION OF ELECTRON DISCHARGE DEVICES

Jiří Stivín, Rychnov, Czechoslovakia

Application July 3, 1947, Serial No. 758,857
In Czechoslovakia August 5, 1946
7 Claims. (Cl. 316—2)



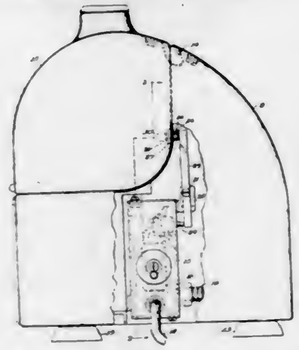
1. In a method for regeneration of electronic discharge devices, the outer vessel including a metal portion in combination, the steps of severing the said metal portion of said outer vessel so as to gain access to the interior of the discharge device; and then after performing work on the interior parts of the discharge device reconnecting the said severed portions of the outer vessel by forcing annular knife edges of a sealing ring made of a material harder than the material of said metal portion into the surfaces of said severed portions.

2,452,402

TRIMMING APPARATUS

Jack W. Stringe, Oak Park, Ill.

Application March 6, 1947, Serial No. 732,716
8 Claims. (Cl. 164—49)



8. In trimming apparatus, a bed having a pair of spaced slots therethrough, photo-electric cells below said bed in alignment with said slots, a knife supported above said bed for movement toward the same to sever a sheet advancing thereon, a solenoid connected with said knife for operating the same, means for advancing a sheet along said bed, a solenoid-controlled clutch controlling the operation of said advancing means, and relay connections between said photo-electric cells and said solenoids whereby, upon the closing of the slots above both of said electric cells, said knife solenoid is set into operation for severing the forward edge of said sheet while disconnecting said clutch, and means actuated by the downward movement of said knife for conditioning said relays whereby, upon the uncovering of the first of said photo-electric cells by the sheet being advanced thereover, said knife solenoid is again actuated for the severing of the rear edge portion of said sheet.

2,452,403

SWITCH CONTROL MECHANISM FOR MEAT TENDERING APPARATUS

Hendrik Stukart, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana

Application October 27, 1943, Serial No. 507,800
10 Claims. (Cl. 200—50)

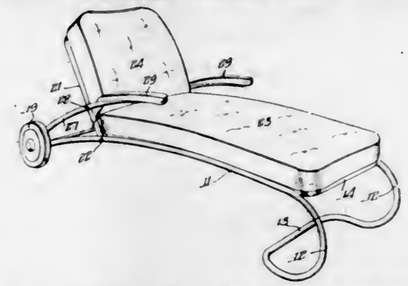
1. In a meat tendering machine having a source of power, a base, a cover and a safety switch, means for operating said safety switch to disconnect the source of power when the cover is opened, said means including a manually operable member adapted to render said switch operating means functionally ineffective, and means controlled by the closing of the cover to return said operable member to original position.

2,452,404

MANUFACTURE OF PHENOLS OR SALTS THEREOF

Daniel Tyrer, Stockton-on-Tees, England

No Drawing. Application April 25, 1946, Serial No. 664,977. In Great Britain September 4, 1942
6 Claims. (Cl. 260—628)



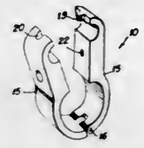
1. A process for the manufacture of phenols or salts thereof which comprises, preparing an intimate solid mixture of an alkali metal salt of the sulphonic acid corresponding to the phenol desired, a caustic alkali in substantially the theoretical quantity and an additional particulate solid substance selected from the group consisting of the normal alkali metal salts of sulphurous acid and of sulphuric acid in such proportion, comprising at least 2 per cent. to about 30 per cent. of the weight of the sulphonic acid salt, that during the subsequent heating operating the reaction mixture does not froth or swell and remains in a substantially solid condition, and then heating the said solid mixture at a temperature ranging from 350 to 400° C. to cause the sulphonic acid salt and caustic alkali to undergo reaction.

2,452,405

CHAISE LONGUE

William W. Vincent, Jr., Kenosha, Wis., assignor to The Vincent-McCall Company, Kenosha, Wis., a corporation of Wisconsin

Application December 12, 1946, Serial No. 715,778
1 Claim. (Cl. 155—112)

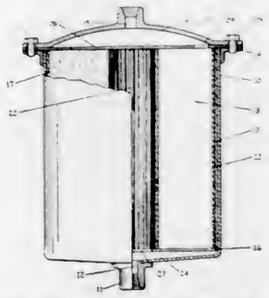


In a known type of chaise-longue having a main-body, a back rockingly-mounted on said main-body for inclination adjustment, and means to lock said back releasably in different positions of adjustment, the novel improvement that said locking-means includes the combination of a pair of longitudinal spaced-apart arm-rest supporting-bars, means hinging said bars at points intermediate their ends on said back, and a plurality of downwardly releasable locking-means partially on the rear portion of said main-body and partially on the rear portions of said bars maintaining the back in any one of a plurality of adjusted positions, the temporary lifting and lowering of the forward portions of said arm-rest bars by the occupant of the chaise-longue rendering said locking-means temporarily inactive permitting adjustment of said back, said releasable locking-means on the rear portion of said main-body being a pair of loops in which said bars are slidable, said loops having apertures and said bars having projecting pins adapted to individually occupy said apertures to lock the back in different positions of adjustment.

2,452,406

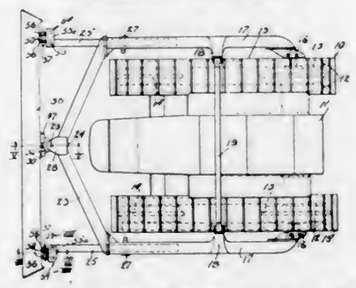
TWO-PART, SCREW-CONNECTED CLAMP

Bernhard Volkery and John Koslowski, Shrub Oak, N. Y.



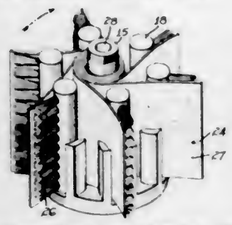
Application December 2, 1947, Serial No. 789,184
2 Claims. (Cl. 24—81)

2. A clamp comprising a pair of half-sections hingedly connected together at one end and each including in its intermediate portion an inwardly projecting shoulder and including an inwardly opening recess at each terminal portion, an elongated fastening element penetrating holes in the shoulders and cooperating therewith for releasably holding the shoulders in mutually abutting relation so that each opposed pair of recesses forms a substantially closed opening adapted to hold a rod, rope or the like, in combination with a cooperating tongue and groove provided on the extreme ends of the respective half-sections opposite the hinged ends thereof for in-



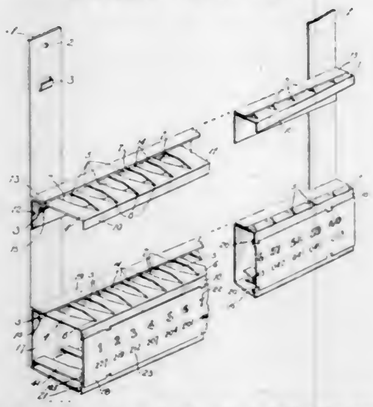
terfitting to align the holes to receive the elongated fastening element and prevent lateral displacement of the half-sections and for assisting in maintaining the adjacent recess sufficiently closed to prevent loss of the contained rod, rope or the like upon the fastening element becoming loose and the half-sections hinging to angularly parted relation.

2,452,407
FILTER
Earl C. Walker, Altadena, Calif.
Application January 12, 1945, Serial No. 572,471
6 Claims. (Cl. 210—169)



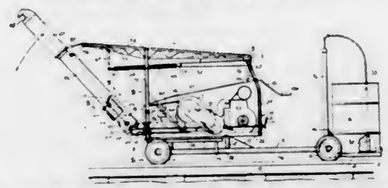
1. A filtering unit comprising: a plurality of filtering cells each of sectoral cross-section and open at their axial ends, said cells being grouped about a common center to form compositely an annular open-ended cylinder, the side walls of said filtering cells extending radially and disposed in mutually supported relation to resist the force of fluid under pressure within said cells; means forming interstitial drainage passages communicating with the inner and outer peripheries of said cylinder; headers common to said cells and sealed to the otherwise open axial extremities thereof, one of said headers defining an opening communicating with the center of said cylinder, the other having openings communicating with the interiors of said cells.

2,452,408
GRADE BUILDER BLADE MOUNTING
Harry H. Washbond, Springfield, Ill., assignor to The Baker Manufacturing Company, Springfield, Ill., a corporation of Illinois
Application November 29, 1943, Serial No. 512,187
17 Claims. (Cl. 37—144)



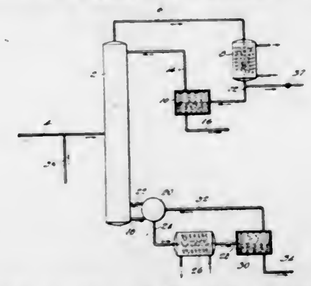
12. In a bulldozer, the combination of: a U-shaped supporting frame, having a vertical hole in the center of the U; a blade, having two undercut arcuate recesses facing each other on the rear face thereof; an attaching member having a flat vertical plate portion, opposite edges of which are designed to register loosely with said two recesses respectively, and having at least one rearwardly projecting lug with a vertical hole therein to register with the vertical hole in the U; and a pin for insertion in these holes.

2,452,409
ROTARY ABRADING DEVICE
Wiley W. Wickman, Los Angeles, Calif.
Application January 3, 1947, Serial No. 720,051
8 Claims. (Cl. 51—194)



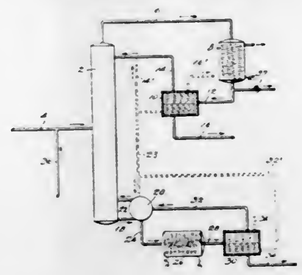
1. In a rotary abrading device, the combination of: spaced end members connected by a central axial member, a plurality of spacers positioned at intervals around the central member and extending between the end members, abutments provided on at least one of the end members extending adjacent said spacers, a plurality of abrasive strips encircling the central member and each having an end thereof extending outwardly between one of the spacers and the adjacent abutment, and means on the end members for moving the spacers radially outwardly to clamp the abrasive strips between the spacers and the abutments.

2,452,410
DRILL ROD RACK
Otto Wiegel, Chicago, Ill.
Application September 6, 1945, Serial No. 614,773
6 Claims. (Cl. 211—87)



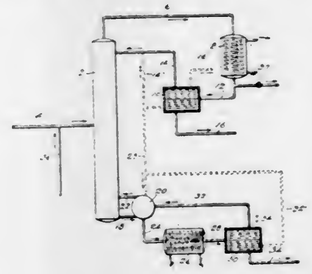
2. In a rod rack, a shelf plate uniformly tapered in width from end to end and having therein a longitudinal series of spaced apertures of like-tapered form with respect to an axis transverse to the plate, the narrow ends of such apertures being uniformly spaced inward from the front edge of said plate and the sides of said apertures extending to the rear edge of the plate, whereby the apertures of the series are graded as to areas by the slant of the rear edge of the plate, a vertically disposed rear panel having a top flange overlapping and connected to said plate, and a bottom panel extending horizontally across the vertically projected areas of said apertures.

2,452,411
WEED BURNER
Horace E. Woolery, St. Paul, Minn.; Myra Lillian Woolery, executrix of said Horace E. Woolery, deceased, assignor to Woolery Machine Company, Minneapolis, Minn., a corporation of Minnesota
Application May 14, 1943, Serial No. 486,973
12 Claims. (Cl. 126—271.2)



1. In an apparatus of the character described and including a supporting platform, a frame pivotally supported at one end on the platform for horizontal swinging movements at its other end with respect to the platform, a substantially semi-circular track supported on the platform beneath the swinging end of the frame and centered about the pivot axis upon which the frame swings, wheels on the frame adapted to travel along said track as the frame swings, selectively applicable brake means on the frame and operative when applied to bear downwardly on the track and elevate the wheels clear of the track, and a flame projector on the frame and movable therewith.

2,452,412
CONCENTRATING AND REFINING FORMALDEHYDE SOLUTIONS BY DISTILLATION WITH HYDROCARBONS
Soon Y. Wong, Pawhuska, Okla., assignor to Skelly Oil Company, Tulsa, Okla., a corporation of Delaware
Application July 27, 1945, Serial No. 607,461
15 Claims. (Cl. 202—42)

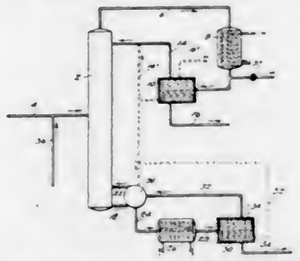


1. In a process of refining and concentrating dilute aqueous solutions of formaldehyde, the steps of distilling, at a temperature in excess of 100° C., said dilute aqueous solutions together with a normally liquid hydrocarbon having from about 6 to about 15 carbon atoms per molecule, and collecting the overhead formaldehyde vapors and condensing them as formaldehyde solution of greater concentration than that of said dilute aqueous solutions.

2,452,413
CONCENTRATING AND REFINING FORMALDEHYDE SOLUTIONS BY DISTILLATION WITH HALOGENATED HYDROCARBONS
Soon Y. Wong, Pawhuska, Okla., assignor to Skelly Oil Company, Tulsa, Okla., a corporation of Delaware
Application July 27, 1945, Serial No. 607,462
16 Claims. (Cl. 202—42)

1. In a process of refining and concentrating dilute aqueous solutions of formaldehyde, the steps of distiling, at a temperature in excess of 100° C., said dilute aqueous solutions together with a halogenated hydrocarbon having a boiling point of about 70° C. to about 300° C., and capable of forming a heterogeneous azeotrope with water, collecting the overhead formaldehyde vapors and condensing them as formaldehyde solution of greater concentration than that of said dilute aqueous solutions.

2,452,414
CONCENTRATING AND REFINING FORMALDEHYDE SOLUTIONS BY DISTILLATION WITH OXYGENATED HYDROCARBON DERIVATIVES
Soon Y. Wong, Pawhuska, Okla., assignor to Skelly Oil Company, Tulsa, Okla., a corporation of Delaware
Application July 27, 1945, Serial No. 607,463
16 Claims. (Cl. 202—42)



1. In a process of refining and concentrating dilute aqueous solutions of formaldehyde, the steps of distilling, at a temperature in excess of 100° C., said dilute aqueous solutions together with an oxygen-containing hydrocarbon derivative boiling between about 70° C. and 300° C., substantially insoluble in water but capable of forming a heterogeneous azeotrope therewith, and collecting the overhead formaldehyde vapors and condensing them as formaldehyde solution of greater concentration than that of said dilute aqueous solutions.

2,452,415

CONCENTRATING AND REFINING FORMALDEHYDE SOLUTIONS BY DISTILLATION WITH HYDROCARBON DERIVATIVES CONTAINING NITROGEN AND OXYGEN

Soon Y. Wong, Pawhuska, Okla., assignor to Skelly Oil Company, Tulsa, Okla., a corporation of Delaware

Application July 27, 1945, Serial No. 607,464
16 Claims. (Cl. 202—42)

1. In a process of refining and concentrating dilute aqueous solutions of formadehyde, the steps of distilling, at a temperature in excess of 100° C., said dilute aqueous solutions together with a hydrocarbon derivative containing nitrogen and oxygen boiling between about 70° C. and about 300° C., substantially insoluble in water but capable of forming a heterogeneous azeotrope therewith, collecting the overhead formaldehyde vapors, and condensing them as formaldehyde solution of greater concentration than that of said dilute aqueous solutions.

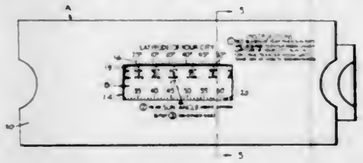
2,452,416

PROCESS OF MAKING DIMETHYL SILICONE PRODUCTS

James G. E. Wright, Alplaus, N. Y., assignor to General Electric Company, a corporation of New York

No Drawing. Application April 26, 1944, Serial No. 532,879
8 Claims. (Cl. 260—448.2)

1. The process of hydrolyzing a liquid dimethyldihalogenosilane which comprises (1) pouring the said dimethyldihalogenosilane onto a hydrolysis medium consisting of a finely-divided, solid, inorganic compound selected from the class consisting of hydrated inorganic salts in which the anion is unpolymerized, and metal hydroxides other than the hydroxides of the alkali and alkaline-earth metals, thereby to produce an aqueous phase and an oily phase containing the methylpolysiloxane hydrolysis product, and (2) recovering the methylpolysiloxane hydrolysis product.



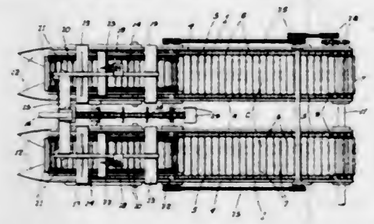
2,452,417

METHOD AND APPARATUS FOR USE IN DESIGNING SOLAR HOUSES

William A. Zentis, Chicago, Ill., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio

Application December 13, 1946, Serial No. 715,920
3 Claims. (Cl. 235—70)

1. In a slide rule type calculating device, a fixed member and a sliding member, means on one part of said fixed member and on one part of said sliding member for determining the sun angle for a given latitude at a given season comprising, markings on said fixed member designating degrees of latitude, an indicating device also on said fixed member, markings on said sliding member designating seasons of the year and positioned to register with the said markings on the fixed member, and other markings on said sliding member designating degrees of sun angle positioned to register with said indicating device on the fixed member, the lines of each of said sets of mark



ings being spaced to establish the various seasons in ratio to the declination of the earth's axis at the corresponding seasons of the year and arranged relative to the other markings to indicate the correct sun angle when a selected season marking is set at a fixed point.

2,452,418

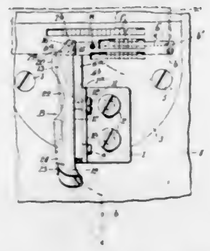
BEET DIGGER

Roscoe C. Zuckerman, Stockton, Calif.

Application May 29, 1944, Serial No. 537,794
5 Claims. (Cl. 55—138)

1. A two-row beet digger comprising a wheel mounted frame, a pair of transversely spaced beet lifting plows carried by the frame, means on the frame and connected with the plows to lower them into the earth whereby with a forward movement of the frame such plows will move in digging relation with the earth about the beets whereby to lift such beets, means carried by the frame and associated with the plows to carry the lifted beets to a point of discharge, an earth moving instrumentality carried by the frame and disposed between the plows and immediately adjacent the ground level and being operable to engage earth loosened by the plows and drag and spread it along the ground surface in a direction opposite to the direction of travel of the plows.

2,452,419



STRIP REVERSING BINDER FOR SEWING MACHINES

James E. Ackerman, Devon, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application June 12, 1945, Serial No. 599,046
6 Claims. (Cl. 112—138)

1. A binding attachment for sewing machines comprising, a supporting bracket; an individually formed solid core member adjustably mounted on said bracket and having a laterally projecting center-fold-forming rib; an individually formed strip folder element secured to one face of said core member and having a flat body wall provided with an aperture through which said center-fold-forming rib projects, said element having strip guiding flanges and strip-margin folding means;

and an individually formed tongue member having a portion of substantially C-shape in cross section located between said center-fold-forming rib and the strip-margin folding means to form a strip passageway of substantially W-shape in

cross-section, said center-fold-forming rib affording, adjacent said passageway, a U-shaped strip-inverting edge about which the folded strip is passed, and a rearwardly extending channel for passage of the folded and inverted strip.

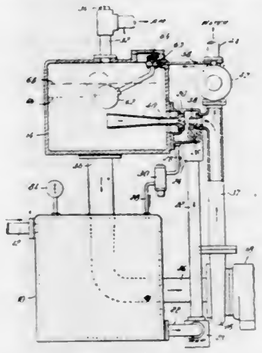
2,452,420

PHENOL-ALDEHYDE MOLDING COMPOSITIONS

John Allan, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application October 28, 1944, Serial No. 560,915. In Great Britain September 7, 1943
2 Claims. (Cl. 260—38)

1. Process for the production of moulding stock suitable for the preparation of mouldings of high resistance to alkaline solutions and of high impact strength, which comprises healing phenol and acetaldehyde in approximately equimolecular proportions in the presence of an acid catalyst to obtain a thermo-setting condensation product, dissolving said condensation product in a volatile solvent, mixing into said condensation product solution fibrous asbestos, a mould lubricant, and hexamethylenetetramine in an amount capable of providing not substantially less than one molecular proportion of formaldehyde per molecular proportion of phenol that has gone into the production of said condensation product, removing the bulk of said volatile solvent by evaporation under reduced pressure until the composition contains about 5% of its weight of the solvent, disintegrating the remaining composition into a fibrous mass and then removing the residual solvent from said fibrous mass by further evaporation under reduced pressure.



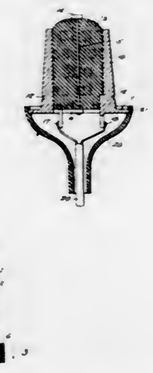
2,452,421

VACUUM RETURN PUMPING UNIT

Charles F. Ames, New York, N. Y.

Application September 29, 1945, Serial No. 619,291
8 Claims. (Cl. 103—5)

1. In a vacuum producing apparatus of the type described, which includes a vacuum chamber, a centrifugal pump, an ejector, and a sealing chamber into which the ejector discharges, the pump being arranged to draw liquid from the sealing chamber and supply it under pressure to the ejector, and the ejector being connected to the vacuum chamber to draw liquid and gas therefrom, the improvement which comprises separate means for conducting and controlling the flow of gas from the vacuum chamber to the ejector including a flow control valve and a check valve, means for discharging liquid from the outlet of said pump including a diaphragm controlled valve, and means for controlling the move-

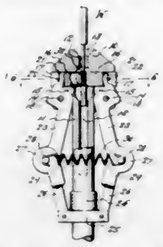


ment of the diaphragm of said valve in response to changes in the liquid level in the sealing chamber.

2,452,422

ELECTRICAL CONNECTOR

Cecil L. Basham, Athens, Ga.



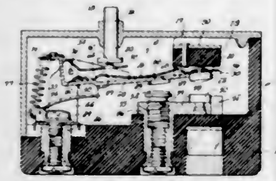
Application April 4, 1946, Serial No. 659,462
1 Claim. (Cl. 173—343)

An electrical connector including interlocking male and female units, the female unit comprising a hollow casing of electrically conductive material exteriorly formed, substantially throughout its length, for detachable engagement in an outlet receptacle, the inner surface of the casing being tapered, a head of insulating material permanently connected to one end of the casing, a spring contact within the head and extending from opposite ends thereof, and opposed V-shaped springs in the casing having their parts normally projecting into the hollow interior thereof, the male unit comprising a hollow casing of conductive material tapered exteriorly for insertion in the female unit, insulating material filling the interior of the casing of the male unit, and a conductor within the insulating material and extending from end to end thereof, said conductor being engageable with the spring contact of the female unit, there being short opposed grooves formed in and extending circumferentially of the

casing of the male unit in which the V-shaped springs are engageable, whereby to lock the male to the female unit by relative rotation of said units.

2,452,423
TOOL FOR REMOVING WIRE INSULATION
Arthur P. Bass, Newark, N. J.
Application October 10, 1945, Serial No. 621,471
8 Claims. (Cl. 15—93)

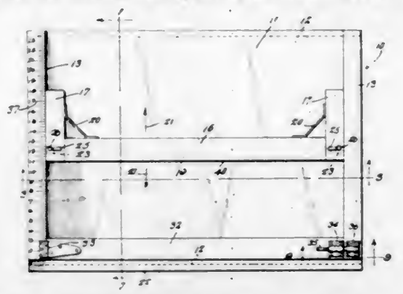
7. In a tool for the purposes described, a head member having an axial shank, said head member and shank being adapted to be rotated about the longitudinal axis thereof, said head member and shank having an axial wire receiving bore and diametrically aligned slideway passages radial to said bore, opposed tool members slidably mounted in said slideway passages, a primary lever member for each tool member pivotally connected with said head member adjacently below said slideway passages, each primary lever comprising an upper arm and a lower arm, said upper arm terminating in a cam finger cooperative with the tool member served thereby for moving the latter into and out of operative engagement with a wire inserted in said bore, a cross-head slidably mounted on the shank of said head member, secondary lever members respectively pivoted to the ends of said cross-head, weighty knuckle connections to pivotally interconnect corresponding secondary lever members and the lower arms of said primary lever members, whereby said connected lever members are adapted to respond to centrifugal force for movement in direction to advance the tool members served thereby into operative wire engaging positions, and spring means connected between the joined ends of said primary and secondary lever member sets whereby to retract the same and the tool members served thereby to normal initial positions when rotation of said head member is interrupted.



2,452,424
WICK HOLDER FOR EVAPORATORS
Morris Bell, New York, N. Y., assignor to Seeman Bros., Inc., New York, N. Y., a corporation of New York
Application August 3, 1945, Serial No. 608,721
2 Claims. (Cl. 299—20)

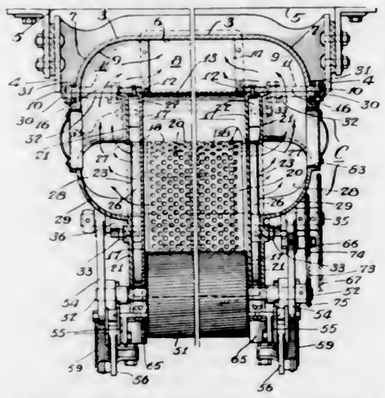
1. A wick holder for use in an evaporator and air freshening device of the type which comprises an absorptive wick partially folded upon itself and partially immersed in an air freshening and deodorizing fluid in a closable container with a restricted opening and adapted to be partially withdrawn therefrom by such holder for use, said wick-holder comprising a single piece of resilient material bent upon itself to provide, a loop positionable within the container opening for grasping by the fingers to withdraw the wick, a seat for supporting the folded part of the wick, and legs for frictional engagement with the walls of the container opening, the latter holding the withdrawn wick in desired position, and means

for positively attaching the wick to the wick holder.



2,452,425
SWITCH
George H. Berkholder, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application January 5, 1946, Serial No. 639,334
6 Claims. (Cl. 200—67)

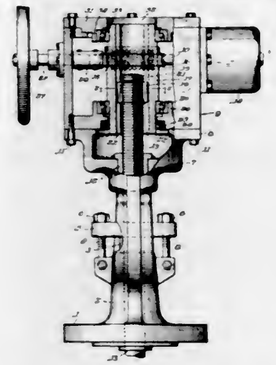
1. In a snap switch, in combination, a stationary contact, a movable contact arm, a spring blade carrying a movable contact on said arm for engaging said stationary contact, means for moving said movable contact into engagement with said stationary contact with a snap action, and means independent of said contacts for stopping said arm on movement in a contact closing direction, said spring blade being secured to said arm at one point and formed to bias the remote end thereof into engagement with said arm adjacent said movable contact, and slidably engaging said arm at a third point intermediate the first and second points.



2,452,426
HOLDER FOR SHEET MATERIAL
Edward C. Blaske, Wellsville, N. Y.
Application December 6, 1946, Serial No. 714,606
4 Claims. (Cl. 164—79)

4. A holder for sheet material comprising in combination, a flat, elevated bed, a pair of parallel guides secured at the side edges of said bed, the opposed faces of said guides being formed with a pair of longitudinally extending channels, a substantially U-shaped gauging member slidable between said guides, the side arms of said member engaging said channels, a pair of locking cams rotatably mounted in said side arms and adapted to releasably engage said guides, externally operable means for actuating said cams, a clamping strip hingedly connected at one end thereof to one of said guides, a slidable lock bolt

at the remaining end of said strip, and an eye provided on the remaining guide, said bolt being engageable with said eye.



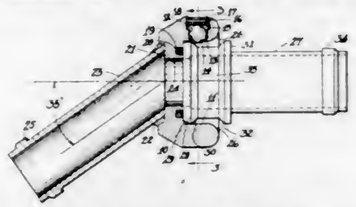
2,452,427
CONDENSER
William F. Bokum, Jenkintown, Pa., assignor to Proctor & Schwartz, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application March 7, 1946, Serial No. 652,716
12 Claims. (Cl. 19—75)

1. A fibrous stock condenser comprising a hollow cylindrical rotary screen drum having an open end affording communication with the interior of the drum, a stock chamber including a stock retaining wall having a circular opening of greater diameter than said drum through which the open end of the drum projects beyond said stock retaining wall, and an exhaust chamber including a defining wall spaced from said stock retaining wall with a free air space therebetween and provided with a communicating port in registry with said open end of said drum.

2,452,428
FLEXIBLE VALVE STEM DRIVE
Corwin W. Bryant, Downers Grove, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application August 30, 1945, Serial No. 613,579
1 Claim. (Cl. 74—504)

In a valve actuating mechanism, a combination comprising a housing, a valve bonnet cooperating with the said housing, a valve stem suitable for rotative and reciprocating movement relative to the said housing and said bonnet, a sleeve snugly journaled for rotative movement in the said housing and surrounding a portion of the said valve stem, the said stem being closely journaled for rotative and longitudinal movement in the said valve bonnet, driving means for rotating the said sleeve, a flat plate member serving as the driving connection between the said sleeve and the said stem, the said flat plate member extending diametrically across the upper end of the said stem and being relatively loosely carried in a transverse slotted opening extending

through the longitudinal axis of the said stem at the upper end portion thereof, the said flat plate member being smaller in thickness than the width of the slotted opening of the stem and also being smaller than the height of the said slotted opening, the said sleeve having diametrically disposed longitudinally extending slots to receive projecting end portions of the said flat plate member, the slots being of greater width than the thickness of the said flat plate member, and the distance between the bottoms of the said slots in the sleeve being greater than the length of the said flat plate member.



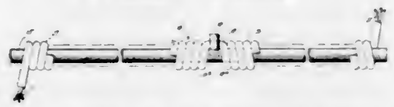
2,452,429
FUNGICIDAL COMPOSITIONS
Paul J. Carlisle, Wilmington, Del., and Wilbie S. Hinegardner, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 2, 1945,
Serial No. 591,634
7 Claims. (Cl. 167—22)

1. A fungicidal composition comprising a mixture of paraformaldehyde and a chlorine derivative of trimethyl acetonitrile having the formula $C_4H_{(9-x)}Cl_x—CN$, where $x=1$ to 3.

2,452,430
QUICK DISCONNECT COUPLING
David M. Clark, Worcester, Mass., and George A. Hallenbeck, Rochester, Minn.; said Hallenbeck assignor to said Clark
Application January 17, 1947, Serial No. 722,550
6 Claims. (Cl. 285—97.3)

1. A coupling device comprising, an outer body member having a shouldered longitudinal bore therein, an inner body member adapted to enter said bore, a circumferential flange formed about the inner end portion of said inner body member, said inner body member having an outside diameter substantially less in size than that of said

bore thereby to form a clearance space therebetween, and a spring biased member carried by said outer body member and normally positioned against said flange thereby to bias said inner body member against the shoulder portion of said



bore, said clearance space affording radial clearance of such magnitude as to permit the removal of said inner body member from said outer body member by a sidewise thrust exerted upon said inner body member at a point remote from said circumferential flange.

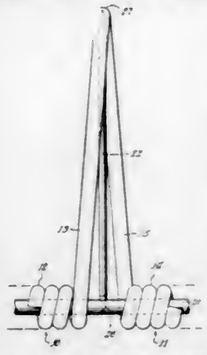
2,452,431

PRODUCTION OF VULCANIZABLE ELASTIC COIL CABLES HAVING REVERSINGLY COILED PORTIONS

Ralph D. Collins, Beverly Hills, Calif., and William J. Drigot, Chicago, Ill.; said Drigot assignor to Kellogg Switchboard and Supply Company, a corporation of Illinois

Application February 9, 1945, Serial No. 577,110
2 Claims. (Cl. 18—48)

2. The method of production of elastic coil structures characterized by the steps of: providing a flexible cord-like member comprising a cable portion of vulcanizable material, helically coiling respective portions of the member in opposite directions simultaneously each upon one of a plurality of parallel mandrels, vulcanizing the material while the member is still coiled upon the mandrels, removing the member from the mandrels, and subsequently reversing the direction of pitch of each coiled portion whereby the member has portions helically coiled in opposite directions and each portion is reversed in direction from that in which it was initially coiled and vulcanized.



2,452,432

METHOD OF MAKING ELASTIC COIL STRUCTURES WITH UNCOILED ENDS

Ralph D. Collins, Beverly Hills, Calif., assignor of one-half to Kellogg Switchboard and Supply Company, a corporation of Illinois

Application February 9, 1945, Serial No. 577,111
2 Claims. (Cl. 18—6)

1. The method of making elastic coil structures with uncoiled ends, embodying a cord-like member including a vulcanizable material, which is characterized by the steps of forming a portion of the member into a coil, providing another portion of the member uncoiled, said uncoiled portion being provided by forming a hump in the member comprising a pair of legs, one leg extending integrally away from the coil and the other leg extending back toward the coil with a bight between said legs, holding the legs so extended to prevent coiling of the uncoiled portion and uncoiling of the coiled portion, vulcanizing the material while maintaining said coiled and

uncoiled portions in said forms, and severing said hump adjacent said bight.

2,452,433

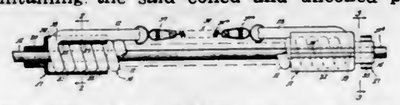
METHOD AND APPARATUS FOR MAKING ELASTIC COIL CABLES WITH LONGITUDINAL ENDS

Ralph D. Collins, Beverly Hills, Calif., assignor of one-half to Kellogg Switchboard and Supply Company, a corporation of Illinois

Application April 12, 1945, Serial No. 588,043
2 Claims. (Cl. 18—6)

2. Means for making elastic coil cables with uncoiled ends embodying a vulcanizable material, comprising a mandrel for coiling a portion of the cable thereon in the form of a helix when the vulcanizable material thereof is incompletely vulcanized, and support means carried by the mandrel for supporting an uncoiled portion of the cable spaced from and in a direction lappingly of the coiled portion, said means preventing the uncoiling of said coiled portion and the coiling of said uncoiled portion during subsequent vulcanization of the material on the mandrel, whereby to form a coiled structure having an uncoiled end of predetermined formation, wherein the last mentioned means includes a curvilinear guide formation accommodating the bight of the cable between the coiled and uncoiled portions to avoid marking the cable at said bight.

2,452,434



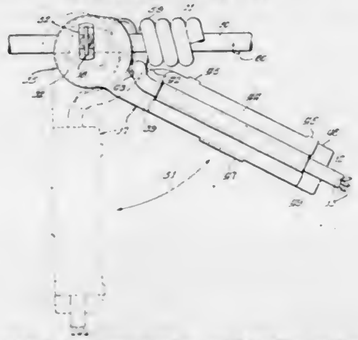
APPARATUS FOR MAKING ELASTIC COIL STRUCTURES WITH LONGITUDINAL ENDS

William J. Crehan, Chicago, and Ralph J. Arnold, Western Springs, Ill., assignors, by mesne assignments, to Kellogg Switchboard and Supply Company, Chicago, Ill., a corporation of Illinois, and Ralph D. Collins, Beverly Hills, Calif.

Application May 7, 1945, Serial No. 592,398
5 Claims. (Cl. 18—6)

5. The method of making elastic coil structures with longitudinal ends which is characterized by the steps of encasing a conductor in a sheath of vulcanizable material to form a cable, forming a portion of the cable into a coil, forming other portions of the cable at each end uncoiled and

extending longitudinally of the coil, connecting the said uncoiled portions together during vulcanization to hold them longitudinal and lapping the coil, vulcanizing the material while maintaining the said coiled and uncoiled por-



tions in said forms, and inverting the direction of pitch of the coils whereby the uncoiled portions extend longitudinally beyond the coil after reversal and serve as connecting tails for the cable.

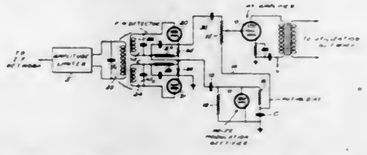
2,452,435

APPARATUS FOR PRODUCING ELASTIC COILS WITH CONNECTING TAILS

Ralph J. Arnold, Western Springs, Ill., and William D. MacDonald, Santa Monica, and Ralph D. Collins, Beverly Hills, Calif., assignors, by mesne assignments, of one-half to Kellogg Switchboard and Supply Company, Chicago, Ill., a corporation of Illinois, and one-half to Ralph D. Collins, Beverly Hills, Calif.

Application August 8, 1945, Serial No. 609,686
6 Claims. (Cl. 18—6)

4. Means for production of elastic coil cables embodying a vulcanizable material and for use with a mandrel for coiling the cable thereon during vulcanization of the material, embodying, a clamp member, comprising, a mandrel engaging part including a U-shape base adapted to receive the mandrel therein, a cable carrying part arranged to clamp an uncoiled cable portion thereto, said cable carrying part including a knuckle element and an arm element, said knuckle element being secured to the base, and a clamping screw passing through said knuckle element and a leg of the base to which the knuckle element is attached for engagement with the mandrel, wherein the knuckle element is pivoted to said leg on the shank of said screw and there is a spring interposed between the head of the screw and the knuckle element to create friction therebetween to yieldingly permit swinging of the cable carrying part with respect to the mandrel engaging part.



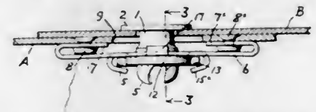
2,452,436

RECEIVER MUTING CIRCUIT

Murray G. Crosby, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application July 1, 1943, Serial No. 493,052
1 Claim. (Cl. 250—20)

In combination with a pair of opposed diode rectifiers having a common frequency discriminator input circuit, each of said rectifiers having a pair of series-connected load resistors across which rectified signal voltages are developed in response to frequency variations of signal energy at said input circuit, a common output circuit including a predetermined one of each said pair of said resistors in series relation, an amplifier having an input connection to a point of said output circuit at which said rectified voltages are combined in polarity opposition, a third diode rectifier having an input connection, said input



connection being made to a point on one of the rectifiers to apply to the third rectifier the total rectified voltages of like polarity across the second load resistor of said one rectifier and across the said predetermined one resistor of the second rectifier whereby voltage representative of amplitude modulation of said signal energy is applied to said third rectifier in response to the signal energy to noise energy ratio decreasing to a predetermined magnitude, and means responsive to rectified voltage derived from the third rectifier for rendering said amplifier ineffective.

2,452,437

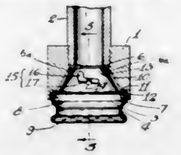
FASTENING DEVICE

Edmond C. Crowther, Philadelphia, Pa.

Application November 3, 1943, Serial No. 508,788
4 Claims. (Cl. 24—221.2)

1. A keeper for a stud of a fastening device having spiral slots and a head, comprising a flat spring having a body portion, a tab extending from each of the opposite ends of the body adapted to be secured to a base to which a member is to be secured by the stud through which it passes, there being a central aperture in the body of greater diameter than the stud bounded by an annular flange, said flange having diametrically opposite recesses, a non-resilient bar mounted in said recesses spanning the aperture arranged to be engaged by the spiral slots in the stud for drawing the member to be secured against the base by the head thereof, and projections extending from the body of the spring for retaining the bar in position in the flange.

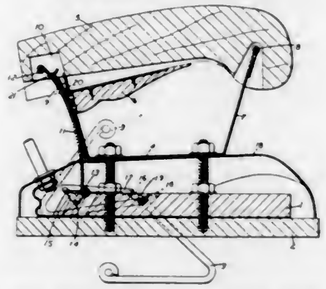
2,452,438



MOUNTING FOR INVERTED INCANDESCENT MANTLES

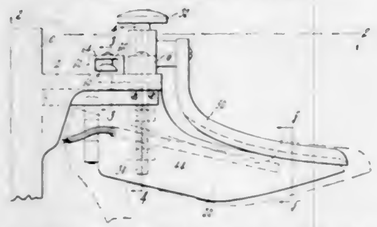
Cortland W. Davis, Summitville, Ind., assignor to The Mantle Lamp Company of America, Chicago, Ill., a corporation of Illinois

Application December 17, 1945, Serial No. 635,561
5 Claims. (Cl. 67—101)



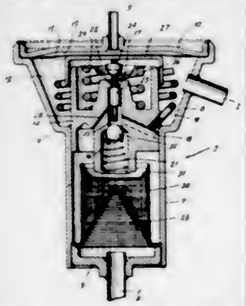
3. Means for supporting an inverted incandescent mantle on a burner head having an upwardly converging conical bore in its lower portion and an annular seat extending outwardly from the

lower end of said bore and having locking pins extending into said bore, said burner head also having a tubular extension projecting downwardly from the outer edge of said seat, which mantle supporting means is characterized by and comprises a mantle mounting of sheet metal having an upper portion of a shape corresponding to said bore and also having at the lower end of its upper portion an outwardly extending annular portion for engaging said seat, the upper portion of said



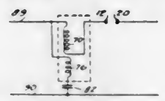
mantle mounting having locking slots for engaging said pins to hold said mantle mounting in tight engagement with said seat, the upper portion of said mantle mounting being somewhat smaller laterally than said bore to leave a small clearance space between said upper portion and said bore, said mantle mounting below and from the outer edge of its said annular portion, having a cylindrical portion of an external diameter to fit said tubular extension to center said mantle mounting in said bore.

2,452,439
SUPPORTING STAND FOR FLATIRONS
Helen Craig Davis, London, England
Application April 23, 1945, Serial No. 589,916
In Great Britain October 31, 1944
3 Claims. (Cl. 38—79)



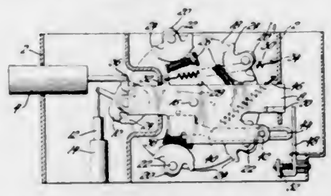
1. A hand iron comprising a main body; a stirrup rigidly fixed thereto; a first handle portion rigidly fixed to said stirrup; a second handle portion pivoted to one upright branch of said stirrup, said second handle part being movable with respect to said first one between an adjacent and a spaced positioned relationship by effect of the weight of said main body, stirrup, and first handle portion, when the iron is suspended by said second handle portion; a link member pivoted to said second handle portion and movable therewith with respect to said main body; a first crank shaft journalled in said main body and rocked by the motion of said link member between two extreme positions corresponding to said adjacent and spaced positioned relationship of said second handle portion with respect to said first handle portion; a second crankshaft journalled in said main body and carrying support extensions, said second crankshaft being rockable between two extreme positions of said support extensions, a lowered operative and a raised inoperative position; link means connecting said first and second crankshafts whereby the rocking motion is transmitted from the former to the latter; and spring means secured to said stirrup and frictionally engaging said link member, whereby sufficient resistance is created to the motion of said link member to prevent the same from occurring by effect only of the moment of said support extensions and crankshafts about their journals.

2,452,440
POSITIVE AND LOCK LATERAL SHOE STRETCHING MECHANISM
Frank De Curtis, Queens Village, N. Y.
Application July 15, 1947, Serial No. 761,109
3 Claims. (Cl. 12—128.5)



1. A device for stretching the vamps of shoes, comprising a support, a longitudinally split shoe form having two parts hinged together at the heel end and supported by said support, a fixed auxiliary member mounted on said support and projecting forward over the forward part of said form to enter a shoe therewith, and means for forcing said parts to swing away from each other about their hinge axis.

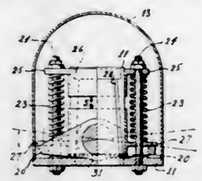
2,452,441
REGULATOR VALVE HAVING A CAPILLARY TUBE EXPANSION PASSAGE
John E. Dube, Clayton, Mo., assignor to Alco Valve Company, University City, Mo., a corporation of Missouri
Application June 17, 1944, Serial No. 540,817
10 Claims. (Cl. 62—127)



2. In a regulating device for a fluid conducting conduit, a valve for the conduit, a capillary tube connected to the outlet side of the valve and through which the fluid flowing through the conduit must pass, a restricted passage for bypassing fluid around the valve when the same is closed, a pressure controlled member for controlling the opening and closing of the valve, said member being subject on one side to the pressure of the fluid in the conduit beyond the capillary tube, and means for subjecting the opposite side of the member to pressure from a pressure producing means controlled by temperature changes.

2,452,442
AUTOMATIC RECLOSING CIRCUIT BREAKER
Andrew W. Edwards, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 19, 1944, Serial No. 554,754
5 Claims. (Cl. 175—294)

1. An automatic reclosing circuit breaker, comprising, separable contacts which are biased closed so as to automatically close the circuit following a circuit interrupting operation, solenoid means for separating said contacts against said bias comprising a coil connected in series with said circuit so as to draw current substantially in phase with the current through said contacts so as to be responsive to overload currents to separate said contacts and interrupt the circuit, and another coil capacitively connected across said circuit to draw current lagging out of phase with the current through said contacts, whereby said solenoid means is effective to separate said contacts in response to low power factor faults as well as overloads which cause excess current at the breaker.



2,452,443
SEQUENTIAL TURRET TUNER
Jacob O. Elsea, Kokomo, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 14, 1946, Serial No. 690,457
3 Claims. (Cl. 74—10)

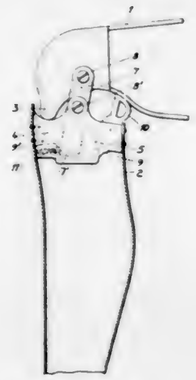
1. In an indexing mechanism for sequential type turret radio tuners including; a reciprocating member carrying a rotatable turret with a plurality of tuning cams equidistantly spaced on said turret, said turret also having a plurality of projections equidistantly spaced thereon, an indexing member slidably supported by said reciprocating member and biased into contact with said equidistantly spaced projections, said indexing member so positioned and arranged as to engage a projection on said turret to index the turret and to engage two of said projections to maintain said turret in the indexed position.

2,452,444
ADJUSTABLE PITCH AIRPLANE PROPELLER
Olaf C. Enerud, Brooklyn, N. Y.
Application April 5, 1945, Serial No. 586,752
2 Claims. (Cl. 170—162)

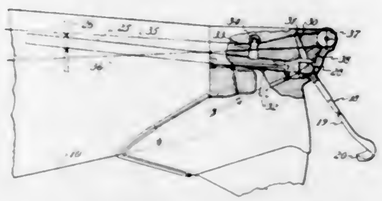
1. An automatically adjustable pitch aeroplane propeller comprising a hub suitable for mounting on a standard propeller shaft, said hub having a plurality of split radial bearings; a plurality of propeller blades rotatably mounted in said radial bearings; a lever fastened to the inner end of each of said propeller blades, said lever being bent in 90 degrees; an inner sleeve slidably mounted upon said hub, said sleeve having a plurality of lugs engageable with the ends of said levers; an outer sleeve slidably mounted upon said hub, said outer sleeve having a plurality of lugs; a plurality of bolts placed through

holes in said lugs in said sleeves and fastened at one end in the rear wall of said propeller hub; a spring placed over each of said bolts with its ends engaged between said lugs of said sleeves whereby the torque developed by said propeller blades reduce the pitch of same against said spring pressure.

2,452,445
BREAD CUTTING BOARD WITH CRUMB TRAY
Arnold Halfdan Ericsson, Jarna, Sweden
Application June 4, 1945, Serial No. 597,413
In Sweden April 23, 1945
2 Claims. (Cl. 146—215)



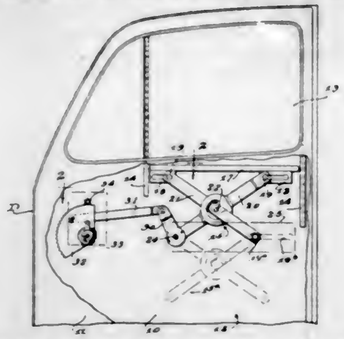
1. A bread cutting board with crumb tray comprising a base shaped as a substantially open-top box and a removable rigid cover for said box, said cover having a substantially plane top surface to support the bread loaf or cake to be cut and being provided with a plurality of parallel slots through which crumbs can fall into said box, a small part of the cover near one edge thereof being imperforate transversely of the apertures to form, with the part of the box underneath said imperforate cover part, a pocket in which crumbs which have fallen into the box are collected on tilting of the latter, the said walls of the box being provided with longitudinal grooves near their upper edges, and the removable cover carrying on its side edges guide rails slidably fitting into said grooves so that the box may be opened for the removal of crumbs therefrom without a complete separation of the cover from the box.



2,452,446
KNEE JOINT FOR PROSTHESES
Otto Ivan Fahlström, Stockholm, Sweden
Application April 28, 1944, Serial No. 533,142
In Sweden January 10, 1942
7 Claims. (Cl. 3—2)

1. A knee joint for prostheses comprising a link swingably connected intermediate its ends with the shin member at each side of the joint, the up-

per ends of the said link being jointed to the thigh casing of the prosthesis, and resilient means urging the lower ends of said links towards the front of the shin member.

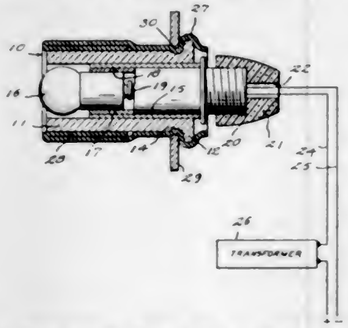


2,452,447
ARRESTING GEAR
Fredric E. Flader, Kenmore, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation, a corporation of Delaware
Application August 29, 1934, Serial No. 741,893
14 Claims. (Cl. 244—110)

3. In aircraft having a fuselage, an arresting gear mounted for longitudinal movement of said fuselage and for subsequent vertical swinging relative thereto, unitary means successively operable to effect said longitudinal movement and for subsequently effecting said vertical swinging.

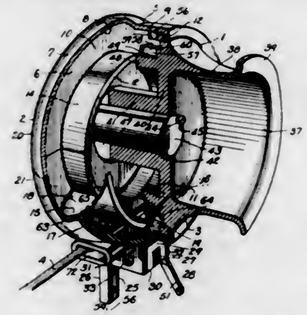
2,452,448
VEHICLE WINDOW REGULATOR
Burton S. Floraday, Toledo, Ohio, assignor to Marvel Equipment Corporation, Detroit, Mich., a corporation of Michigan
Application October 26, 1944, Serial No. 560,372
2 Claims. (Cl. 268—126)

1. Automobile window regulator mechanism comprising a swinging regulator arm adapted operatively to engage at its outer end an edge portion of a window panel for actuation thereof, a pivotal mounting for the inner end of said arm, separate actuating means disposed at one side of the plane of window movement, an operative connection between said actuating means and said regulator arm, said connection including a horizontally disposed link and a relatively short arm to the outer end of which said link is pivoted, said short arm extending at substantially right angles to the inner end of said swinging arm and being initially adjustable angularly relative thereto during installation of the regulator mechanism, and



means for securing said short arm rigidly to the end portion of said swinging arm.

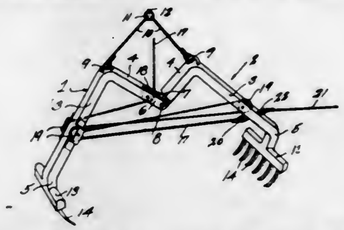
2,452,449
SIGNAL TRAINER
Ralph K. Forsyth, Santa Barbara, Calif.
Application March 19, 1945, Serial No. 583,544
2 Claims. (Cl. 35—14)



1. In a signal trainer, a panel having pockets thereon for the reception of a series of cards, a panel hinged to said first panel and having a series of pockets in vertical alignment, said hinged panel being rotatable upon its hinge to a position adjacent the back of said first panel whereby a signal may be displayed by positioning signal cards in said vertically aligned pockets and by rotating into view said hinged panel into the position adjacent the back of said first panel.

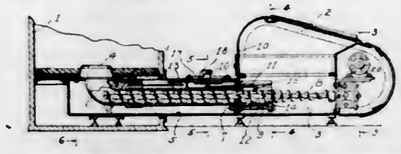
2,452,450
THERAPEUTIC DEVICE
Charles Henry Fredenburg, Nyssa, Oreg.
Application December 6, 1946, Serial No. 714,558
3 Claims. (Cl. 128—399)

1. A therapeutic device for applying heat and light to the mouth and throat of a person comprising a cylindrical body, a metal socket in said body, a contact member in said socket, a light bulb in said socket engaging said contact member, an annular flange on the rear end of said body, said body formed with an annular groove adjacent said flange on the forward side thereof, an open ended cylindrical insulating cover about said body, said cover engaging in said groove and about said flange, an annular disk about said body engaging in said groove, and means connecting said socket and said contact with a source of electric supply.



2,452,451
AUTOMATIC CATHEAD
Orren M. Gahagan, Dallas, Tex.
Application March 23, 1945, Serial No. 584,342
12 Claims. (Cl. 254—173)

10. A device of the character described including a jerk line, a knob, means for swiveling the knob on the end of the jerk line, a stator having a circumferential track for the knob, a stop having check and rest faces forming respective ends of the track, a rotor having a circumferential face substantially corresponding in diameter with the face of the stator for winding the jerk line thereon, means for supporting the stator in substantially coaxial side-to-side registry with the rotor, a transfer mechanism associated with said stator for rolling the swivel mounted knob from engagement with said rest face on the stator into alignment with the circumferential face of the rotor, a knob pickup on the rotor for carrying the line about the face of the rotor, and a deflector adjacent the check station on said stator and extending into the path of said swivel mounted knob to disengage the knob from the pickup and to roll the knob onto the track into position to engage said check face.

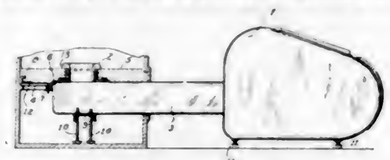


2,452,452
GRAPPLE
Walt R. Girnus, Spokane, Wash.
Application December 3, 1945, Serial No. 632,351
1 Claim. (Cl. 294—112)

A grapple comprising arms formed of metal bars having inwardly bent upper and lower end portions, cross heads at lower ends of said arms projecting from opposite sides thereof, teeth carried by said cross heads and spaced from each other longitudinally thereof, hinge ears at upper ends of said arms pivotally connected and mounting the arms for swinging movement to opened and closed positions, eyes projecting outwardly from inner ends of the bent upper end portions of said arms, a lifting cable over said arms having branch cables extending from its lower end and secured to said eyes, a pulley rotatably mounted between hinge ears of one arm, pulleys carried by said arms in spaced relation to their bent upper and lower end portions, an eye carried by one arm adjacent the pulley intermediate the length thereof, and a cable for moving the arms to a closed position extending downwardly in engagement with the first pulley and

then passed back and forth between the arms in engagement with the second mentioned pulleys and secured at its lower end to the eye intermediate the length of the last mentioned arm whereby pull upon the upper end of the cable will close the arms.

2,452,453
STOKER PROVIDED WITH A METERING CONTROL TO DETERMINE FUEL AND AIR FEED
Roy F. Graham, University City, Mo., assignor to Stok-A-Fire Company, Inc., University City, Mo., a corporation of Missouri
Application April 16, 1945, Serial No. 588,639
3 Claims. (Cl. 110—45)

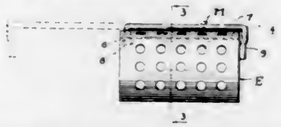


1. In a stoker furnace including a combustion hearth, a coal hopper, a conduit interconnecting said hearth and hopper, a conveyor operative at an unalterable single speed in said conduit for moving coal from said hopper through said conduit to said hearth, manually adjustable means for controlling air to said hearth for combustion, adjustable means manually movable to be set for controlling the rate of feed of coal by said conveyor without varying the speed of movement of the latter, and scale means in the path of movement of said last-mentioned means for indicating thereon the proper settings of said air-control means for each such setting for coal feed.

2,452,454
DEVICE FOR FACILITATING STOKER INSTALLATIONS
Roy F. Graham, University City, Mo., assignor to Stok-A-Fire Company, Inc., University City, Mo., a corporation of Missouri
Application April 16, 1945, Serial No. 588,640
2 Claims. (Cl. 110—45)

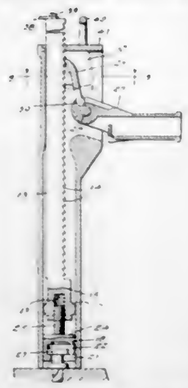
1. The combination with a stoker having a hearth for substantially permanent installation within a furnace and adapted to be spaced from the interior wall of the latter, of a series of rods pivotally carried at said hearth and provided with upwardly extending hooks at their free ends for grasping thereat for manipulation to enable said series of rods to be movable in substantially a

horizontal plane to adjustably vary the distances between their free ends and said hearth, whereby



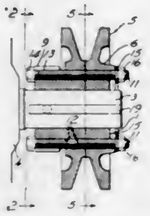
the hooks may be brought into contact with the interior wall of differently sized and shaped furnaces.

2,452,455
LADDER ATTACHMENT
Thomas E. Graham, Oklahoma City, Okla., assignor of one-third to Loyal J. Miller, Oklahoma City, Okla.
Application July 23, 1945, Serial No. 606,611
4 Claims. (Cl. 248—238)



1. As an article of manufacture, a unitary structure including: two vertically spaced horizontal platforms, the upper one partially overlying the lower one; a connector extending between opposite ends of said platforms and rigidly holding them with their upper surfaces in parallel relation; a depending hook at the free end of each platform; and an outwardly extending downwardly projecting stabilizing hook intermediate the ends of said connector.

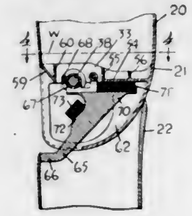
2,452,456
HAIR CURLER
Tom Calvin Grant, Oklahoma City, Okla.
Application July 9, 1946, Serial No. 682,349
4 Claims. (Cl. 132—41)



1. A device for curling hair comprising an elongated cylindrical element, the periphery of the element being provided therealong from one end to the other with a groove and a clasp member comprising an elongated bar to be received within the groove, one end portion of the bar having an angularly disposed arm, the wall of the groove at one extremity being provided with an opening through which said arm is freely disposed, means carried by the outer extremity of the arm for limiting the extent of outward movement of said arm through the opening and means carried by the end portion of the bar remote from the arm and frictionally engaging the opposite end portion of the element to hold the clasp member in effective position.

2,452,457
BOLT PULLER
Griffin W. Gray and Charles B. Wade, Roanoke, Va.
Application September 18, 1945, Serial No. 617,103
3 Claims. (Cl. 254—18)

1. A puller comprising an elongated hollow member formed with a cylindrical housing and a pawl housing extending from said cylindrical housing, a socket member slidable in said cylindrical housing, a toothed rack fixed to said socket member in offset relation whereby one side of said rack will slidably engage both housings, a rock lever carried by said pawl housing, a pawl carried by said lever engaging said rack for moving said rack in one direction and a chuck carried by said socket, said socket being formed with interior threads, and an externally threaded stud carried by said chuck for detachably and rotatably coupling said chuck to said socket.

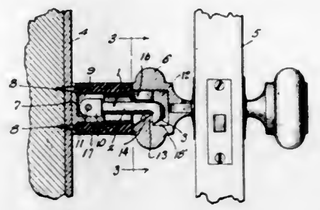


2,452,458
HUB STRUCTURE
Clarence J. Hahn, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application May 23, 1945, Serial No. 595,462
1 Claim. (Cl. 287—53)

In a demountable sheave connection for transmitting the power of a motor or like power source which has a short rotatable power transmitting shaft, an adapter hub having a shaft receiving bore with a keyway in the wall thereof whereby said hub is mounted upon and keyed to said shaft, said hub being radially split along its entire length and having an internal longitudinal groove diametrically opposite said split extending radially from said bore, said hub having a flange formed on one end and substantially the remainder of said hub having an externally tapered portion, threaded means in said flange

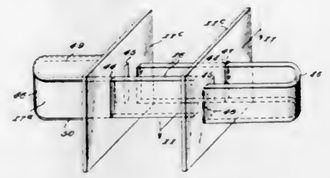
extending across said split for clamping said hub in a fixed position on said shaft, said hub being mounted on said shaft with the flange next to said motor, a sheave having a tapered opening for engaging the tapered portion of said hub mounted on said hub, said connection having a plurality of through bores parallel to the axis of said shaft, each of said bores being of uniform diameter and having one portion in the wall of the tapered opening of said sheave and the remaining portion in said hub so as to intersect the surface of engagement of said sheave and said hub, a bolt member extending through each of said bores, a nut member engaging said bolt member, one of said members bearing against the outer portion of said hub flange and the other bearing against the outer portion of said sheave whereby upon tightening of said bolt and nut the sheave will be drawn on said hub toward said motor.

2,452,459
KNEE STRUCTURE FOR ARTIFICIAL LEGS
James E. Hanger, III, Washington, D. C., assignor to Metal Limb Manufacturers, Inc., Washington, D. C., a corporation of Delaware
Application October 3, 1945, Serial No. 620,049
3 Claims. (Cl. 3—2)



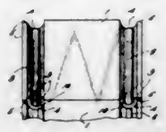
1. An integrally cast knee cap adapted for attachment to the thigh portion of an artificial leg, said cap being of bowl-like form and having aligned side openings for the reception of a pivot bolt, a pair of laterally spaced apart vertical webs extending from front to rear across the interior of the cap, a pair of bearing portions aligned with said openings and each extending between one of said webs and the adjacent side wall of the cap, said webs being interrupted at the inner ends of said bearing portions so as to pass a pivot bolt supported in and extending between said bearing portions, a knee check movably connected to said bolt, said cap having a rear slot providing clearance for the knee check between the planes of said webs, and a transverse wall joining said webs at the top of said slot and presenting an externally faced abutment surface.

2,452,460
SEPARATION OF 1-CYANOBUTADIENE-1,3 FROM ACETIC ACID BY AZEOTROPIC DISTILLATION
Virgil L. Hansley, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 9, 1945, Serial No. 581,928
2 Claims. (Cl. 202—42)



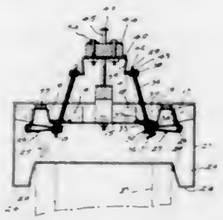
1. A method for the recovery of 1-cyanobutadiene-1,3 from a mixture containing acetic acid impurity which comprises adding triethylamine to said mixture and distilling a fraction consisting essentially of 1-cyanobutadiene-1,3 from the resulting mixture.

2,452,461
DOOR LATCH
Asa J. Harris, Long Beach, Calif.
Application January 11, 1946, Serial No. 640,437
1 Claim. (Cl. 292—130)



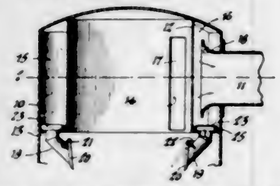
In a door catch for latching a door open and to a wall, a hollow door knob adapted to be mounted on the door for turning in opposite directions and forming a recess in said knob, a latch member having a hook end adapted to enter said recess when said door is opened, and a mounting for said latch adapted to be attached to said wall and in which the other end of said member is pivoted for vertical swinging of said member, said recess having a bottom camming ledge therein over which said hook end may ride upwardly to drop behind the same and latch said door open, and said recess having a front top notch fitting said hook end when the same rides upwardly whereby turning of said knob is prevented until said hook end drops behind said ledge, said recess being widened between said ledge and notch to permit said hook end to be withdrawn from said recess when the knob is turned in opposite directions.

2,452,462
CONCRETE EXPANSION JOINT
John N. Heltzel, Warren, Ohio
Application September 7, 1944, Serial No. 553,057
2 Claims. (Cl. 94—18)



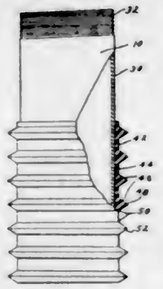
1. Load transfer means for an expansion joint connecting opposed edges of concrete slabs and an interposed apertured expansion strip, said load transfer means comprising a shear plate for engagement with each side of said strip, a dowel rigidly supported by each plate for projection through the aperture in said strip, each plate having an aperture for slidably receiving the dowel of the other plate in the expansion or contraction of the joint, each dowel comprising the forward end of a bar extending through a second aperture in the supporting plate, the bar rearwardly of the plate being bent in the provision of a U-shaped portion with the free end of the bar engaged with the shear plate and rigidly secured thereto, said shear plates being of sufficiently heavy gauge to slidably sustain said dowels and prevent spalling of the slab thereabout and said dowel-receiving apertures being disposed between the opposed legs of the U-shaped portions.

2,452,463
BUILDING BLOCK
Donald H. Herbert, Spokane, Wash.
Application September 4, 1945, Serial No. 614,384
1 Claim. (Cl. 72—38)



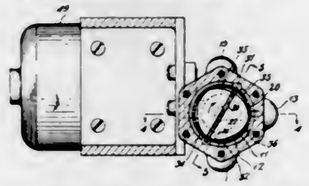
A building block comprising a body having side walls and end walls and longitudinally and transversely extending partitions re-inforcing the walls, said side walls having their upper edge faces formed with longitudinally extending grooves arcuate in cross section and bordered by inner and outer horizontally extending flat surfaces, one end wall being formed adjacent its side edges with grooves arcuate in cross section and having their upper ends registering with ends of grooves in upper edge faces of the side walls, and ribs extending along lower edge faces of the side walls and along the outer face of the other end wall adjacent side edges thereof and projecting outwardly therefrom for fitting into grooves of adjoining blocks of a wall, the ribs being of less width and depth than the grooves to provide mortar-receiving space in the grooves about ribs fitting therein, and the ribs being bordered by mortar-receiving channels extending the full length thereof arcuate in cross section, and the marginal surfaces along outer side edges of the grooves being offset with respect to surfaces along inner side edges of the grooves to provide mortar crevices between confronting outer edge faces of adjoining blocks of a wall.

2,452,464
MORTAR APPLYING DEVICE
James H. Herman, Jr., Temple, Tex.
Application December 19, 1946, Serial No. 717,279
2 Claims. (Cl. 72—128)



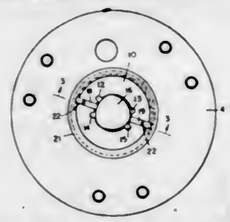
1. A mortar applying device comprising a frame formed of a horizontal plate and a pair of end plates depending from the ends of said first plate, said horizontal plate being formed with a pair of elongated parallel downwardly facing mortar receiving channels on said horizontal plate, a valve member for closing each channel at the open end thereof, means pivotally mounting said valve members below said horizontal plate at one side of said channels, a common operator for said valve members carried by said horizontal plate, each of said end plates being formed with downwardly divergent tapered cutouts within which a tile is adapted to engage to thereby correctly position said channels relative to the tile, and means normally urging said operator to hold said valve members in closed position whereby movement of said operator against the spring tension thereof will pivot said valves to open position for depositing mortar on the tile.

2,452,465
CENTRIFUGAL SEPARATOR
Burton S. Hughes, Buffalo, N. Y., assignor to Zaremba Company, Buffalo, N. Y., a corporation of Maine
Application March 21, 1946, Serial No. 656,001
1 Claim. (Cl. 183—79)



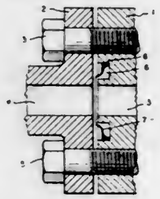
A separator of the character described, comprising a cylindrical body having a concentrically-shaped circular partition therein terminating at its lower end in an annular flange abutting said body and defining inner and outer communicating chambers with the outer chamber closed at its top and bottom and constituting a centrifugal separating chamber, said partition having a port therein for establishing communication between such chambers and a radial closure wall extending across the outer chamber at one side of said port, a vapor discharge pipe communicating with said separating chamber adjacent the opposite side of said radial closure wall and extending part way into the same and having an outwardly-flared intake mouth, a drain pipe leading from the bottom of the separating chamber and provided at its lower end with a vertically-swinging valve for permitting liquid to flow therefrom but preventing the flow of vapor into such chamber, and a box-like shield disposed over the mouth of said drain pipe and having an opening in that side thereof facing toward the direction of flow of the liquid through the separating chamber.

2,452,466
SEALING TIP FOR WELL CASINGS
Roy Jaswell, Smithfield, R. I.
Application July 19, 1944, Serial No. 545,665
1 Claim. (Cl. 166—10)



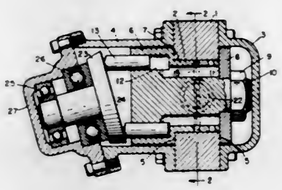
A sealing tip for use on well casings for sealing holes in bed rock, comprising a short pipe section having an externally threaded upper end adapted to be detachably coupled to the threaded lower end of the pipe casing and an annular resilient rubber sealing member comprising a cylindrical sleeve of substantial height permanently rigidly secured throughout its length to the outer surface of the lower end of the pipe section having resilient rubber sealing flanges triangular in section to terminate in annular sealing ridges projecting integrally radially outwardly from said sleeve, said flanges being spaced axially from each other distances at least substantially the radial height of the flanges.

2,452,467
SLIDABLE ABUTMENT ROTARY PUMP
James P. Johnson, Shaker Heights, Ohio
Application December 1, 1942, Serial No. 467,510
17 Claims. (Cl. 103—123)



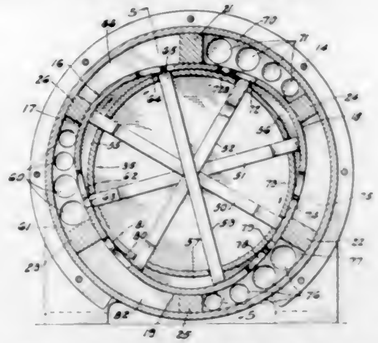
1. A rotary fluid metering pump comprising; a housing having a pump chamber therein, a fluid inlet opening, and a pair of fluid outlet openings; a rotor rotatably disposed in said pump chamber and having a non-circular peripheral wall in the form of alternate ridges and depressions so positioned relatively to each other that the same dimension prevails between all diametrically opposite points on said peripheral wall when passing through the axis of rotation of said rotor, said ridges being rotatably engageable with the inner peripheral wall of said pump chamber and the intervening depressions being of substantially equal volumetric capacities; and a blade assembly slidably but non-rotatably mounted in said housing and having its opposite ends engageable with diametrically opposite sides of the peripheral wall of said rotor for effecting reciprocation of said blade, the opposite ends of said blade dividing said pump chamber into separate non-communicating portions; said pump being provided with a passageway affording communication between said fluid inlet opening and both of said pump chamber portions; said pump containing a pair of non-communicating passageways each of which affords communication between different pump chamber portions and different fluid outlet openings of said pair, whereby, upon rotation of said rotor, fluid is drawn into the alternate depressions successively in both pump chamber portions from said fluid inlet opening and discharged under pressure in substantially equal volumes from the different fluid outlet openings.

2,452,468
RECIPROCATING ABUTMENT FLUID PUMP
James P. Johnson, Shaker Heights, Ohio
Application July 20, 1944, Serial No. 545,777
7 Claims. (Cl. 103—123)



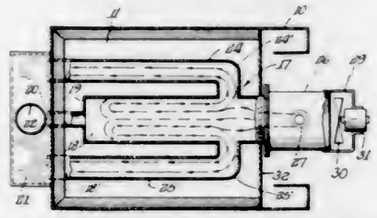
1. In a pump of the character described, the combination of a housing member having a bore therein, a substantially annular stator member in said bore and having radial slots in a local area, a rotor within said stator member, radially reciprocable blades adapted to bear at their centerwise inner ends on said rotor and being mounted in said stator slots, and an annular member bearing by one of its faces against said blades and snugly embracing the periphery of said stator in said area.

2,452,469
SEAL
James P. Johnson, Shaker Heights, Ohio
Application May 22, 1945, Serial No. 595,108
2 Claims. (Cl. 285—137)



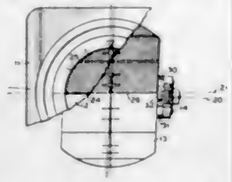
1. The combination with separable machine parts having annular juxtaposed faces, of a metallic sealing ring of S-shaped cross section axially flexed with the large and small diameter axially remote portions thereof respectively in yieldable sealing engagement with such faces, and a non-metallic sealing ring about said metallic ring in sealing engagement with the latter and with the part engaged by such large diameter axially remote portion of said metallic ring.

2,452,470
DISTRIBUTING DEVICE
James P. Johnson, Shaker Heights, Ohio
Application January 17, 1946, Serial No. 641,742
18 Claims. (Cl. 103—1)



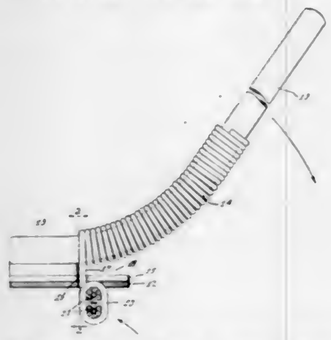
13. In a device of the character described, the combination of a body portion formed with a fluid pressure inlet passage and a plurality of discharge passages, a single rotor rotatably mounted in said body portion formed with a plurality of cavities each of which successively communicates with such inlet passage and a preselected one of such discharge passages during rotation of said rotor, a piston in each of such cavities moved in one direction therein by fluid under pressure when the cavity associated therewith is in communication with such inlet passage, means engaged by said pistons converting such piston movement into rotation of said rotor, said means being so formed that said pistons are forced in an opposite direction during rotation of said rotor when the cavities associated therewith are in communication with their respective preselected discharge passages.

2,452,471
ROTARY VANE PUMP
Guy A. Jones, Long Beach, Calif., assignor to Eaton Pump Manufacturing Company, Inc., a corporation of California
Application May 19, 1945, Serial No. 594,717
2 Claims. (Cl. 103—138)



1. A rotary vane pump comprising a non-rotatable piston cylinder the peripheral wall of which consists of form-retaining sheet material having outswelled peripheral portions forming piston pockets, said outswelled portions being contoured like ends of an ellipse and being circumferentially spaced apart, the spaces between them being bridged by outcurves into which they blend in a streamline manner, said outcurves being parts of circles struck from radii of greater than half the mean diameter of said piston cylinder, a hollow skeletal cylindrical rotor having its periphery contacting the inner surface of the peripheral portion of the wall of said non-rotatable cylinder between adjacent said outswells thereof, and an assembly of interlaced piston blades within said rotor and extending diametrically therethrough, said rotor having peripheral openings through which the diametrically opposite end portions of said piston blades project varying distances as they pass through said pockets to perform the pumping operation, there being inlet and outlet ports associated with said pockets.

2,452,472
COMBUSTION TUBE HEATER FOR COOKING CONTAINERS
Richard T. Keating, Oak Park, Ill.
Application November 4, 1944, Serial No. 561,851
8 Claims. (Cl. 126—391)



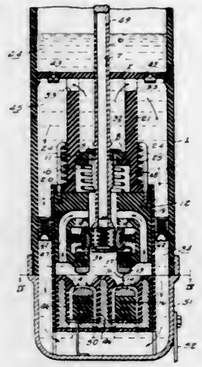
5. The combination of a combustion chamber tube and a pair of L-shaped heat-exchanger tubes communicating with the intake end of said combustion chamber tube adjacent the burner end thereof and having their main body portions extending parallel to said combustion chamber tube, a constricted relatively small outlet flue eccentrically mounted in the end of said combustion chamber tube, said combustion chamber tube having its intake end, opposite the burner end, closed, except for said constricted relatively small outlet flue.

2,452,473
GYROSCOPIC FLIGHT INSTRUMENT
Spencer Kellogg, 2nd, Glen Head, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application October 17, 1945, Serial No. 622,771
10 Claims. (Cl. 74—5)

1. In a universally maneuverable gyro vertical for aircraft, a casing, a ring pivotally mounted in said casing with full freedom about a substantially horizontal axis, a rotor frame mounted on the ring to pivot about a second substantially horizontal axis perpendicular to the first axis; and means for preventing reversal in the relation between the rotor frame and ring when the axis of the ring moves through a vertical position during movement of the craft comprising a pair of stops and a limit piece, one of which is mounted on the frame and the other of which is mounted on the ring, said piece engaging the stops to limit the movement between the frame and ring to a range of between ±75 and ±89 degrees from the normal positions thereof.

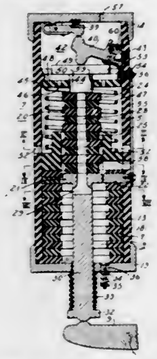
2,452,474
SERVING TOOL
Harry L. Kitselman, Muncie, Ind., assignor to Indiana Steel & Wire Company, Muncie, Ind., a corporation of Indiana
Application December 29, 1944, Serial No. 570,338
7 Claims. (Cl. 140—124)

1. In a serving means for securing together a plurality of elongated articles in juxtaposed relationship, said means comprising a supply of wire in the form of a close-wound helical coil from one end of which there projects in a plane substantially normal to the coil a generally straight stretch of wire adapted to be secured to said articles, the internal diameter of said coil being less than ten times the diameter of the wire composing it, an elongated support disposed within and frictionally engaging said coil, means for locating along said support that end of said coil from which said generally straight stretch extends, said means comprising an abutment having a coil-engaging surface generally normal to the coil-axis, and a shoe mounted at one side of said support adjacent the generally straight stretch of wire extending from said coil and adapted to engage said articles as the support and shoe are rotated thereabout, said serving means being free of any wire-deforming provisions engaging said straight stretch of wire.



2,452,475
CONVERTIBLE RAINCOAT OR CAPE
Marie J. Kraft, Three Oaks, Mich., and Margaret Durey, Cleveland, Ohio, assignors to The Warren Featherbone Co., Three Oaks, Mich., a corporation of Michigan
Application August 13, 1945, Serial No. 610,472
3 Claims. (Cl. 2—87)

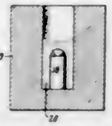
1. A convertible cape or coat comprising front and back body portions each being formed at their shoulder and armpit junctions thereof with elongated arcuate sleeve aperture edges, a pair of sleeves each having at its upper end an arcuate edge extending substantially diagonally to the inner and outer longitudinal edges of the sleeve and which arcuate edges are adapted to be secured to the arcuate edges of the sleeve opening, a pair of cooperating zipper track-carrying tapes associated with each sleeve opening, one of said tapes being secured to the edge of the sleeve opening formed in the back, and said tape being also secured to a portion of the arcuate edge of a sleeve and the other zipper track-carrying tape being secured to that edge of the sleeve opening formed in the front of said body portion and said second tape likewise being secured to the remaining portion of the arcuate edge of said same sleeve, and a slider mechanism cooperating with said zipper track portions carried by said tapes whereby to lock and unlock them so that when the zipper tracks are unlocked the sleeve may be projected externally of the coat to form an ordinary type of sleeve permanently secured to the body portion of the coat and whereby alternatively said sleeve may be tucked in said sleeve opening and extended inside of said coat and the zipper tracks locked to close the sleeve aperture and provide a cape.



2,452,476
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 15, 1944, Serial No. 549,575
14 Claims. (Cl. 200—150)

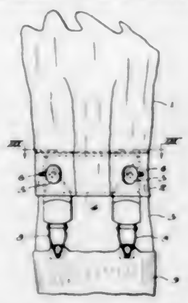
1. In a circuit interrupter of the liquid break type, a substantially enclosed casing, an operating rod movable through a wall of the casing, a liquid moving piston secured to and movable with the operating rod within the casing, a cylinder within which the piston moves to drive liquid, a relatively stationary ring-shaped contact, an operating member carrying a movable ring-shaped contact and adapted for limited movement axially of the casing, biasing means surrounding the cylinder biasing the operating member and movable ring-shaped contact to the open position, a

resilient means interposed between the piston and the operating member so that closing movement of the operating rod will effect through the resilient means closing motion of the operating member and movable ring-shaped contact against the biasing action exerted by the biasing means, and liquid passage means communicating at one end with the piston movable within the cylinder and at the other end with the two ring-shaped contacts.



2,452,477
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 16, 1945, Serial No. 588,573
17 Claims. (Cl. 200—150)

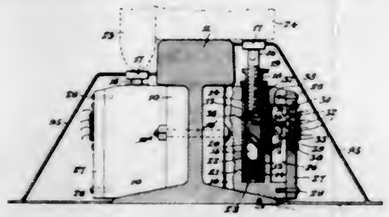
1. In a circuit interrupter, a piston chamber, a stationary contact, a piston member carrying a movable contact and operative within the piston chamber, the movable contact separating from the stationary contact to establish an arc when the piston member is moved into the piston chamber, the movement of the piston member into the piston chamber causing fluid to flow toward the arc to facilitate the extinction there-



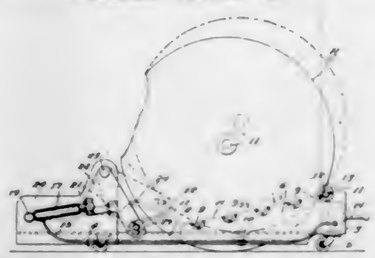
of, a by-pass channel formed in the piston member to permit fluid within the piston chamber to by-pass the arc, and means operable only during high current interruption to close the by-pass channel.

2,452,478
DIAMOND TOOL AND METHOD FOR MAKING THE SAME
George W. Lucas, St. Clair Shores, Mich., assignor to Carboloy Company, Inc., a corporation of New York
Application May 10, 1944, Serial No. 534,920
4 Claims. (Cl. 125—39)

1. A diamond tool comprising a plurality of similar layers, each of said layers consisting of spaced diamonds embedded in a sintered hard metal carbide matrix impregnated with a cupreous metal, the number of diamonds in each layer being substantially equal and spaced apart substantially equal distances.



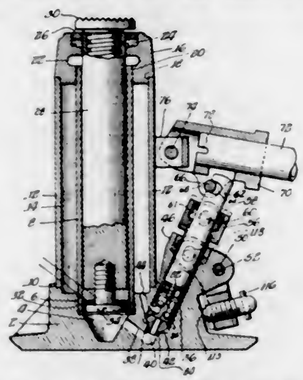
2,452,479
UNDERGARMENT
Frank N. Mason, Charleroi, Pa., assignor of one-fourth to Robert C. Mason, Pittsburgh, Pa.
Application September 3, 1947, Serial No. 771,949
6 Claims. (Cl. 2—224)



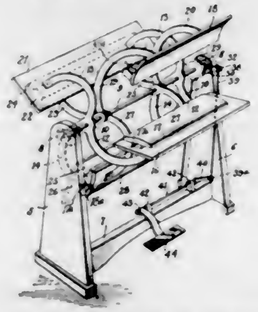
1. An improved undergarment having tubular leg portions adapted to reach just below the knees of the wearer, a circumferential hem of relatively inelastic material in the lower extremity of each leg portion, and an elastic tape disposed within the circumference of each hem and having its ends detachably secured at circumferentially spaced points in the sides of the hem, the elastic tape being adapted to rest directly against the front of the wearer's leg and to draw the back of the hem against the back of the wearer's leg and to leave the front of the hem and adjoining undergarment leg portion loosely disposed in front of the wearer's knee.

2,452,480
DEFECT DETECTOR FOR RAILWAY CAR WHEELS
James J. Mason, San Simon, Ariz.
Application August 17, 1945, Serial No. 611,075
2 Claims. (Cl. 246—246)

1. A contact device for the purpose set forth comprising a fixed housing adapted to be arranged at one side of a track rail and provided with a vertically disposed plunger chamber, a set of spaced contacts insulated from each other, mounted in and insulated from the housing and spaced from said chamber, said chamber having a slotted wall, a vertically movable spring controlled plunger operating in said chamber and provided with a vertically adjustable head impacted by a mobile body travelling over the track rail for varying the upward movement of the plunger, and a spring controlled circuit opening and closing element bodily movable with, connected to and extended laterally from the plunger, said element extended through said slot and cooperating with said contacts to close an actuating circuit when the plunger moves from normal position.



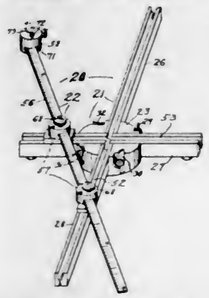
2,452,481
HYDRAULIC REEL MOUNT FOR WAREHOUSE TRUCKS
John H. Morehead and Henry D. Schmidt, Long Beach, Calif.
Application December 17, 1946, Serial No. 716,716
5 Claims. (Cl. 214—65)



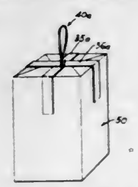
1. In a reel carrier, the combination with a horizontally disposed U-shaped base having a pair of longitudinally extending laterally arranged bed plates, and an interchangeable roller journaled in said plates, of a pair of longitudinally extending frame plates spaced from the bed plates and rigid with the base, a hydraulic jack pivotally mounted on each frame plate and manually controlled means for operating the jacks, an elevating lever mounted on each frame plate and operative connections between said levers and jacks, said levers having axially alined journal bearings, and an interchangeable reel-elevating roller journaled in said alined bearings.

2,452,482
HYDRAULIC JACK
Joseph J. Mueller, St. Joseph, Mich., assignor to Auto Specialties Manufacturing Company, St. Joseph, Mich., a corporation of Michigan
Application May 13, 1944, Serial No. 535,436
12 Claims. (Cl. 60—52)

1. In an hydraulic jack having a base provided with a bore, said base having thereon a ram cylinder, a liquid reservoir associated with said base, a pump cylinder comprising a sleeve of uniform cross section having a smooth exterior slidable in said bore, a ram for the ram cylinder, a piston reciprocable in the pump cylinder sleeve, conduit means in the base interconnecting the reservoir, the pump cylinder and the ram cylinder, ported and valved means carried by said pump cylinder sleeve for transferring liquid through said conduit means from the reservoir to the pump cylinder, and from the pump cylinder to the ram cylinder upon reciprocation of said piston, release valve means including a valve seat formed in the base in association with certain of said ports and including a release valve carried by said ported and valved means and shiftable with said cylinder sleeve and ported and valved means, and means connected with said cylinder and operative from a point exteriorly of said base, for sliding said sleeve in a direction parallel to its longitudinal axis while holding said sleeve from rotation for closing said release valve upon its seat.

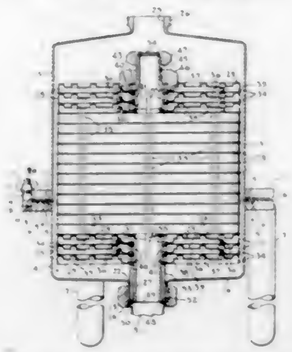


2,452,483
ROTARY PRESSING MACHINE FOR CONTINUOUS PRESSING OPERATIONS
Abe Newhouse, Brooklyn, N. Y.
Application August 1, 1946, Serial No. 687,667
3 Claims. (Cl. 38—22)



1. In a pressing machine; a rotatable horizontal shaft, a plurality of fixed bucks, a plurality of movable bucks adapted to cooperate with said fixed bucks, respectively, said shaft forming a common support for said fixed bucks and said movable bucks, brackets fixed to and radially extending from said shaft, radial arms loosely mounted on said shaft, said fixed bucks being connected to said brackets, said movable bucks being arranged for operative pressing contact with said fixed bucks, respectively, and being carried by said loosely mounted arms, and means operatively connected to said shaft to rotate the latter to thereby bring said movable bucks and respective fixed bucks successively in position before an operator.

2,452,484
ELLIPSOGRAPH
Kenneth B. Noble, Hartford, Conn.
Application April 15, 1944, Serial No. 531,149
4 Claims. (Cl. 33—31)

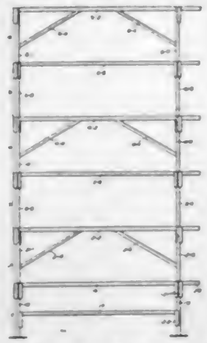


3. An ellipsograph including: a center hub; track-members forming track-means which is provided with two trackways extending transversely of one another; at least one of said track-members being removably securable to said center hub by means of a latch which is spring-pressed to latched position; said removable track-member having a cam-face adjacent one end for forcing the latch back against the action of the spring; and scribing means including slides slidable in said trackways for scribing an ellipse.

2,452,485
SEALING AND CARRYING DEVICE
William Obernauer, New York, N. Y., assignor to Ernest Jacobson, New York, N. Y.
Application April 17, 1945, Serial No. 588,827
5 Claims. (Cl. 229—52)

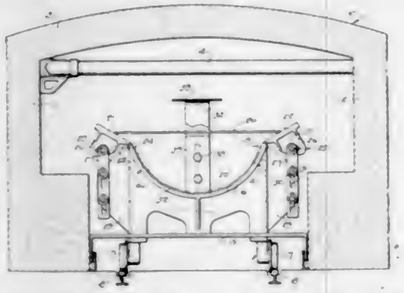
1. A device for sealing and carrying packages, parcels and like articles comprising two endless tapes, flexible handle means equidistantly arranged on and fixed to one of said tapes, the other of said tapes being provided with a plurality of perforations disposed adjacent said handle means of said one tape, said handle means extending partly through said perforations, respectively whereby said two tapes are coupled with each other, predetermined portions of said tapes being severable from the remainder of said tapes, so that the tape portion with perforation comes to lie on top of the tape portion provided with said handle and for rotatable movement about said handle prior to the application of said tape portions to a package to be sealed.

2,452,486
FILTER
James P. O'Meara, Milwaukee, Wis., assignor to W. M. Sprinkman Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application January 24, 1947, Serial No. 724,145
4 Claims. (Cl. 210—185)



1. In a filter, the combination with a housing having a threaded opening, of an apertured stand-pipe having a flanged end abutting a portion of said opening, a supply pipe having a flanged end, a washer interposed between the flanged ends of said pipes, a nut for clamping the above named parts together and to said threaded opening, a spacer sleeve abutting the flanged end of said stand-pipe, a series of annular pad supporting disks arranged on said stand-pipe in juxtaposition having openings communicating with the apertures in said standpipe, annular filter pads interposed between said disks and clamped therebetween at their inner and outer edge portions, the upper end of said standpipe being threaded, and a nut mounted on said upper threaded end for clamping said disks and pads between it and said spacing sleeve.

4. In a filter, the combination with a housing having a threaded opening, of an apertured standpipe having a flanged end abutting a portion of said opening, a supply pipe having a flanged end, a washer interposed between the flanged ends of said pipe, a nut for clamping the above named parts together and to said threaded opening, a spacer sleeve abutting the flanged end of said stand-pipe, a series of annular pad supporting disks arranged on said stand-pipe in juxtaposition having openings communicating with the apertures in said standpipe, annular filter pads interposed between said disk and clamped therebetween at their inner and outer edge portions, and means for exerting a clamping pressure on said pads and disks.

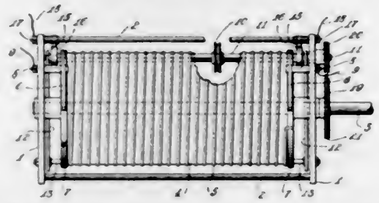


2,452,487
SCAFFOLDING AND LIKE STRUCTURES
Eugene O'Sullivan, Chislehurst, England
Application July 9, 1946, Serial No. 682,386
In Great Britain July 4, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires July 4, 1965
12 Claims. (Cl. 304—2)

1. A scaffold structure including at least two units, one of which units comprises four uprights, means rigidly connecting said uprights together in pairs to form two end frames, at least two longitudinal members and means for detachably connecting said longitudinal members at their ends to said end frames to form the unit, and another of which units comprises four uprights, means rigidly connecting said uprights together in pairs to form two side frames, at least two transverse members and means for detachably connecting said transverse members at their ends to said side frames to form the unit,

one of said units being adapted to be erected on top of the other said unit with the uprights of the upper unit superimposed on the uprights of the lower unit and means being provided for connecting the corresponding uprights of the upper and lower unit together to retain them against lateral displacement.

2,452,488
APPARATUS FOR BENDING GLASS
Ormond H. Paddock, Rossford, and John P. Pearse, Swanton, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application December 19, 1941, Serial No. 423,632
11 Claims. (Cl. 49—7)

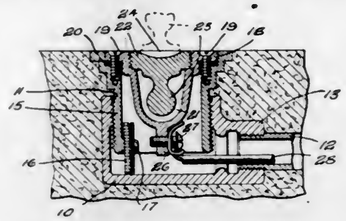


1. A method of bending glass sheets upon a shaping surface by the action of heat and gravity, comprising directing heat sufficient to bend the glass substantially uniformly toward the entire sheet and at the same time shielding preselected portions only of the area of said sheet from said heat to retard the heating thereof while accelerating the heating of other preselected portions to promote uniform settling of the sheet onto the mold and cause it to accurately conform to the mold shape throughout the area of the sheet.

4. In apparatus for bending glass sheets the combination with a bending mold for supporting a glass sheet to be bent and means for subjecting said sheet to radiant heat to effect a softening of the glass and settling of the sheet to take the shape of said mold, of a shielding body positioned above the mold and between it and the source of said radiant heat for retarding the passage of the heat rays to preselected portions of said sheet, and a heat reflecting surface beneath the sheet for reflecting certain of the heat rays back against the sheet.

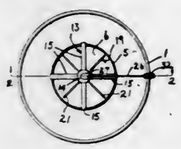
2,452,489
MOTOR FUELS
William Arthur Partridge and Harold John Alty, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British corporation
No Drawing. Application February 1, 1946, Serial No. 644,998. In Great Britain February 19, 1945
7 Claims. (Cl. 44—69)

1. A process for stabilising gasoline fuels containing tetra-ethyl lead, consisting in the addition to the fuel of a small proportion of dialkyl sulphate.



2,452,490
CONTINUOUSLY VARIABLE INDUCTANCE
Charles Edward Payne, London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application November 3, 1944, Serial No. 561,816
In Great Britain June 22, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 22, 1963
4 Claims. (Cl. 171—242)

1. Electrical apparatus comprising a continuous conductor mounted on a support, means rotatably mounting said support, a contact member in the form of a roller, means for causing said contact roller to traverse the length of said conductor by rotation of said support to enable the point of contact to be at any position within the length traversed by said contact roller, means for maintaining a desired contact pressure between said conductor and said roller, and driving means mechanically linking said roller to said rotatable support for constraining said roller to rotate at a speed substantially different from that corresponding to a simple rolling movement on said conductor when said rotatable support is rotated whereby an effective wiping contact between said roller and said continuous conductor is obtained during operation of the electrical apparatus.

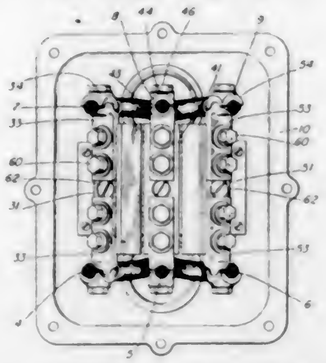


2,452,491
GROUNDING FITTING
Jay R. Petree, Fayetteville, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York
Application August 23, 1946, Serial No. 692,461
5 Claims. (Cl. 174—51)

4. A grounding fitting of the type described comprising an outlet box having an open side and being provided with means for attachment to a grounded conductor, said box being adapted to be positioned in a wall or floor structure with the open side of the box accessible through the surface of the wall or floor structure, a sleeve mounted in the open side of the box and being adjustable toward and from the surface of the wall structure, means cooperable with said sleeve and box to maintain the sleeve in adjusted position, a cover member detachably secured to the outer end of said sleeve and being formed with a central de-

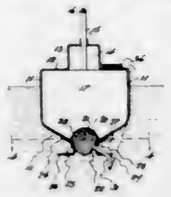
pressed portion extending into the sleeve, a terminal member formed with a substantially flat base portion and a contact projection, and means for detachably securing the base portion of said terminal member to the cover with the contact projection extending outwardly therefrom, or in reverse position with said contact projection extending into said recess.

2,452,492
CHURN
Walter Rivers, Coeur d'Alene, Idaho
Application July 22, 1946, Serial No. 685,472
1 Claim. (Cl. 259—56)



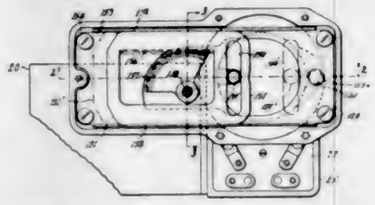
A churn comprising a container open at its top, means for removably mounting the container upon the upper end of an oscillating shaft, an agitator in said container having a vertical sleeve and blades carried thereby, a rod passing vertically through the sleeve and projecting upwardly therefrom, the sleeve being fixed to the rod, said rod having its lower end rotatably mounted at the bottom of the container to permit oscillation of the container relative to the agitator, a spider removably supported upon said container and formed with a bearing at its center through which the rod loosely passes, a bracket detachably connected with the upper end of the rod, a resilient wire curved longitudinally and having one end detachably connected with the bracket, and a clamp at the other end of the wire for detachably securing the wire to a support.

2,452,493
SILICONE RESINS FOR WELD COATINGS
Ernest Clarence Rollason, Waltham Abbey, and Ernest Horace Sebastian van Someren, Broxbourne, England, assignors to Metal & Thermit Corporation, a corporation of New York
No Drawing. Application January 23, 1947, Serial No. 723,886. In Great Britain February 22, 1946
6 Claims. (Cl. 219—8)



1. A flux coated electrode having as a binding agent in the coating an organo-silicon polymer.

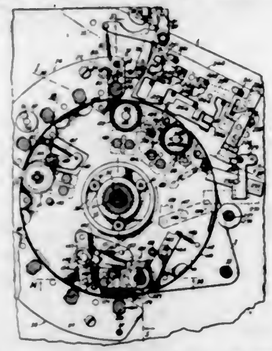
2,452,494
PULL POINT CONNECTION DEVICE
Edward M. Rothen, Bloomfield, N. J., assignor to Russell & Stoll Company, Inc., New York, N. Y., a corporation of New York
Application October 28, 1947, Serial No. 782,633
5 Claims. (Cl. 174—59)



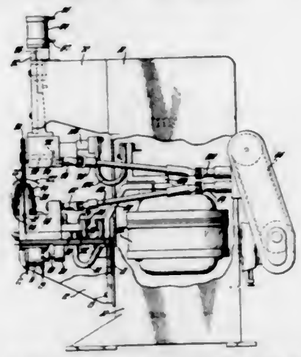
3. The combination for connecting the ends of large size electric insulated cables, and conductors, comprising a metallic plate apertured near each end for passage of a plurality of large insulated conductors, a supporting saddle mounted on said plate, said saddle having a horizontal top-central portion with side portions which incline obliquely downwardly on opposite sides thereof to the side walls of the saddle, individual insulating blocks of substantially rectangular form affixed to said top-central and said inclined surfaces, conductive bar members affixed to the top surfaces of said blocks and running between the ends of said blocks, terminal members at each end of each bar member and extending beyond the end adjacent the conductor-entrance apertures in said plate, means to secure the bared ends of conductors as they enter through said apertures in a straight line or at a deflection from a straight line not exceeding about 30° to said extending portions of said terminal members.

2,452,495
TOY SUBMARINE
Frederick Sabini, Salem, N. J.
Application August 23, 1946, Serial No. 692,444
5 Claims. (Cl. 46—94)

1. In a toy submarine of the kind described, a hollow hull body to which water is admissible when it is set afloat, air venting means communicating with the interior of said hull body, said hull body having at its top portion means to provide an air chamber adapted to buoy said hull body against the weight of water entered therein, a ballasting weight, said hull body having a downwardly open weight housing chamber at the bottom thereof, said weight having a major diameter and a minor diameter, weight supporting bracket means bordering the sides of said housing chamber, said supporting bracket means being spaced apart to provide a weight passage of a width slightly larger than the minor diameter of said weight, said weight being disposed with its major diameter across said supporting bracket means whereby to connect the weight with the hull body, said weight being turnable about its longitudinal axis whereby to place its minor diameter in a horizontal position within said weight passage so as to permit release of the weight from said hull body, and a lever arm extending from said weight operative, after submergence of the toy submarine, upon contact with the bottom to turn said weight to released position.



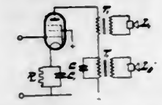
2,452,496
WINDSHIELD WIPER BLADE OPERATING MECHANISM
Paul L. Schneider and Derother H. Dudderar, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 26, 1947, Serial No. 744,210
6 Claims. (Cl. 74—70)



1. Apparatus for operating a windshield wiper comprising a motor, an actuator for moving a wiper blade, means for transmitting motion from the motor to the actuator including an adjustable-throw crank having a normal position for effecting movement of the actuator in a normal range and having a second position for effecting movement of the actuator outside the normal range, a manually positioned member for stopping rotary movement of the crank, and means cooperating with said member for causing the crank to move to its second position before rotary movement of the crank ceases.

2,452,497
CONTROL AND INDEXING MECHANISM FOR DOCUMENT PHOTOGRAPHING MACHINES
Friedrich J. Schutt, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application March 30, 1944, Serial No. 528,682
7 Claims. (Cl. 235—91)

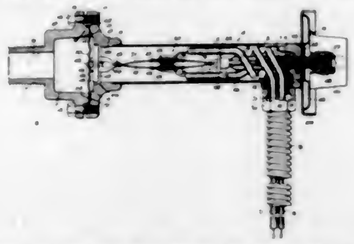
1. In a document photographing machine, a support, a drum rotatable on said support, means for normally rotating said drum, a changeable indicia unit mounted on said drum to display indicia at the periphery thereof, a number advancing means mounted on said drum having a pawl operable to engage said indicia unit for advancing the indicia of said unit in successive order, a numeral advancing member pivoted on said support and movable into an operative position to be engaged by said number advancing means and cause movement of said advancing means for changing the indicia displayed by said indicia unit, said advancing means cooperating with said advancing member to move it into an inoperative position at the end of each advancing operation, means for normally holding said advancing member in inoperative position, and manual means for releasing said advancing member for engaging and operating said advancing means in the rotation of said drum relative thereto.



2,452,498
SEAM WELDING
Fred J. Schwartz, Walled Lake, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 7, 1947, Serial No. 778,493
6 Claims. (Cl. 219—4)

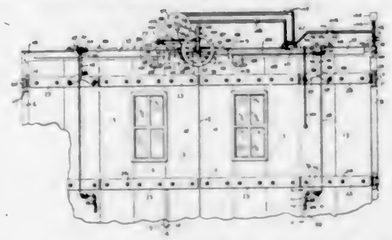
1. An apparatus for seam welding a welding strip to a pair of parts having inturned flange portions in contact with one another and having a generally V-shaped groove formed at the outer surface of the parts adjacent the inturned flanges within which a welding strip is placed which comprises, a pair of lower disc electrodes mounted for rotation on inclined axes so that the upper portions of the pair of rollers are closer to each other than are the lower portions, each of said disc electrodes tapering toward the peripheral portion thereof and being of arcuate shape in cross-sectional outline at the peripheral portion, the arcuate shaped surface adapted when in welding position to be in pressure contact with the inner junction between the flange and the main body of a flanged part, a slide carrying one of said pair of disc electrodes, an air cylinder for moving said slide and the electrode of said pair carried thereby to apply pressure to the flanged parts adjacent the inner junctions of the flanged parts with the main bodies of said flanged parts, a roller electrode above said pair of disc electrodes adapted when in welding position to apply pressure to the welding strip and to force the same into said generally V-shaped groove and toward said pair of disc electrodes, a slide carrying said roller electrode, an air cylinder for moving said slide to thereby apply pressure to the welding strip through said roller electrode, means for rotating the three electrodes to move the parts to be welded relatively to the electrodes, and means for applying welding current to the electrodes while the electrodes are rotating and the parts to be welded are under pressure.

2,452,499
AMPLIFYING CIRCUIT ARRANGEMENT
Gerrit Jan Siezen, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application October 18, 1946, Serial No. 704,122
In the Netherlands August 3, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires August 3, 1965
4 Claims. (Cl. 179—1)



1. An amplifier circuit arrangement for operating a high frequency reproducer in conjunction with a low frequency reproducer having different electro-acoustic characteristics for reproducing a given band of frequencies, comprising an electron discharge tube having an anode, a control grid and a cathode, means to apply a signal voltage having a frequency within said band of frequencies between the control grid and cathode of said tube, a high frequency reproducer, a low frequency reproducer having different electro-acoustical characteristics than said high frequency reproducer, a first transformer having a primary winding and a secondary winding proportioned for optimum transfer of energy to said high frequency reproducer and being coupled thereto, a second transformer having a primary winding and a secondary winding proportioned for optimum transfer of energy to said low frequency reproducer and being coupled thereto, means to connect the primary windings of said transformers in series between the anode and the cathode of said tube, a capacitor shunting the primary winding of said second transformer, said series-shunt circuit having values of inductance and capacity at which the impedance of the circuit is substantially independent of frequency throughout said band of frequencies, and means interposed between the grid and cathode of said tube to apply a potential proportional to the current in said series-shunt circuit in opposition to said signal voltage thereby to produce an acoustic output substantially proportional to said signal voltage.

2,452,500
PRESSURE SWITCH
Norman J. Smith, Medfield, Mass., assignor to Fenwal Incorporated, Ashland, Mass., a corporation of Massachusetts
Application January 18, 1945, Serial No. 573,322
15 Claims. (Cl. 200—83)



1. In an electric switch device having a switch unit comprising a pair of metallic strips oppositely bowed in one direction along their working length and held together at their corresponding ends and a tubular case longitudinally housing the

switch unit, the combination therewith of an extension at one end of the case providing a pressure chamber having a fluid inlet, a pressure diaphragm transversely partitioning the chamber and the adjacent end of the switch strip pair,

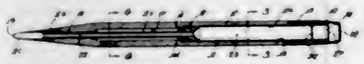
abuttive connecting means between said end of the strip pair and the diaphragm, and rigid connecting means between the other end of the strip pair and the corresponding end of the case whereby the switch unit is operatively subject to pressure conditions at the diaphragm.

2,452,501
GARAGE DOOR OPERATION
Albert J. Swanson, Oak Lawn, and John R. Gardner, Bellwood, Ill.
Application April 29, 1946, Serial No. 665,747
12 Claims. (Cl. 268—63)

5. In a device as described, a door frame, a pair of oppositely arranged swinging doors mounted in said frame, brackets carried by said doors having outwardly spaced upwardly extending arms terminating in bearing portions, a pair of oppositely extending link arms having their inner ends pivotally mounted in said bearing portions, motor-controlled oppositely movable horizontally disposed members to which the inner ends of said link arms are pivotally attached for joint movement with said link arms, said link arms being automatically adjustable in length, as said doors swing to open position, keepers carried by said bearing portions, latching members vertically movable upon said frame and having latching terminals which engage said keepers to hold the doors closed, and also formed with lateral beveled lugs, and means carried at the outer ends of said link arms exerting a wedging action against the beveled lugs of said latching members for disengaging them from said keepers.

2,452,502
SHOE CONSTRUCTION
John P. Tarbox, Philadelphia, Pa.
Application April 23, 1945, Serial No. 589,722
9 Claims. (Cl. 36—2.5)

1. A shoe comprising vamp and heel portions hinged together below the inner and upper surface of the sole for relative pivotal movement to occupy closed position about the foot and open position for removal from the foot, together with a catch means provided between the portions, said catch means including a spring tensioned



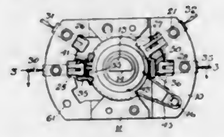
member adapted to hold the heel in closed and open positions, said spring tensioned member being displaceable from either open or closed position by a movement of the heel portion.

2,452,503
PISTON RING
Ralph R. Teetor, Hagerstown, Ind., assignor to The Perfect Circle Company, Hagerstown, Ind., a corporation of Indiana
Application June 21, 1944, Serial No. 541,334
8 Claims. (Cl. 309—45)

1. A piston ring comprising a pair of axially spaced flanges, web members extending radially inward from said flanges and having axially extending portions to integrally connect said flanges and outwardly bowed to provide a wide channel, said web members being circumferentially spaced to provide both axial and radial openings therebetween, and a coiled spring seated in and against on the outwardly bowed portions of said web members.

2,452,504
WRITING INSTRUMENT
Ivan D. Tefft, Janesville, Wis., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Application July 27, 1945, Serial No. 607,380
11 Claims. (Cl. 120—42.4)

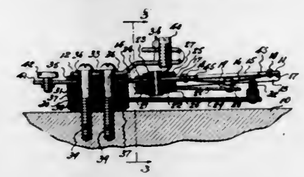
1. A ball-point type of fountain pen comprising a barrel having a cartridge-receiving chamber in its rear end and a reduced axial bore in its forward end, and a point-and-cartridge unit comprising a reservoir section adapted to fit snugly in said cartridge chamber, an elongated feed section of reduced form having a feed passage therein and snugly fitted and frictionally guided in said bore, said feed section having its forward end formed to provide a ball-receiving socket, a ball-point member mounted in said socket, and means between said reservoir section and said barrel for detachably securing said unit within said barrel.



2,452,505
DEHYDROGENATING SATURATED NITRILES TO UNSATURATED NITRILES
John W. Teter, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 23, 1943, Serial No. 491,937
1 Claim. (Cl. 260—465.9)

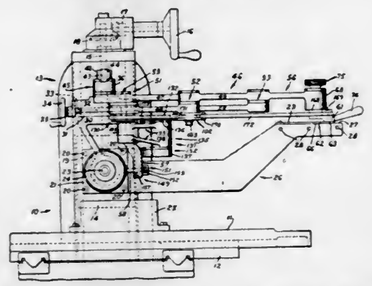
In the catalytic dehydrogenation of nitriles for the production of unsaturated nitriles, the improvement which comprises carrying out the dehydrogenation in the presence of a catalyst comprising a mixture of a major proportion of tungsten sulfide and a minor proportion of nickel sulfide.

2,452,506
FOOD PREPARATIONS
Suzanne Mabel Lavinia Tritton, Loughton, England
No Drawing. Application September 5, 1945, Serial No. 614,605. In Great Britain October 9, 1944
2 Claims. (Cl. 99—210)



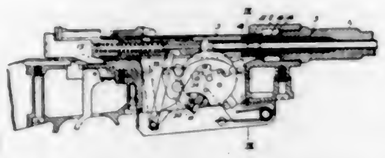
1. A process for the preparation of a dehydrated egg composition from undehydrated eggs for use in the baking and confectionery arts which comprises intimately admixing undehydrated eggs with an amount of pectin constituting from 0.5–10% based on the dehydrated weight of the eggs and dehydrating the resulting mixture to form a composition having an increased viscosity when whipped with an aqueous liquid as compared with conventional dehydrated egg compositions.

2,452,507
SNAP-ACTION FLUORESCENT LIGHT SWITCH
Meyer Turkat, Flushing, N. Y., assignor to Atlas Consolidated Corporation, New York, N. Y., a corporation of New York
Application August 1, 1947, Serial No. 765,344
4 Claims. (Cl. 200—6)



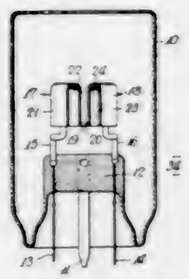
1. A snap-action switch comprising a base plate having a plurality of contact members affixed thereto, a movably mounted plate having a plurality of additional contact members affixed thereto positioned, when the movable plate is rotated, to engage the first-mentioned contact members in predetermined order, a rotatably mounted support for said movable plate, a spring member connected to said rotatably mounted support, said spring member having a raised portion at one end and a tooth-shaped portion at the opposite end, a stop member connected to the base plate positioned for engagement with said toothed portion, a tension member mounted on said base plate positioned for engagement with said raised portion, said tension member acting to urge said spring member and with it the movable plate, the plate support and the contact members on said movable plate, to move in counter-clockwise direction from a predetermined point until brought to a halt by the stop member which engages the toothed portion on said spring member, further movement in a counter-clockwise direction of said spring member being effected by manually moving it in counter-clockwise direction and causing its toothed portion to slide over the stop member on the base plate.

2,452,508
SNAP ACTION THERMAL LIMIT SWITCH
Herman Ulanet, Newark, N. J.
Application December 18, 1945, Serial No. 635,810
6 Claims. (Cl. 200—139)



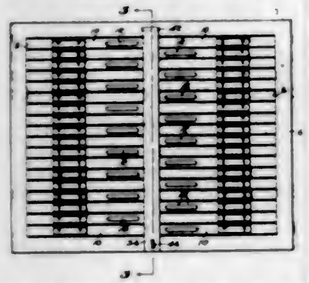
1. In a snap action thermal limit switch having a stationary contact means and a movable contact spring, and a frame plate provided with an elongated opening bridged by said contact spring, said contact spring being fixed by its opposite ends to said frame plate under compression stress operative to bow its mid-portion, an adjustable means connected with said frame plate disposed to overhang an end portion of the frame plate opening, said adjustable means being adapted to be moved to optionally position the same out of engagement with the contact spring or so as to intersect the plane of a fixed end of said contact spring and thus to engage and pre-stress the contact spring toward the stationary contact means.

2,452,509
WHEEL TRUING DEVICE
Frederick C. Victory, West Haven, and John Robert Moore, Bridgeport, Conn., assignors to Moore Special Tool Co. Inc., a corporation of Connecticut
Application September 27, 1944, Serial No. 555,952
20 Claims. (Cl. 125—11)



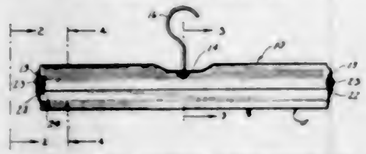
1. In a grinding machine, a wheel dressing means including a dressing tool, a stylus and a template to be traced by said stylus, a pantograph means mounting and connceting the stylus and tool whereby rectilinear movements of the stylus along the working face of said template are duplicated by the tool but on a reduced scale, and means supporting said tool independent of said pantograph means whereby the weight of said pantograph means and any pressure applied thereto is prevented from forcing the tool in the direction of the grinding wheel of the machine.

2,452,510
SUB-CALIBER ASSEMBLY FOR FIREARMS
Victor Henri Wallenberg, Stockholm, Sweden
Application May 4, 1945, Serial No. 591,948
In Sweden April 28, 1944
31 Claims. (Cl. 42—19)



1. A sub-caliber assembly for use in a bolt-action rifle of the type including a bolt, a bolt case, a fixed barrel secured to the bolt case, and a magazine case, said assembly comprising; an insertion barrel constructed and arranged to be at least partly inserted into the bore of said fixed barrel and having a smaller caliber than said fixed barrel, a substitute bolt, a cartridge magazine, means constructed and arranged to support said magazine in said magazine case, said magazine having a plurality of cartridge chambers for cartridges, and means responsive to the movement of said substitute bolt for bringing said cartridge chambers successively into firing position relative to said insertion barrel.

2,452,511
HEAT RESPONSIVE SWITCH
Adolph Warsher, Maywood, N. J., assignor to Maxwell M. Bilofsky, Newark, N. J.
Application July 7, 1944, Serial No. 543,939
4 Claims. (Cl. 200—113.5)

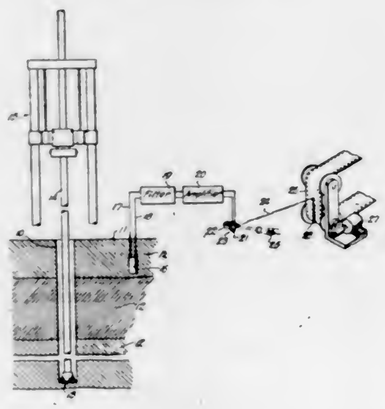


2. A glow discharge switch comprising a hermetically sealed envelope, a pair of thermally responsive electrodes therein forming a glow discharge gap therebetween, said electrodes being located so that the deflection path of one is at an angle to the deflection path of the other, each of said electrodes carrying a contact, said contacts being normally spaced but correlated for engagement to short circuit said glow discharge gap upon deflection of one of said electrodes by the heat involved in said envelope, the other of said electrodes being relatively sluggish in its thermal response whereby, after prolonged heating of said second electrode, the latter will be deflected laterally out of the path of movement of said first electrode, thereby rendering said first electrode inoperative to short circuit said gap and the latter will be maintained until the circuit to said glow discharge switch is interrupted.

2,452,512
FILING CABINET
Roy E. Wells, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y., a corporation of Massachusetts
Original application October 19, 1944, Serial No. 559,349. Divided and this application April 21, 1945, Serial No. 589,534
1 Claim. (Cl. 45—94)

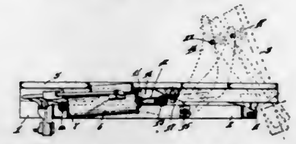
In a filing cabinet, the combination of a housing having a front wall presenting a marginal flat face provided with a large opening and a small opening, a drawer normally housed within said housing and arranged to be projected through said large opening, a lug projecting from said flat face opposite said small opening, a drawer-locking bar normally disposed across said flat face and across said large opening, said bar being provided at one end with a slot which normally receives said lug, said bar extending through said small opening to the interior of said housing and being provided within said housing with laterally projecting lugs to contact the inner face of said wall and to provide a fulcrum about which said bar may be rocked to a position in which it will slide through said small opening into a position away from said large opening, and a channel-bar guide having at its rear end a stop to limit rearward movement of said locking bar in said guide.

2,452,513
GARMENT HANGER
George S. Wilson, Haworth, N. J.
Application October 30, 1945, Serial No. 625,660
5 Claims. (Cl. 223—96)



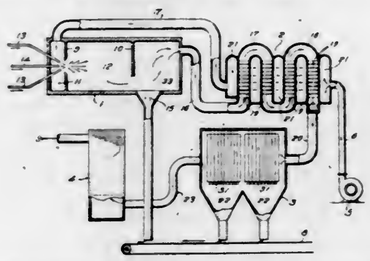
1. A hanger for trousers comprising an upper bar provided with a suspending hook and having at one side thereof an angularly offset downwardly extending portion, and a lower bar pivotally interconnected with the upper bar and having a first portion extending in underlying relationship to the lower edge of said angularly offset portion of the upper bar and a second portion opposite said first portion with respect to the pivotal connection between the two bars, whereby upon insertion of a pair of trousers between the two bars, the major portion of the trouser weight bears on said second portion of the lower bar, and said first portion of the lower bar swings upwardly to clamp the end of the trousers against said lower edge of said angularly offset portion of the upper bar when the hanger is suspended by said hook.

2,452,514
PAPER CLIP
Lech W. S. Zychlinski, Narberth, Pa.
Application April 17, 1946, Serial No. 662,723
1 Claim. (Cl. 24—261)



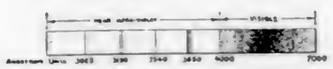
An improved paper clip of a single piece of flexible wire bent in a single plane to form inner and outer parallel U-shaped members of approximately the same length, the legs of the parallel U-shaped members lying closely adjacent one another, the outer U-shaped member having a lateral-extending projection at the bottom thereof for facilitating application of the clip, the portion of the wire forming the lower edge of said projection extending from the nadir of the base of the inner U-shaped member, and the wire from that point to a point where it begins to form the parallel leg portion at the side of the outer U-shaped member remote from said projection following the contour and lying closely adjacent the portion of the base of the inner U-shaped member opposite thereto.

2,452,515
METHOD OF MAKING GEOPHYSICAL EXPLORATIONS
Lawrence F. Athy, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application December 13, 1943, Serial No. 514,061
5 Claims. (Cl. 181—0.5)



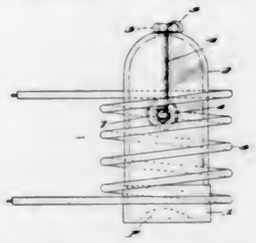
1. The method of determining the nature of subterranean strata which comprises drilling through such strata and thereby creating significantly different physical waves while traversing significantly different strata respectively, translating such physical waves into correspondingly significantly different electrical impulses, and recording such electrical impulses.

2,452,516
BODY TIPPING APPARATUS FOR MOTOR VEHICLES
Perry A. Brick, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation of Ohio
Application April 4, 1945, Serial No. 586,580
5 Claims. (Cl. 298—22)



5. In a vehicle, including a frame having a tiltable body pivotally mounted thereon for swinging the body to a load dumping angle, a pair of relatively spaced companion levers pivotally mounted upon said frame beneath the body for a bearing engagement therewith and directioned for coordinately moving the body, a hydraulic ram disposed between said levers, pivotally mounted on said frame with its movable plunger pivotally connected to said levers for unitary action, a roller, respectively for each of said levers carried by the body providing a translatable tread bearing connection with the lever for moving the body therewith to a tilting position and a coupling element in pivoted link connection with the body, axially of said roller, and in translatable engagement with the lever to anchor the body to the lever in its tilted position.

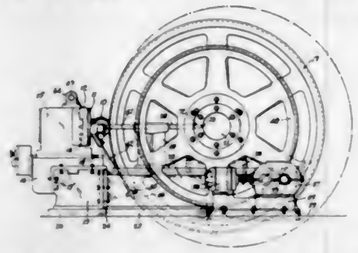
2,452,517
WASTE IRON SULFATE SOLUTION RECOVERY
Harold E. Broughton, New York, N. Y., assignor to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application April 27, 1946, Serial No. 665,352
4 Claims. (Cl. 23—178)



4. A process for the production of an SO_2 containing gas suitable for the manufacture of sulfuric acid by the contact process which comprises burning a finely divided stream of waste sulfuric acid containing hydrocarbonaceous impurities, introducing into said burning material as a finely divided spray a waste solution of iron sulfate, thermally decomposing said waste acid and said iron sulfate at temperatures above 2000° F., allowing a major part of the iron oxide formed by said decomposition to settle out of the gases resulting from said combustion and said thermal decomposition, cooling and removing a major part of the heat in said gases, then removing substantially all of said iron oxide dust from said gases, scrubbing and further cooling said gases with a weak solution of sulfuric acid and recovering a gas containing a minimum of 10% SO_2.

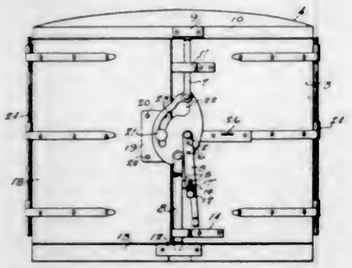
2,452,518
NONACTINIC FLUORESCENT LAMP
Laurence Burns, Swampscott, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application December 18, 1944, Serial No. 568,737
2 Claims. (Cl. 176—122)

1. A fluorescent coating for excitation by a mercury discharge producing 2537 Angstrom units radiation, comprising a combination of the following phosphors in physical contact: calcium silicate, activated conjointly with manganese and lead and emitting visible radiation and also ultraviolet in response to mercury excitation, and one of the phosphors in the following group responding to the ultraviolet emitted by said calcium silicate: uranium-activated calcium fluoride and zinc vanadate.



2,452,519
METHOD OF PREPARING METAL FOR METAL-TO-GLASS SEALS
Charles Daley, West Newton, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1944, Serial No. 556,219
5 Claims. (Cl. 117—106)

1. A process of preparing a copper article for glass seal therewith comprising heating said article to at least a dull red heat and a powder containing equal parts of barium carbonate, boric acid and borax, and continuing the heating sufficiently to vaporize the powder, and forming a coating thereof on the article by applying the vapor to the article in heated condition.

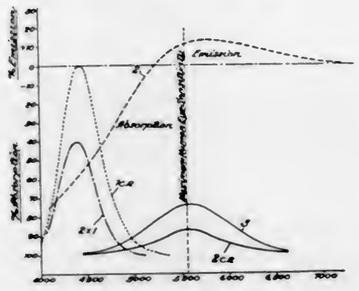


2,452,520
GEAR SHAVING MACHINE
Louis W. Falk, Milwaukee, and Walter P. Schmitter and George P. Maurer, Wauwatosa, Wis., assignors to The Falk Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application July 15, 1944, Serial No. 545,108
4 Claims. (Cl. 90—1.6)

1. In a gear shaving machine the combination of a gear-shaped shaving cutter, a pair of laterally spaced horizontal rails, means for receiving and journalling the shaft of a work gear to support the latter in meshing relation with said cutter, said means being adjustable lengthwise of said rails to accommodate work gears of different sizes, thrust sustaining means including a shaft detachably engageable with the shaft of the work gear to axially position the latter, a carrier for said cutter movable in a direction to cause said cutter to traverse the face of said work gear, and a support for said carrier movable to

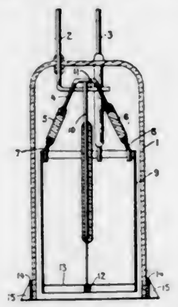
develop a shaving pressure between said cutter and work gear.

2,452,521
LOCKING DEVICE FOR TRUCK AND TRAILER DOORS
William A. Johnson, Smithfield, and Elmer E. Moore, Fort Worth, Tex.; said Johnson assignor to said Moore
Application May 27, 1944, Serial No. 537,636
3 Claims. (Cl. 292—7)



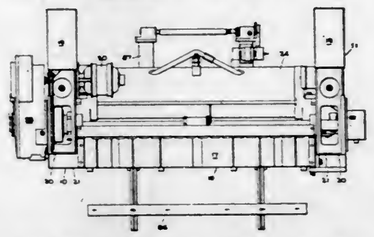
1. In a locking device of the character described comprising, in combination, an eccentrically pivoted locking plate adapted for use in cooperation with a keeper member, an arcuate slot formed in said plate and having a circular portion of greater dimension than said slot formed in one end thereof, the said keeper member having a head embraceable by said circular portion of said slot whereby, the said plate when rotated, provides a locking association with said keeper member.

2,452,522
LUMINESCENT SCREEN AND METHOD OF DEVELOPING LIGHT
Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 18, 1941, Serial No. 383,893
22 Claims. (Cl. 250—164)



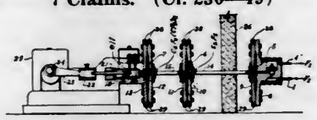
1. A luminescent screen for developing useful phosphorescent light comprising a plurality of inorganic phosphor layers, one of said layers being adapted to be subjected to exciting energy, said layers being arranged in order of their decreasing frequency excitation spectra, the said one layer developing ultra violet light of a higher frequency than the light of the next adjacent layer, the layer most remote from said one layer developing the preponderant portion of useful light and absorbing substantially all of the higher frequency light incident thereon from a preceding layer.

2,452,523
LUMINESCENT SCREEN
Humboldt W. Leverenz, South Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 31, 1941, Serial No. 417,269
4 Claims. (Cl. 250—80)



1. A luminescent screen comprising two phosphor layers, the material of one layer having an emission spectrum in the violet portion of the spectrum and being of relatively large average particle size to render said layer highly light transmitting, the other phosphor layer being of material having an absorption spectrum corresponding to the emission spectra of said one layer, an emission spectra of longer wavelength than that of said one layer and of an average particle size smaller than that of the said one layer.

2,452,524
PROTECTIVE GRID FOR GEIGER-MUELLER TUBES
Herbert Metten, Boston, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application January 2, 1948, Serial No. 93
4 Claims. (Cl. 250—27.5)



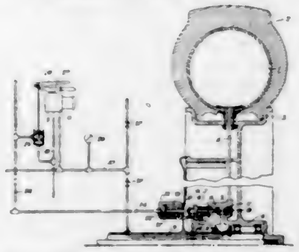
2. A beta ray counter tube comprising an envelope open at one end, a thin metal window sealing said end, a cathode extending toward but spaced from said window, an anode extending toward but spaced from said window, and a grid near said anode in the vicinity of said window and electrically connected to said cathode.

2,452,525
SHEAR
Frederick E. Munschauer, Buffalo, and Joseph P. Wadleck, Kenmore, N. Y., assignors to Niagara Machine & Tool Works, Buffalo, N. Y.
Application May 3, 1945, Serial No. 591,698
15 Claims. (Cl. 164—51)

13. In a machine for shearing metal sheets and the like, a pair of end frame means and a bed extending therebetween including a work table and a stationary shear knife fixed to the rear of said work table, each of said end frame means comprising spaced inner and outer side walls, each of said side walls being formed with a work-receiving gap extending rearwardly of said bed, shaft means extending across the machine above said gaps and having spaced bearing in the inner and outer side walls of each end frame, a reciprocable upper shear knife guided vertically by said end frames above said gaps and a holddown guided for vertical reciprocation toward and away from said work table, drive means fixed to said shaft means in each end frame between said inner and outer bearings and engageable with the upper shear knife for reciprocating the same, and other drive means fixed to said shaft means in each end frame between said inner and outer bearings and engageable with the holddown for reciprocating the same, a driving motor secured exteriorly against the inner side wall of one of said frame means rearwardly of said shaft means with its drive shaft extending into said frame means, a transmission casing disposed exteriorly of the outer side wall of said frame means and having a pinion therein coaxial with and having driving connection with said motor drive shaft, gear means in said transmission casing coaxial with said shaft means and having driving connection with said pinion, and clutch means between said gear means and said shaft means for selectively connecting them for reciprocation of said crosshead and said holddown.

2,452,526
APPARATUS FOR COMPRESSING HIGHLY REACTIVE GASES
Sidney G. Osborne, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
Application February 14, 1946, Serial No. 647,461
7 Claims. (Cl. 230—49)

1. An apparatus for compressing anhydrous gaseous fluorine, comprising a compression chamber; an induction conduit for fluorine communicating therewith; a valve in said conduit adapted to permit inflow to said compression chamber and prevent outflow therefrom; an exit conduit communicating with said compression chamber; a



valve in said exit conduit adapted to permit outflow from said compression chamber and prevent inflow thereto; a diaphragm constituting a wall of said compression chamber, capable of elastic displacement of a volumetric magnitude approximating the volume of said compression chamber; a closed chamber, of which said diaphragm constitutes one wall; a second diaphragm, likewise constituting a wall of said closed chamber, capable of elastic displacement of a volumetric magnitude at least equal to that of said first mentioned diaphragm; and mechanical means for causing reciprocal displacement of said second diaphragm; said closed chamber being substantially completely filled with a liquid fluorination product inert with respect to fluorine.

2,452,527

APPARATUS FOR EFFECTING AND CONTROLLING THE INFLATION OF PNEUMATIC TIRES FOR VEHICLE WHEELS

Leslie Hurst Peter, London, England, assignor, by mesne assignments, to Westinghouse Air Brake Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application January 5, 1945, Serial No. 571,514
In Great Britain January 10, 1944
8 Claims. (Cl. 152—417)

1. The combination with a vehicle wheel having a pneumatic tyre, of valve means mounted on said wheel for controlling the pressure of fluid in said tyre, said valve means comprising a casing having one chamber in constant open communication with said tyre, another chamber in which the pressure of fluid may be varied, and a valve member mounted in said casing for controlling communication between said chambers, said valve member having a normal position in which communication between said chambers is closed and being operable to another position in which communication between said chambers is open, means for operating said valve means comprising a ring member mounted on said wheel being rotatable with said wheel and being shiftable relative to the wheel for effecting the movement of said valve member, and means mounted on a non-rotatable part of the vehicle operative to effect the operation of said ring member.

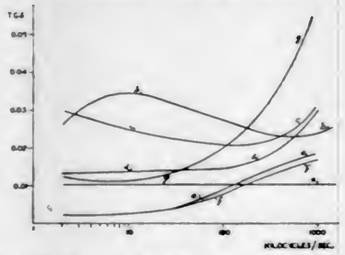
2,452,528

TRUCK REFLECTOR

Charles D. Ryder, Covington, Ky., assignor to The Grote Manufacturing Company, Bellevue, Ky., a corporation of Kentucky

Application August 20, 1945, Serial No. 611,457
2 Claims. (Cl. 248—176)

1. A road signal of the nature disclosed, comprising: a pair of duplicate sheet metal panels, each having a flange extending laterally from a face side providing a rim for the opposite side and top ends of the panel, and brackets of U-shape respectively fixed to the flange at the top end of a panel with the limbs of the brackets pivotally connected in adjoining pairs hingedly joining the panels at their top ends to swing the same to a juxta-position with their rim flanges in edge-wise registry providing an enclosure for light reflecting fixtures mounted upon the inner



face sides of the panels and alternately to erect the panels in a relatively diverging position to station the same upright as a unit upon a surface and expose the light reflecting fixtures respectively from opposite sides of the unit.

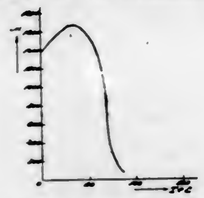
2,452,529

MAGNET CORE

Jacob Louis Snoek, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., trustee

Application September 17, 1945, Serial No. 616,928
In the Netherlands October 24, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 24, 1961
25 Claims. (Cl. 252—62.5)

1. A soft ferromagnetic core material having low magnetic losses in a range of frequencies between 10 kc./sec. and 1000 kc./sec. and which is particularly suited for cores in inductance coils and the like employed in radio circuits operating in the said range of frequencies, consisting essentially of a homogeneous mixed crystal ferrite constituted by a plurality of ferrites, said mixed crystal ferrite having a specific resistance greater than about 1000 ohm-cm. and having an oxygen content at which the coefficient of losses $tg\ \delta$ thereof in the range of frequencies between about 10 kc./sec. and about 1000 kc./sec. is less than about 0.06.



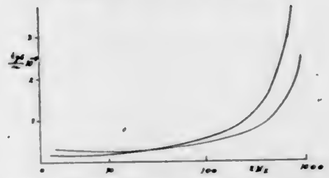
2,452,530

MAGNETIC CORE

Jacob Louis Snoek, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee

Application September 19, 1945, Serial No. 617,392
In the Netherlands May 15, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 15, 1963
19 Claims. (Cl. 252—62.5)

1. A soft ferromagnetic core material having a high magnetic permeability and low magnetic losses consisting essentially of a cubic homogeneous mixed crystal ferrite constituted by a plu-



rality of ferrites, said mixed crystal ferrite having a Curie point between about 40° and 250° C. and having an initial permeability of about 600.

2,452,531

PROCESS OF MANUFACTURING A MAGNETIC MATERIAL AND MAGNETIC CORE

Jacob Louis Snoek, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee

Application September 19, 1945, Serial No. 617,393
In the Netherlands May 31, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 31, 1963
19 Claims. (Cl. 252—62.5)

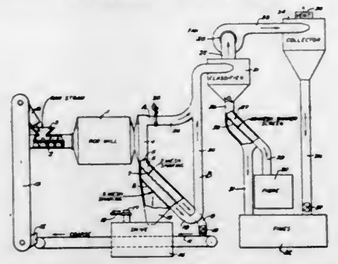
1. A soft ferromagnetic core material having low magnetic losses in a frequency range between 10 kc./sec. and 100 kc./sec. and increasing magnetic losses above 100 kc./sec. and which is particularly suited for cores, inductance coils and the like employed in telephony and telegraphy circuits operating within said range of frequencies, consisting essentially of a cubic homogeneous mixed crystal ferrite constituted by a plurality of ferrites, said mixed crystal ferrite having a specific resistivity greater than about 1000 ohm-cm. and having an oxygen content at which the coefficient of losses $tg\delta$ thereof is less than about 0.06 in the range of frequencies between about 10 kc./sec. and 100 kc./sec. and greater than 0.06 at a frequency between about 100 kc./sec. and about 1000 kc./sec.

2,452,532

HIGH DIELECTRIC MATERIAL

Eugene Wainer, Niagara Falls, N. Y., assignor to The Titanium Alloy Manufacturing Company, New York, N. Y., a corporation of Maine

No Drawing. Application November 2, 1943, Serial No. 508,744
8 Claims. (Cl. 106—39)



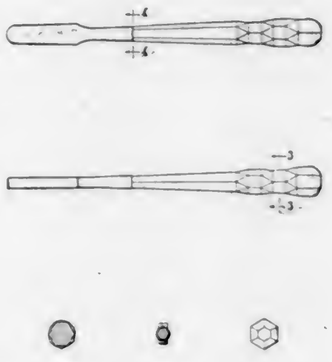
1. A dielectric composition comprising an alkaline earth titanate, an alkaline earth stannate and and an alkaline earth zirconate.

2,452,533

PREPARATION OF PAPER-MAKING FIBER AND OTHER USEFUL MATERIALS FROM STRAW

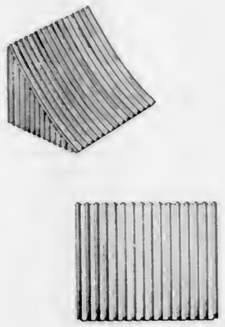
Sidney D. Wells, Combined Locks, Wis., assignor to The Institute of Paper Chemistry, Appleton, Wis., a corporation of Wisconsin

Application June 30, 1944, Serial No. 542,987
5 Claims. (Cl. 19—5)



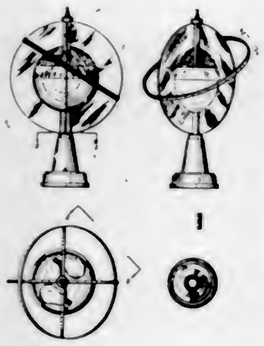
1. The improved method of obtaining a selected useful fiber from a flax straw which comprises the steps of fracturing the bond between the straw fiber and shive so as to produce a mixture of relatively large particles of shive, relatively smaller and lighter particles of shive, the selected fiber in various lengths, and dust, separating the large particles of shive from the selected fiber and the other constituents of the said mixture by passing the mixture over a screen while subjecting the mixture to a counter current of air of such intensity that the large particles of shive are able to pass through the screen by gravity, whereas the fine particles of fiber, the fine shive particles, and the dust are restrained from passing through the screen, and subsequently separating the selected fiber from the material which is restrained from passing through said screen by a process which includes a second screening operation.

DESIGNS



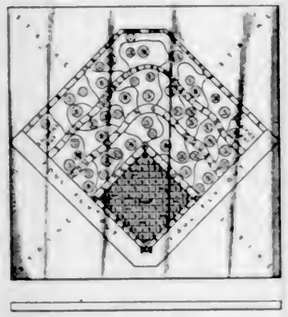
OCTOBER 26, 1948

151,483
DESIGN FOR A TOOTHBRUSH HANDLE
William F. Alderson, Toledo, Ohio, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application June 10, 1947, Serial No. 139,569
Term of patent 3½ years
(Cl. D9—2)



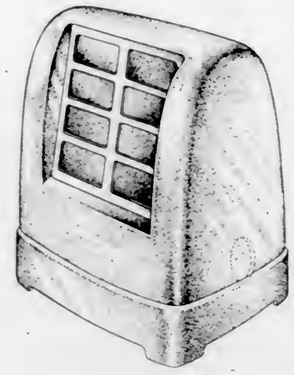
The ornamental design for a toothbrush handle, substantially as shown.

151,484
DESIGN FOR AN AWNING OR THE LIKE
Willis C. Allison, Wichita Falls, Tex.
Application December 5, 1946, Serial No. 135,274
Term of patent 14 years
(Cl. D21—6)



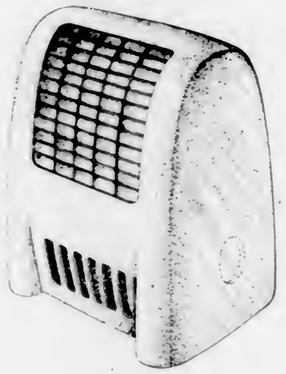
The ornamental design for an awning or the like, substantially as shown.

151,485
DESIGN FOR A LAMP
Max Aronek, Altadena, Calif.
Application May 26, 1947, Serial No. 139,276
Term of patent 7 years
(Cl. D48—20)



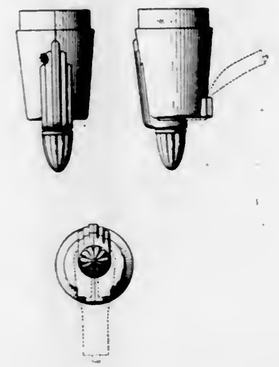
The ornamental design for a lamp, as shown.

151,486
DESIGN FOR A GAME BOARD
William G. Batchelder, Omaha, Nebr.
Application February 24, 1947, Serial No. 137,111
Term of patent 14 years
(Cl. D34—5)



The ornamental design for a game board, as shown.

151,487
DESIGN FOR A SPACE HEATER CASING
Carl G. Bjorncrantz, Evanston, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application October 24, 1947, Serial No. 142,126
Term of patent 7 years
(Cl. D81—10)



The ornamental design for a space heater casing, substantially as shown and described.

151,488
DESIGN FOR A SPACE HEATER CASING
Carl G. Bjorncrantz, Evanston, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application October 24, 1947, Serial No. 142,127
Term of patent 7 years
(Cl. D81—10)

The ornamental design for a space heater casing, substantially as shown and described.

151,489
DESIGN FOR A COMBINED BRACKET LAMP SOCKET AND CONTROL SWITCH
Charles Forest Bookman, Jr., University Heights, and Zia H. Jammé, Cleveland, Ohio, assignors to Railley Corporation, Cleveland, Ohio, a corporation of Ohio
Application May 3, 1946, Serial No. 129,267
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a combined bracket lamp socket and control switch, substantially as shown and described.

151,490
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,364
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,491
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,365
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

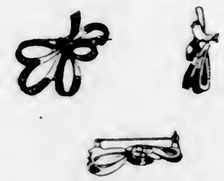
151,492
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,366
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,493
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,368
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,494
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application December 26, 1947, Serial No. 143,369
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, as shown.

151,495
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,472
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

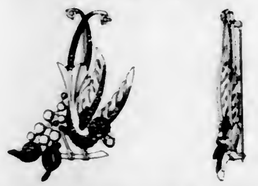
151,496
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,475
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,497
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,476
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,498
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,477
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, as shown.

151,499
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,479
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a necklace or similar article, as shown.

151,500
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,480
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,501
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,481
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,502
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,482
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

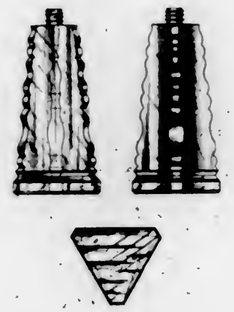
151,503
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,484
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, as shown.

151,504
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,485
Term of patent 3½ years
(Cl. D45—19)

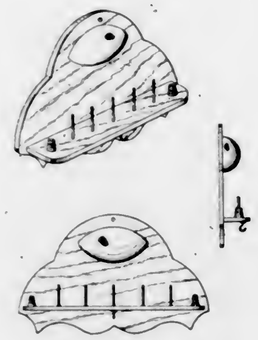
The ornamental design for a brooch or similar article, as shown.

151,505
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,486
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, as shown.

151,506
DESIGN FOR A SUIT
Sidney Cohen, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,214
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a suit, substantially as shown and described.

151,507
DESIGN FOR A BOTTLE
Laurence J. Colwell, New York, N. Y., assignor to Charles of The Ritz, Inc., New York, N. Y., a corporation of Delaware
Application March 18, 1947, Serial No. 137,692
Term of patent 14 years
(Cl. D58—6)

The ornamental design for a bottle, substantially as shown.

151,508
DESIGN FOR A SEWING RACK
James V. Dente, Staten Island, N. Y.
Application January 17, 1947, Serial No. 136,203
Term of patent 7 years
(Cl. D3—19)

The ornamental design for a sewing rack, as shown.

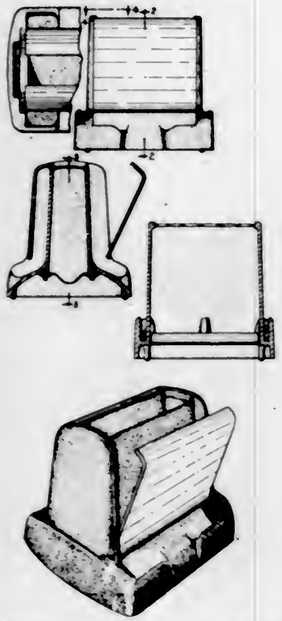
151,509
DESIGN FOR AN EXPANSIBLE LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Emil E. Fachon, Edgewood, R. I., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application August 14, 1947, Serial No. 140,855
Term of patent 7 years
(Cl. D45—4)

The ornamental design for an expansible link chain for a bracelet or similar article, as shown.

151,510
DESIGN FOR AN EXPANSIBLE LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Emil E. Fachon, Edgewood, R. I., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application May 26, 1948, Serial No. 146,605
Term of patent 7 years
(Cl. D45—4)

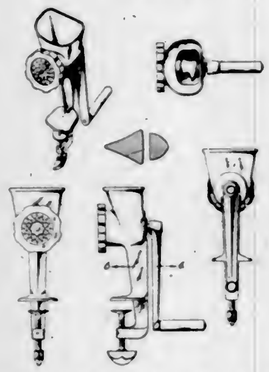
The ornamental design for an expansible link chain for a bracelet or similar article, as shown and described.

151,511
DESIGN FOR A CREAM PITCHER OR SIMILAR ARTICLE
Nettie E. Graven, Wooster, Ohio
Application November 12, 1947, Serial No. 142,470
Term of patent 14 years
(Cl. D44—21)



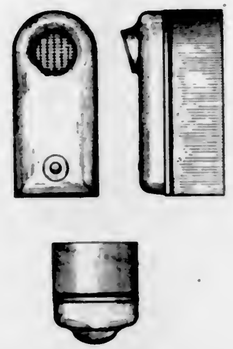
The ornamental design for a cream pitcher or similar article, substantially as shown and described.

151,512
DESIGN FOR A BEAD COLLAR OR SIMILAR ARTICLE
Jean Harber, Weehawken, N. J., now by change of name Jean Harber Goldstein
Application April 2, 1945, Serial No. 118,818
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a bead collar or similar article, as shown and described.

151,513
DESIGN FOR A COMBINED CIGAR, CIGARETTE, AND MATCH HOLDER
Fred J. Hayman, Forest Hills, N. Y.
Application October 28, 1946, Serial No. 134,342
Term of patent 3½ years
(Cl. D85—2)

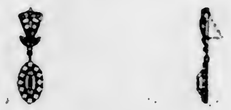


The ornamental design for a combined cigar, cigarette, and match holder, substantially as shown.

151,514
DESIGN FOR A FOOD CHOPPER
Frederick P. Hess and Herbert A. Wormeck, Philadelphia, Pa., assignors to The Enterprise Manufacturing Co., Philadelphia, Pa., a corporation of Pennsylvania
Application January 7, 1948, Serial No. 143,584
Term of patent 14 years
(Cl. D89—1)

The ornamental design for a food chopper, substantially as shown.

151,515
DESIGN FOR AN ELECTRIC DRIER CASING
Elmer S. Hewitt, Wilmette, Ill., assignor to Electric-Aire Engineering Corporation, Chicago, Ill., a corporation of Illinois
Application January 14, 1948, Serial No. 143,744
Term of patent 7 years
(Cl. D4—3)



The ornamental design for an electric drier casing, as shown.

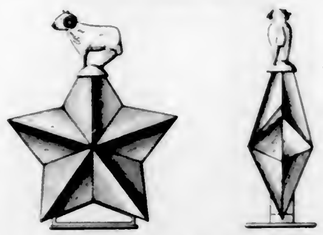
151,516
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,227
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,517
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 25, 1948, Serial No. 147,200
Term of patent 7 years
(Cl. D45—9)

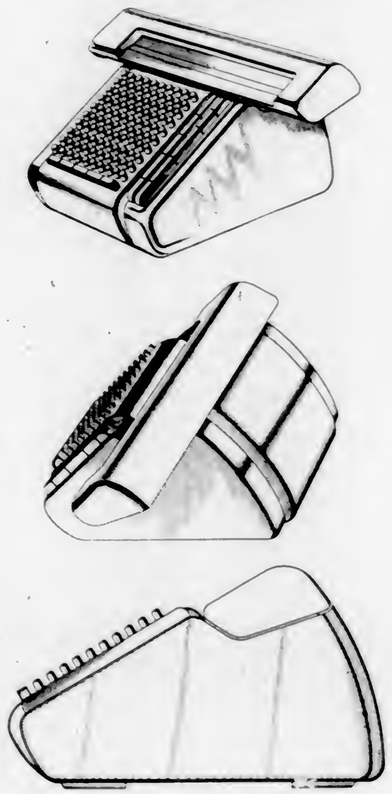
The ornamental design for an earring or similar article, substantially as shown.

151,518
DESIGN FOR AN APRON
Marie J. Kraft, Three Oaks, Mich., assignor to The Warren Featherbone Co., Three Oaks, Mich., a corporation of Michigan
Application September 24, 1947, Serial No. 141,557
Term of patent 14 years
(Cl. D3—26)



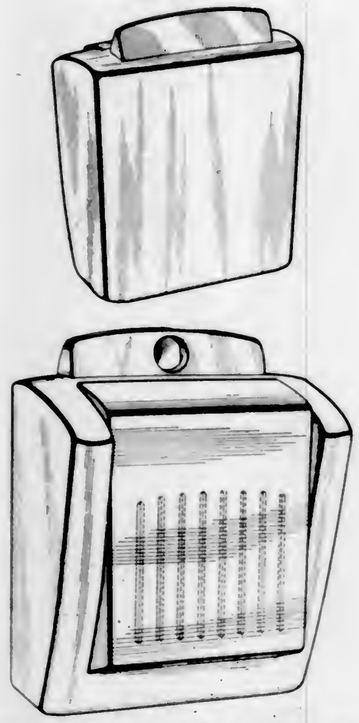
The ornamental design for an apron, substantially as shown.

151,519
DESIGN FOR A SHOE SOLE
Harry Laybolt, Brockton, Mass.
Application July 22, 1948, Serial No. 147,721
Term of patent 14 years
(Cl. D7—5)



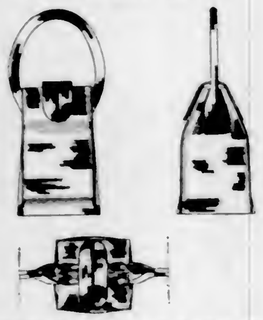
The ornamental design for a shoe sole, as shown and described.

151,520
DESIGN FOR A PERFUME BOTTLE
Jerusha K. Liello, New York, N. Y.
Application September 27, 1946, Serial No. 133,606
Term of patent 7 years
(Cl. D58—6)



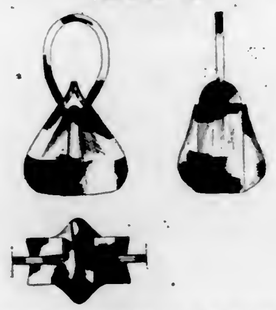
The ornamental design for a perfume bottle, as shown.

151,521
DESIGN FOR A CALCULATING MACHINE
Anthony B. Machado, San Leandro, Calif., assignor to Friden Calculating Machine Co., Inc., a corporation of California
Application June 3, 1946, Serial No. 130,364
Term of patent 14 years
(Cl. D64—11)



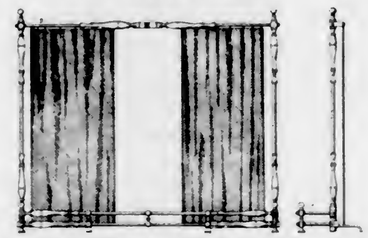
The ornamental design for a calculating machine, as shown.

151,522
DESIGN FOR A REMOTE CONTROLLER CASING
Lockwood Martling, Jr., Chicago, Ill., assignor to Lloyd J. Andres, Itasca, Ill.
Application May 24, 1947, Serial No. 139,267
Term of patent 7 years
(Cl. D26—5)



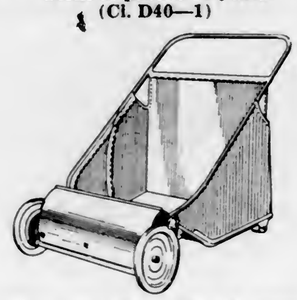
The ornamental design for a remote controller casing, substantially as shown and described.

151,523
DESIGN FOR A HANDBAG
Leon E. Meadow, New York, N. Y.
Application March 25, 1948, Serial No. 145,333
Term of patent 3½ years
(Cl. D87—3)



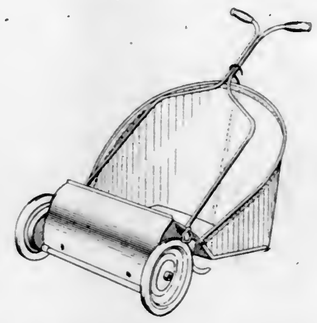
The ornamental design for a handbag, substantially as shown, and described.

151,524
DESIGN FOR A HANDBAG
Leon E. Meadow, New York, N. Y.
Application April 2, 1948, Serial No. 145,491
Term of patent 3½ years
(Cl. D87—3)



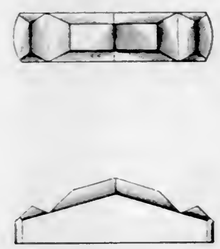
The ornamental design for a handbag, substantially as shown and described.

151,525
DESIGN FOR A COMBINED FIREPLACE SCREEN AND FENDER
Harold C. Packard, Portland, Oreg.
Application February 1, 1947, Serial No. 136,608
Term of patent 3½ years
(Cl. D81—5)



The ornamental design for a combined fireplace screen and fender, as shown.

151,526
DESIGN FOR A LAWN SWEEPER
Edwin D. Parker, Springfield, Ohio, assignor to The Parker Pattern and Foundry Company, Springfield, Ohio, a corporation of Ohio
Application January 8, 1947, Serial No. 135,994
Term of patent 14 years
(Cl. D40—1)



The ornamental design for a lawn sweeper, as shown.

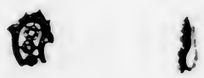
151,527
DESIGN FOR A LAWN SWEEPER
Edwin D. Parker, Springfield, Ohio, assignor to The Parker Pattern and Foundry Company, Springfield, Ohio, a corporation of Ohio
Application January 8, 1947, Serial No. 135,995
Term of patent 14 years
(Cl. D40—1)

The ornamental design for a lawn sweeper, as shown.

151,528
DESIGN FOR A JEWELRY COMPONENT
Benjamin Patek, Bronx, N. Y.
Application May 22, 1948, Serial No. 146,542
Term of patent 3½ years
(Cl. D45—1)

The ornamental design for a jewelry component, as shown.

151,529
DESIGN FOR A COMBINED BROOCH AND WATCH
Oreste Pennino, New York, N. Y.
Application February 12, 1948, Serial No. 144,447
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a combined brooch and watch, substantially as shown.

151,530
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application April 5, 1948, Serial No. 145,547
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,531
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,181
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,532
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,182
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

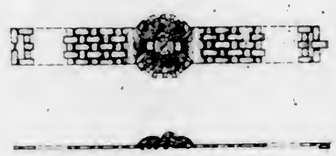
151,533
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,183
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,534
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,184
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,535
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,185
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,536
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,186
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

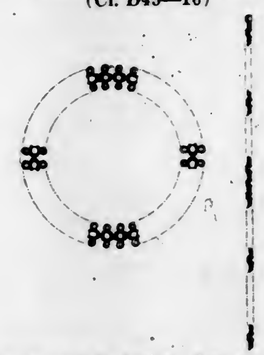
151,537
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,187
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

151,538
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 5, 1948, Serial No. 146,189
Term of patent 7 years
(Cl. D45—19)

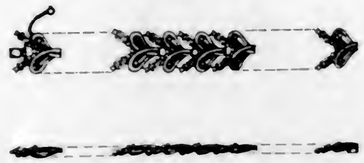
The ornamental design for a brooch or similar article, substantially as shown.

151,539
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,241
Term of patent 7 years
(Cl. D45—9)



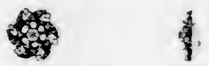
The ornamental design for an earring or similar article, substantially as shown.

151,540
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,242
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,541
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,243
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,542
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,244
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

151,543
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 25, 1948, Serial No. 146,575
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

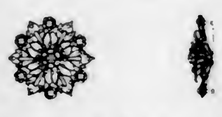
151,544
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 25, 1948, Serial No. 146,576
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,545
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 25, 1948, Serial No. 146,577
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,546
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application May 28, 1948, Serial No. 146,671
Term of patent 7 years
(Cl. D45—4)

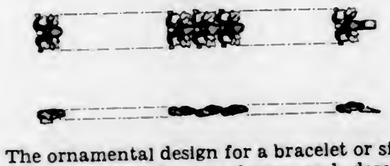


The ornamental design for a bracelet or similar article, substantially as shown.

151,547
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 19, 1948, Serial No. 147,075
Term of patent 7 years
(Cl. D45—9)

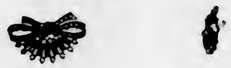
The ornamental design for an earring or similar article, substantially as shown.

151,548
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 19, 1948, Serial No. 147,076
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,549
DESIGN FOR A PIN CLIP OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 19, 1948, Serial No. 147,077
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a pin clip or similar article, substantially as shown.

151,550
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 29, 1948, Serial No. 147,262
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

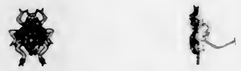
151,551
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 29, 1948, Serial No. 147,263
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,552
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 29, 1948, Serial No. 147,264
Term of patent 7 years
(Cl. D45—19)

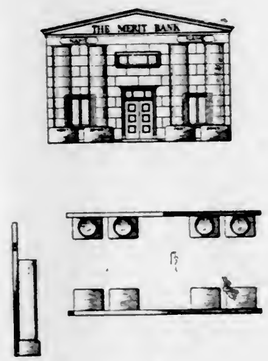
The ornamental design for a brooch or similar article, substantially as shown.

151,553
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 29, 1948, Serial No. 147,266
Term of patent 7 years
(Cl. D45—19)



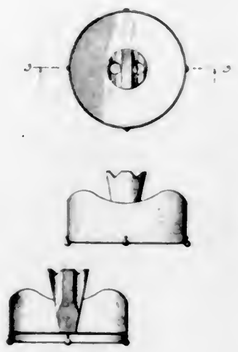
The ornamental design for a brooch or similar article, substantially as shown.

151,554
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application June 29, 1948, Serial No. 147,267
Term of patent 7 years
(Cl. D45—19)



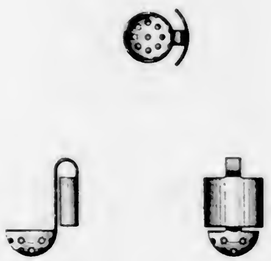
The ornamental design for a brooch or similar article, substantially as shown.

151,555
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 2, 1948, Serial No. 147,878
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,556
DESIGN FOR A SAVINGS BANK
Andrew Quackenbush, Clifton, N. J.
Application January 10, 1947, Serial No. 136,030
Term of patent 3½ years
(Cl. D34—11)

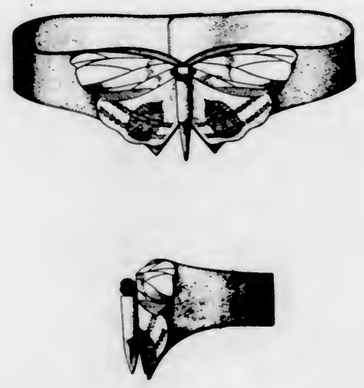


The ornamental design for a savings bank, as shown.

151,557
DESIGN FOR AN ASH TRAY
Russell W. Raine and George T. Derby, Jacksonville, Fla.
Application September 27, 1946, Serial No. 133,608
Term of patent 7 years
(Cl. D85—2)

The ornamental design for an ash tray, substantially as shown.

151,558
DESIGN FOR A SMOKING PIPE ATTACHMENT
Lewis W. Russi, Denver, Colo.
Application September 20, 1946, Serial No. 133,442
Term of patent 3½ years
(Cl. D85—8)

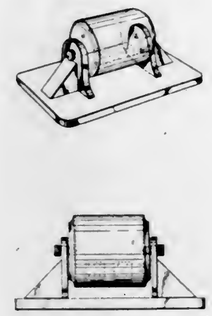


The ornamental design for a smoking pipe attachment, as shown.

151,559
DESIGN FOR A BUILDING
Herbert W. Sachs, Washington, D. C.
Application November 27, 1946, Serial No. 135,128
Term of patent 3½ years
(Cl. D13—1.2)

The ornamental design for a building, as shown.

151,560
DESIGN FOR A BELT
Dorris M. Scott and Evelyn Steinberg, Los Angeles, Calif., assignors to Anita-Gay Creations, Inc., Los Angeles, Calif., a corporation of California
Application February 26, 1947, Serial No. 137,174
Term of patent 14 years
(Cl. D3—10)



The ornamental design for a belt, as shown.

151,561
DESIGN FOR A LAMP
Andrew Sommerville, Pasadena, Calif.
Application February 8, 1947, Serial No. 136,792
Term of patent 14 years
(Cl. D48—20)

The ornamental design for a lamp, as shown.

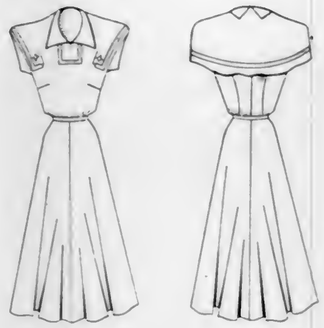
151,562
DESIGN FOR A DICE GAME DEVICE
Ernest E. Southwell, Vallejo, Calif., assignor of one-half to Carl Klotz, Santa Rosa, Calif.
Application February 16, 1946, Serial No. 126,622
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a dice game device, substantially as shown.

151,563
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,753
Term of patent 3½ years
(Cl. D3—26)

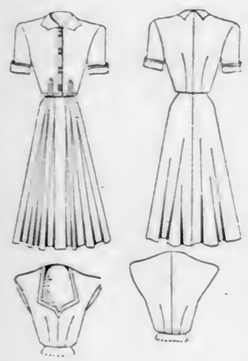
The ornamental design for a dress, substantially as shown.

151,564
DESIGN FOR A DRESS ENSEMBLE
John F. Strassner, New York, N. Y.
Application January 15, 1948, Serial No. 143,757
Term of patent 3½ years
(Cl. D3—26)



The ornamental design for a dress ensemble, substantially as shown.

151,565
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,348
Term of patent 3½ years
(Cl. D3—26)

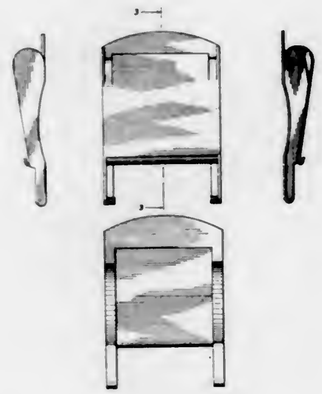


The ornamental design for a dress, substantially as shown.

151,566
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,356
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,567
DESIGN FOR A DRESS ENSEMBLE
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,359
Term of patent 3½ years
(Cl. D3—26)

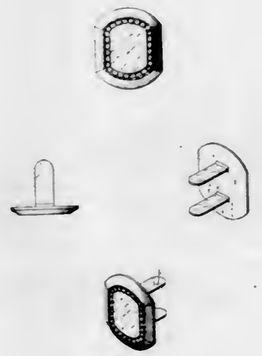


The ornamental design for a dress ensemble, substantially as shown.

151,568
DESIGN FOR A DRESS
John F. Strassner, New York, N. Y.
Application March 26, 1948, Serial No. 145,362
Term of patent 3½ years
(Cl. D3—26)

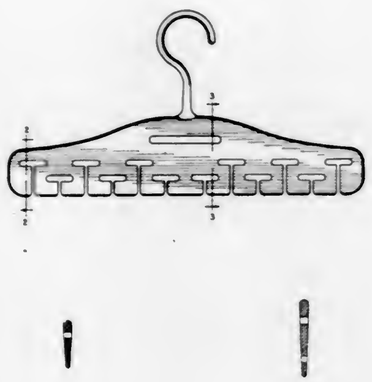
The ornamental design for a dress, substantially as shown.

151,569
DESIGN FOR A MATCH BOOK HOLDER
John H. Sutton, Los Angeles, Calif.
Application January 3, 1947, Serial No. 135,916
Term of patent 14 years
(Cl. D48—29)



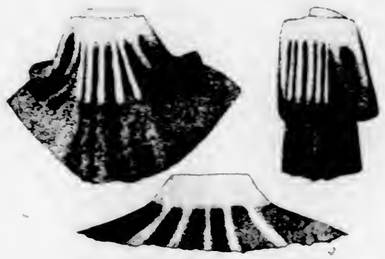
The ornamental design for a match book holder, substantially as shown.

151,570
DESIGN FOR A PALATE PLATE BRUSH
Robert Frederick Taylor, Hounslow, England, assignor to G. B. Kent & Sons, Limited, London, England
Application July 18, 1947, Serial No. 140,375
In Great Britain March 11, 1946
Section 1, Public Law 690, August 8, 1946
Term of patent 14 years
(Cl. D9—2)



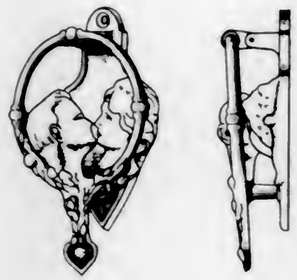
The ornamental design for a palate plate brush, substantially as shown.

151,571
DESIGN FOR A DUMMY PLUG FOR ELECTRIC OUTLETS
George H. Tillinghast, Burlington, N. J.
Application July 31, 1946, Serial No. 132,149
Term of patent 14 years
(Cl. D26—1)



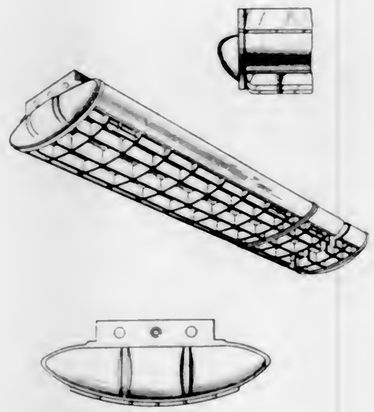
The ornamental design for a dummy plug for electric outlets, as shown.

151,572
DESIGN FOR A TIE RACK OR SIMILAR ARTICLE
Harry A. Tomarin, Cincinnati, Ohio
Application October 19, 1946, Serial No. 134,103
Term of patent 14 years
(Cl. D33—8)



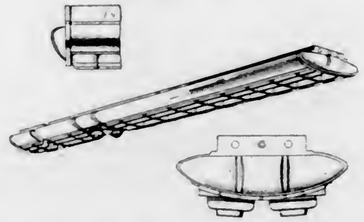
The ornamental design for a tie rack or similar article, as shown.

151,573
DESIGN FOR A FUR COAT
Joseph Weckstein, New York, N. Y.
Application June 11, 1947, Serial No. 139,586
Term of patent 14 years
(Cl. D3—4)



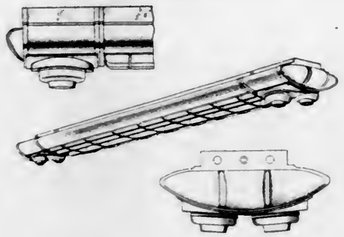
The ornamental design for a fur coat, substantially as shown and described.

151,574
DESIGN FOR A DOOR KNOCKER
John F. Williams, Hingham, Mass.
Application November 6, 1946, Serial No. 134,544
Term of patent 14 years
(Cl. D10—7)



The ornamental design for a door knocker, as shown.

151,575
DESIGN FOR A LUMINAIRE
Frederic C. Winkler and Burton A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application April 27, 1946, Serial No. 129,005
Term of patent 14 years
(Cl. D48—23)



The ornamental design for a luminaire, substantially as shown and described.

151,576
DESIGN FOR A LUMINAIRE
Frederic C. Winkler and Burton A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application April 27, 1946, Serial No. 129,006
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a luminaire, substantially as shown and described.

151,577
DESIGN FOR A LUMINAIRE
Frederic C. Winkler and Burton A. Wyman, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application April 27, 1946, Serial No. 129,007
Term of patent 14 years
(Cl. D48—23)

The ornamental design for a luminaire, substantially as shown.
